The second instance occurred eleven years ago, when some of the undergraduates destroyed some valuable statuary in the library. Here the writer states that the Dean first announced that criminal proceedings would be taken, and then, on discovering that the offenders were "highly connected," found himself "converted to the opinion that mercy is preferable to stern justice, and charity to the strict letter of the law." The facts are that the punishment awarded to the offenders was deliberated on and determined on by the Governing Body, consisting of the Dean, the Canons, and some twenty senior students; that their deliberations, in which I took part, were most assuredly in no way affected by any thoughts of the offenders being "highly connected;" and that, when all was over, we had the satisfaction of seeing ourselves roundly abused in the papers on both sides, and charged with having been too lenient, and also with having been too severe.

The third instance occurred the other night. Some undergraduates were making a disturbance, and the junior censor "made his appearance in person upon the scene of riot," and "was contumeliously handled." Here the only statement of any real importance, the alleged assault by Christ Church men on the junior censor, is untrue. The fact is that nearly all the disturbers were out-College men, and though it is true that the censor was struck by a stone thrown from a window, the unenviable distinction of having thrown it belongs to no member of the House. I doubt if we have one single man here who would be capable of so base and cowardly an act.

The writer then gives us a curious account of the present constitution of the House. The Dean, whom he calls "the right reverend gentleman," is, "in a kind of way, Master of the College." The Canons, "in a vague kind of way, are supposed to control the College." The senior students "dare not call their souls their own," and yet somehow dare "to vent their wrath" on the junior students. His hazy, mental picture of the position of the Canons may be cleared up by explaining to him that the "control" they exercise is neither more nor less than

that of any other six members of the Governing Body. The description of the students I pass over as not admitting any appeal to actual facts.

The truth is, that Christ Church stands convicted of two unpardonable crimes—being great, and having a name. Such a place must always expect to find itself “a wide mark for scorn and jeers”—a target where the little and the nameless may display their skill. Only the other day an M.P., rising to ask a question about Westminster School, went on to speak of Christ Church, and wound up with a fierce attack on the ancient House. Shall we blame him? Do we blame the wanton schoolboy, with a pebble in his hand, all powerless to resist the alluring vastness of a barndoor?

The essence of the article seems to be summed up in the following sentence: “At Christ Church all attempts to preserve order by the usual means have hitherto proved uniformly unsuccessful, and apparently remain equally fruitless.” It is hard for one who, like myself, has lived here most of his life, to believe that this is seriously intended as a description of the place. However, as general statements can only be met by general statements, permit me, as one who has lived here for thirty years and has taught for five and twenty, to say that in my experience order has been the rule, disorder the rare exception; and that, if the writer of your leading article has had an equal amount of experience in any similar place of education, and has found a set of young men more gentlemanly, more orderly, and more pleasant in every way to deal with, than I have found here, I cannot but think him an exceptionally favoured mortal.—Yours,
&c.

Student and Mathematical Lecturer of Christ Church.*

12.19 Oxford Responsions

Source: *Supplement to the Guardian*, February 8, 1882

Sir,

I copy the following from the letter of your Oxford Correspondent, published February 1:

“The results of the certificate examination were less satisfactory than in the previous year. In 1880 certificates were obtained by 475 out of 700 candidates, or 67” (should be 68) “per cent; but in 1881 by only 366 out of 731—i. e., by only 50 per cent. The chief failure seems to have been in elementary mathematics, in which subject 455 candidates out of 692 passed in 1881, as compared with 585 out of 666 in 1880. This being one of the essential subjects for Responsions at Oxford and Part 1 of the Previous Examination at Cambridge, it is not surprising that, while in 1880 362 certificates would have exempted from Responsions and 332 from Part 1 of the Previous Examination, in 1881 the numbers of such certificates were 240 and 239 respectively. Some light is perhaps thrown by these results upon a recent Responsions examination in which more than half the candidates were “plucked.” The assertions made after the publication of the certificate list last summer, that the large proportion of failures was due to a sudden raising of the standard, are disposed of by the statement in this report that the great majority of failures in mathematics were due to ignorance of the first two books of Euclid—in other words, to inadequate preparation, and neglect of the elementary parts of the work by teachers and taught.”

In justice to the writer, I have quoted this passage in full; but the only two points to which I wish to draw attention are—first, the fact that in the Responsions of last term more than half the candidates were “plucked”; secondly, that he offers as a sufficient explanation of this phenomenon the hypothesis that it was due to “inadequate preparation, and neglect of the elementary parts of the work by teachers and taught.” It does not seem to have occurred to him that such neglect, so sudden and so widely spread as his statistics seem to show, would be a phenomenon quite as surprising, and quite as much needing to be accounted for, as the one he disposes of so summarily.

As a teleologist, your correspondent is, perhaps, a trifle too easily satisfied—the kind of man who, on experiencing a sudden sharp pain in the back of his head, and finding himself prostrate on the pavement, would merely remark, while scrambling to his feet—“I have no doubt received a blow from behind”; and so would continue his journey, serenely conscious that all was now fully explained.

As a statistician, it would seem that he has yet much to learn—notably the fact that, when candidates can go in for two examinations and can pass in either but not in both, if he deals (as he does here) with total numbers only, he is counting many of the failures twice, while each success can be counted *only* once.

To get the true percentage of those who passed last term we must ascertain how many candidates there *would* have been and how many of these *would* have passed if the previous examination had not taken place. For the total number of candidates we add together the two lists ($321 + 308 = 629$) and deduct those common to both (81), who would otherwise be counted twice, and also those (55) who appear in the first list but had not matriculated before Responsions

($629 - 81 - 55 = 493$). To get the total number who passed, we add together those who passed in the two lists ($176 + 151 = 327$) and deduct those (15) who passed in the first list but had not matriculated before Responsions ($327 - 15 = 312$). Thus, the true percentage is 63. The average percentage, from Michaelmas, 1873, to Michaelmas, 1881, was 64.

We see, then, that the true answer to the question raised by your correspondent, "How are we to account for this phenomenon?" is simply that there is no phenomenon to be accounted for.

12.20 An Analysis of Responsions Lists

Source: printed 1882

From Michaelmas 1873 to Michaelmas 1881

The unprecedented phenomenon of last Term—when more than half the Candidates for Responsions failed to obtain “testamurs”—was a matter of surprise, not to say of consternation, alike to teachers and to taught. While enquiring into the causes of this apparent catastrophe, I was led to collect and tabulate the statistics of previous Examinations, and the results seem to be of sufficient interest to be printed and circulated. The following Tables, while exonerating the Examiners of last Term from the charge, to which at first sight they appeared liable, of extraordinary severity, yet furnish evidence that on other occasions the standard employed by the Examiners has been liable to violent fluctuations, which has sometimes led to great injustice being unintentionally done to the Candidates. Considering that the Candidates outnumber the Examiners in the ratio of at least 40 to 1, it may be fairly assumed that these fluctuations are due to the varying “personal equations” of the Examiners, rather than to sudden changes in the average quality of the Candidates.

In estimating the percentage who passed in Responsions last Term, it will be necessary to take into consideration the fact that this Examination was, for the first time, preceded by an Examination “in lieu of Responsions,” held by the same Examiners. Hence we have to estimate how many Candidates there *would* have been, and how many of these *would* have passed, if the previous Examinations had not taken place. To get the total number of Candidates, we add together the numbers in the two Lists ($321 + 308 = 629$) and deduct those (81) common to both Lists, who would otherwise be counted twice, and also those (55) who appear in the first List but had not matriculated before the Responcion-List was drawn up ($629 - 81 - 55 = 493$): thus the total number is 493. To get the total number of those who passed, we add together those who passed in the two Lists ($176 + 151 = 327$), and deduct those (15) who passed in the first List but had not matriculated before the Responcion-List was drawn up: the remainder is 312. Thus the real percentage who passed is 63.

The Analysis begins with Michaelmas 1873, as that was the first occasion when a List was published of those “*qui quaestionibus Magistrorum Scholarum in Parviso pro forma responderunt.*” I have made separate Tables for the three Terms, because they seem to be governed by different laws—the Michaelmas Term yielding the highest percentage of Candidates who passed, and the Act Term the lowest. These phenomena are probably due to the number of Honourmen who began to reside in October, and to the exceptional temptations to idleness afforded by the Summer Term.

Further, I have tabulated separately the two halves into which the List is always divided for *viva voce* (each half being under 3 only of the 6 Examiners), because I observe that the percentage of those who pass sometimes differs widely in the two halves of the same List.

These Tables give a grand total of 4474 who have passed, out of 6952 Candidates, i. e. an average percentage of 64.

Wherever the percentage on the “whole List” for some one Examination differs much from the general percentage on the Table in which it occurs, while

the two halves of the List yield nearly equal percentages, it seems fair to conclude that all 6 Examiners were using too high or too low a standard, so that probably the *papers* were too hard or too easy: e. g. they were probably too hard in Hilary 1874, Act 1874, and Michaelmas 1874, and too easy in Act 1877, Hilary 1878, and in the entirely abnormal Examination of Michaelmas 1879.

Wherever the percentage on the two halves of a List differ much from each other, it is probable that, in the *viva voce* Examination, 3 of the Examiners were using a different standard from the other 3. Instances may be noted in Hilary 1877, Act 1878, Michaelmas 1878, and Act 1879.

12.21 Twelve Months in a Curatorship

Source: Twelve Months in a Curatorship

By One Who Has Tried It

Preface

This book is *not* a plagiarism—as its name might at first suggest—of “Five Years in Penal Servitude.” Nor, again, is it meant to traverse precisely the same ground as “Six Months on the Treadmill”. There is a *general* resemblance, no doubt, to both the above works: still, it may be claimed for the present memoir, that it deals with *some* phases of humanity not hitherto analyzed, and narrates *some* woes that are peculiarly its own.

An apology is needed for its great length: but I have not had time to condense it into smaller compass.

Quoted from *Five years' penal servitude, by one who has endured it 1877*

Quoted from *Desperate Remedies* by Thomas Hardy

1. Of Crimes

“Habemus confitentem reum.”

Quoted from *Pro Ligario 2* by Cicero

The record, which I here propose to lay before the members of Ch. Ch. Common Room, of my first—not improbably my last—year in the office to which they have done me the honour of electing me, will be found largely autobiographical (a euphemism for “egotistic”), slightly apologetic, cautiously retrospective, and boldly prophetic: it will be at once financial, carbonaceous, aesthetic, chalybeate, literary, and alcoholic: it will be pervaded with mystery, and spiced with hints of thrilling plots and deeds of darkness: in short, it will contain, as I believe, something to suit all tastes, but nothing, I sincerely trust, that can reasonably offend any.

Perhaps, as the crimes are my own, I had better take them to begin with, and so work on to something more pleasant. Would Common Room, then, “be surprised to hear” (to recur to the old “Tichbourne” formula) that I have been breaking the rules, supposed to exist for the guidance of the Curator, with all the *abandon* of a bull, when critically inspecting a collection of old Dresden China? I meant of course the *letter* of the rules, for to the *spirit* of our constitution I trust I have been, and ever shall be, loyal. To put the matter briefly, my simple wish is to do what is most for the interest of C.R.; and where their interests clash with the letter of any rule, I take the responsibility of breaking the rule.

Let me illustrate my meaning.

There are certain monthly magazines taken in—the (miscalled) *Fortnightly*, *the Contemporary*, *the Nineteenth Century*, and *the National Review*. When these were voted for (all but the last, which I added on my own responsibility), nothing was said as to *continuity*: presumably, they were to be taken in right through the year. But, being in residence, with two or three others, at the beginning of the Long Vacation, it occurred to me, “We are all going down. For the next three months these magazines will come in, and will find no one to read them. Could I not save C.R. a few shillings by conterminating them till next Term? And then, if there *is* any one (which seems unlikely) anxious to read the

Quoted from an often quoted phrase made by the Solicitor-General in the Tichborne Case

back numbers, I can easily get them.” Accordingly, I asked those who were then residing if they wanted any of the numbers for the new month: one number was asked for, and that I procured. And, when the Term began again, I had only one complaint made on the subject: but as the complaint did not seem at all to wish to read the omitted numbers, but merely bewailed the breach of the rule *because it was a rule*, I exercised a masterly inactivity. *Moderate* Conservatism always commands my respect: but a Conservatism that demands a rigid adherence to the *letter* of the constitution—no reasoning process being permitted, nor any attempt to “correspond with the environment”—this is something I cannot sympathise with nor even understand.

Let us take another instance. One of the rules, affecting Honorary Members of C.R., is that they may not have wine from the cellars, except for use in C.R. It seemed to me hardly to meet the case of the two newly-elected “non-official” Students: and I have taken the responsibility of dispensing with the rule in their case. The ultra-Conservatives may perhaps lament the broken *letter* of the law: but I trust the majority of C.R. will acquit me of having acted unreasonably, or disloyally, towards the *spirit* of the constitution.

A third instance will be found in the Rules of the Wine Committee, which have fared but badly at my hands: “compound and comminuted fracture” is the scientific term, I believe, for the process I have put them through: but this matter is too awful to be dealt with here: it must have a section to itself.

So far, then, I present myself as an old and hardened criminal, glorying in his misdeeds. Let us try a pleasanter theme.

2. Of Finance

“Quocunque modo, rem.”

Quoted from *Ep. 1*
by Horace

At the audit of Dec. 1882, the balance in favour of C.R. was declared to be £547 15s. 4d.: in Dec. 1883, it was £37 11s. 3d.; leaving a difference of £510 4s. 1d. to be accounted for.

Now, firstly, the C.R. Bills for Mich. Term, 1883, amounting to £90 6s. 10d., had not been paid in: secondly, the total amount of C.R. bills for the year has been £143 7s. 2d. less than in the previous year: thirdly, there was more wine in the cellar in Dec. 1883 than in Dec. 1882, the value of which I have calculated to be £275 5s. 3d. The sum total of these items is £508 19s. 3d.

We see, then, that some of the difference, between the balance just declared and that of a year ago, may be satisfactorily accounted for.

There remains an unexplained deficit of £1 4s. 10d., which I recommend to the attention of the lynx-eyed critics at Tunbridge Wells.

3. Of Wine

“Nunc est bibendum”

Quoted from *Carmen*
1, 37 by Horace

Whether this subject is *quite* the noblest to which Time and Thought can be devoted by Man is a question I leave on one side for the moment. *I*, at any rate, have had to give a much larger amount of both, during this past year, than I have ever given before, or (as I hope) shall ever have to give again.

Here are a few facts, selected from my summaries for the year. Roughly speaking, we had, when the year began, 23,000 bottles in our cellar: we have

added 5,000 during the year, making a total of 28,000. Of these we have consumed about 3,000, leaving 25,000 to go on with, i. e. 2,000 more than we had a year ago, the value of this addition to our stock being about £270. We have now about 700 bottles of old Port (enough for 30 years), and 11,000 ordinary (enough for 20 years). Of best Sherry, 570 (60 years); pale 1,500 (9 years); brown, 6,000 (30 years). Of best Claret, 200 (5 years); dessert Claret, 600 ($1\frac{1}{2}$ years): both these will be largely added to forthwith. Of other wines we have but small stocks, except Rauenthaler, of which we have 900 (enough for 11 years), and Madeira (B), the stock of which may be expected, as we shall see hereafter, to last for much longer time than any I have yet named.

The present Wine-tariff is by no means in a satisfactory state. I have given a good deal of attention to the subject, and will here present the tariff I propose to adopt, as well as by reasons for proposing it.

Before considering the actual Wine-tariff as a whole, I think it will be well to consider, in the abstract, the principles on which a Wine-tariff should be framed: and this we can do with a simple instance quite as well, perhaps even better, than with a complex one. To make my instance something like the truth, I will take old Port and Chablis. Of these our annual consumption is in the ratio of 1 to 3; and the original cost of each is about 3s. a bottle: but the present value of the old Port is about 11s. a bottle. Let us suppose, then, that we have to sell to C.R. one bottle of old Port and 3 of Chablis—the original cost of the whole being 12s., and the present value 20s. These are our data.

We have now two questions to answer. First, what sum shall we ask for the whole? Secondly, how shall we apportion that sum between the two kinds of wine?

To answer the first question, we must consider the two purposes for which we need the money: one is, to replace the wine that has been consumed with an equal amount of new wine of the same quality; the other, to meet the annual expenses which arise from the keeping of wine. For the first purpose it is obvious that the original cost of the wine is the sum required: to settle how much ought to be added to this for current expenses is a more difficult matter, but I think we may take past history as a safe guide, and assume that the addition that has been hitherto made to the original cost is fair. Now the wine consumed last year originally cost £480: its present value is £560: and we sold it for £550: so that, roughly speaking, we sell the wine as a whole for its *present* value—the difference between that and its original value being the sum we require to meet current expenses.

We may assume, then, in the instance before us, that we have to sell these 4 bottles of wine, as a whole, for 20s. And we have now to answer the second question—how much of this is to go for Port and how much for Chablis. We have, as so often happens in the lives of distinguished Premiers, three courses before us:—(1) to charge the *present* value for each kind of wine; (2) to put on a certain percentage to the *original* value of each kind; (3) to make a compromise between these two courses.

Course (1) seems to me perfectly reasonable; but a very plausible objection has been made to it—that it puts a prohibitory price on the valuable wines, and that they would remain unconsumed. This would not, however, involve any loss to our finances: we could obviously realise the enhanced values of the old wines by selling them to outsiders, if the members of C.R. would not buy them. But I do not advocate this course.

Course (2) would lead to charging 5s. a bottle for Port and Chablis alike. The Port-drinker would be “in clover”: while the Chablis-drinker would probably begin getting his wine direct from the merchant instead of from the C.R. cellar, which would be a “*reductio ad absurdum*” of the tariff. Yet I have heard this course advocated, repeatedly, as an abstract principle. “You ought to consider the *original* value only,” I have been told. “You ought to regard the Port-drinker as a private individual, who has laid the wine in for himself, and who ought to have all the advantages of its enhanced value. You cannot fairly ask him for more than what you need to refill the Bins with Port, *plus* the percentage thereon needed to meet the contingent expenses.” I have listened to such arguments, but have never been convinced that the course is just. It seems to me that the 8s. additional value, which the bottle of Port has acquired, is the property of *Common Room*, and that Common Room has the power to give it to whom it chooses: and it does not seem to me fair to give it all to the Port-drinker. What merit is there in preferring Port to Chablis, that could justify our selling the Port-drinker his wine at less than half what he would have to give outside, and charging the Chablis-drinker five-thirds of what he would have to give outside? At all events I, as a Port-drinker, do not wish to absorb the whole advantage, and would gladly share it with the Chablis-drinker. The course I recommend is

Course (3), which is a compromise between (1) and (2), its essential principle being to sell the new wines *above* their value, in order to be able to sell the old *below* their value. And it is clearly desirable, as far as possible, to make the reductions *where they will be felt*, and the additions *where they will not be felt*. Moreover, it seems to me that reduction is most felt where it *goes down to the next round sum*, and an addition in the reverse case, i. e., when it *starts from a round sum*. Thus, if we were to take 2d. off a 5s. 8d. wine, and add it to a 4s. 4d.—thus selling them at 5s. 6d. and 4s. 6d.—the reduction would be welcomed, and the addition unnoticed; and the change would be a popular one. This principle is especially applicable to what I regard as the most important feature of the new tariff, the change in the prices of the Port and Claret drunk at dessert. We are selling the first for 4s. 3d., which is 1s. 9. *below* its value, and the other for 4s. 9d., which is 4d. *above* its value. The annual consumption (500 and 470) is practically the same for these two wines, so that what we take off one price we may fairly put on the other. I propose to lower the first, and raise the second, to the mean value 4s. 6d., which being a round sum, comes under the rule I have laid down as to making perceptible reductions and imperceptible additions. There is also a social consideration which should have weight: it seems to me *most* desirable, when the cost of the wine, drunk during the evening, has to be equally divided among the drinkers, that no one should have cause to think “my neighbour is drinking a dearer wine than I: so that I am practically paying part of his bill.” Some such inequality was complained of, not long ago, by the Claret-drinkers, when the Claret was cheaper than the Port; and a similar complaint might now be made by the Port-drinkers.

The proposed tariff would have brought in the same total amount as the present one, namely £550. The principal changes are as follows:—

Ports, of all kinds, we are selling considerably under their real values. I propose to raise them all a little, but still keeping below the real values.¹

¹Remark: The following wine-table is omitted here, it is a long list with wines, their annual consumption, original cost, current value, present tariff, and proposed tariff.

Dessert Claret I have discussed previously.²

Champagnes and Hocks we are now selling at a profit above what we put on in other cases. I propose to reduce this. The Rauenthaler, of which we have just laid in a large supply on exceptionally favourable terms, is now becoming so popular, that I think the reduction from 3s. 4d. to 3s. (which we can well afford) will be a specially welcome one.

The other changes call for no remark, with the exception of Brandy, which we are at present selling at a profit entirely abnormal. The present price, 7s., was probably fixed by some Draconian Curator, in an age when Brandy-drinking had reached so fearful a pitch that he felt that a desperate remedy was absolutely needed.

One curious phenomenon I wish to call attention to. The consumption of Madeira (B) has been, during the past year, zero. After careful calculation, I estimate that, if this rate of consumption be steadily maintained, our present stock will last us an infinite number of years. And although there may be something monotonous and dreary in the prospect of such vast cycles spent in drinking second-class Madeira, we may yet cheer ourselves with the thought of how economically it can be done.

I have only to add that I shall be happy to receive suggestions from any member of Common Room who will take the trouble to consider the "data" of the problem and to form an opinion on the proposed tariff. And I hope thus to be able to reduce it to a form which C.R. will be prepared to accept at our next meeting.

It may be thought that this matter is one to be settled by the Wine-Committee; but I have come to the opposite conclusion. Even if C.R. intended (which is by no means clear) to include changes in the tariff among the "questions as to sending out wine"³ which it has left to the Wine-Committee to settle, I doubt if it was meant to include changes affecting the finances of C.R. At all events, if the Wine-Committee were to vote a new tariff, which considerably reduced the annual receipts, I should refuse to adopt it: and, if I were asked by what Rule I was authorised to do so, I should point to that which enacts that "no expenditure shall be made without the concurrence of the Curator." Such reduction would clearly be "expenditure," and I should decline to "concur" in such a change until I had assured myself that it was approved of by C.R.

The only changes in the tariff, that I can find recorded for a good many years back, were voted on by C.R. at the annual meeting. The Wine-Committee was no doubt devised for the purpose of doing certain things previously done by the Curator alone, but "I have yet to learn" that it was meant to supersede C.R. in any of its special functions.

4. Of Liqueurs

The following Liqueurs (arranged in order of costliness) can be supplied to Members of C.R. at the prices annexed: they are all to be had in bottles, or in half-bottles. But, since bottles vary as to contents, I append to each the contents in ounces, and the cost per 8-oz. vial. (N.B. These vials have objective existence as yet, but can easily be procured, if wished for.)

²Original has some other phrase.

³See "Rules of the Wine-Committee."

The three marked “a” are kept in stock, and can be had, either in half-bottles, or in a stand of three decanters, the contents of which will be measured before sending out, and on its return, and only the amount consumed will be charged for.

There are only two half-bottles of each of the others in stock: but I will procure more, if an order be given.

The asterisks indicate the degree of goodness, according to the views of a certain Member of the Wine-Committee, who, in the noblest spirit of self-sacrifice, came day after day to taste the samples: in which views I (being one whose opinion on such points is worth absolutely nothing) entirely coincide. * = “very good,” and ** = “specially recommended.”

In connection with Liqueurs, the following sentiments have been put forth:—

(1) On Nov. 12th, I issued a notice, in which, after naming Green Chartreuse, Dry Curaçoa, and Maraschino, as the only Liqueurs “kept in stock,” I added “but I will procure any others for which an order is given.”

(2) The following paper then appeared:

To the Members of C.R. The Curator has just issued a circular about Liqueurs, which is likely to be misleading. Mr. Dodgson as a private person is quite at liberty to “procure” any Liqueurs he pleases for his friends—at his own expense. But in this case the word *Curator*, after his signature, should be expunged. If, however, he writes officially—for the words “I will procure” read “the Wine-Committee may procure”; for the Committee, which *alone* has the power to “procure” Wines, etc. for C.R., has recently decided that the three kinds of Liqueurs now kept in stock are sufficient for the needs of the C.R. at present.

J. Barclay Thompson,

Member of the Wine-Committee.

(3) On Nov. 23rd, I issued a notice, in which I said:

I will procure any, not at present kept in stock, for which an order is given. Such purchases, being made on behalf of individual Members of C.R., and not for the cellar, do not (as has been erroneously stated) form part of the duties of the Wine-Committee. I here append the words of the Rule in which those duties are defined. “There shall be a Wine-Committee, consisting of five persons, including the Curator, whose duty shall be to assist the Curator in the management of the cellar.”

(4) The following paper then appeared:

To The Members of Common Room The Curator has issued another circular, dated November 23, 1883, in which he refers to a recent circular of mine in the following words:—

"Such purchases [purchases of a number of Liqueurs mentioned in a previous paragraph] being made on behalf of individual Members of Common Room, and not for the cellar, do not (*as has been erroneously stated*) form part of the duties of the Wine-Committee."

The Curator thus asserts that I have "erroneously stated" that "purchases . . . made on behalf of individual Members of Common Room, and not for the cellar, form part of the duties of the Wine-Committee."

I have made no such statement. I append the words of my circular, so that Members of Common Room may judge for themselves:—

"The Curator has just issued a circular about Liqueurs, which is likely to mislead. If he writes as a private person, he is, of course, at liberty to procure any Liqueurs he pleases for his friends, *at his own expense*; but in this case the word 'Curator,' after his signature, should be expunged. If he writes officially—for the words 'I will procure' read 'the Wine-Committee *may* procure'; for the Committee (which alone has the power to procure wines for the Common Room cellar) has recently decided that the three kinds of Liqueurs now kept in stock suffice for the present needs of Common Room."

The only statement I have made here about the duties of the Wine-Committee is, that it "alone has the power to procure wines for the Common Room cellar." It is obvious that the sober imagination of the Curator has been morbidly excited by the presence of so large a number of unsold Liqueurs in his rooms.

If, however, I *had* made the statement which the Curator rashly stigmatizes as "erroneous," it would have been quite correct. The Curator has quoted Rule 1. I will quote the two Rules which define the duties of the Committee:—

Rule 1.—"There shall be a Wine-Committee of five persons, including the Curator, whose duty shall be to assist the Curator in the management of the cellar."

Rule 4.—"*All* questions relating to the selection, purchase, keeping, serving, and sending out of wines shall be decided by a majority of the Committee at a *meeting*."

"The management of the cellar," in Rule 1, is explained by Rule 4 to mean "*all* questions relating to the purchase, etc. of wines." The word "cellar" is used to signify wines, etc., *bought out of the funds of the Club*; not merely the rooms under the Common Room, or the wines which are there or are ordered to be placed there. This, too, is the usual meaning of the word "cellar" as employed in Rule 1.

I submit, therefore, that the Curator is breaking the Rules of the Club *if he uses our subscriptions* in making purchases of wine, etc. "on behalf of individual members of Common Room" without the consent of the Committee "at a meeting." Such purchases are not only illegal, but may cause serious inconvenience and even loss to the Club.

I think I have shewn then,—(1) That I have not made the statement, erroneous or otherwise, which the Curator "erroneously" attributes to me. (2) That as *all* purchases of wine, etc., *out of the funds of the Club*, are to be made only by order of the Committee, the Curator has no right to make purchases of wines, etc., "on behalf of individual members of Common Room," if he uses the funds of the Club for that purpose.

It is hardly necessary to add that, if the Curator does not use the funds of the Club for such purchases, neither the Wine-Committee nor any one else has any right to interfere. In this case, too, the Curator will no doubt defray the expenses of printing his printing his private announcements to "individual members of Common Room" out of his own pocket.

J. Barclay Thompson

Postscript The following letter of the Curator, sent to me in reply to a letter of mine, remonstrating with him for ignoring the decision of Committee to purchase certain Liqueurs, will enable members of Common Room to appreciate the attitude of the new Curator towards the Wine-Committee and the Rules of the Club, and his

archaic conception of government according to law.

“I am sorry you do not approve of my having *altered* the order for Liqueurs which was *agreed on at the Wine-Committee meeting*. I can assure you my simple wish is to do what is most for the interest of Common Room. (*e. g.* if I had ordered the 12 Green Chartreuse *agreed on* [unanimously], I fear it would have been wasted money, and that it would not have been consumed.) [The Curator soon overcame this fear, and found that the order of the Committee was the wisest after all,] and where *what seems their interest* clashes with the *letter* of any Rule, *I take the responsibility of breaking the Rule.*”

To this I replied, in substance, that the Club was the best judge of its own interests, and that it had decided unanimously that, in all matters relating to wines, the Committee *as a whole* should be the judge of those interests, and not the Curator, who is the Chairman of the Committee, with a *veto* upon expenditure, but with no other special powers.

5. Of the Wine-Committee

“Four rogues in buckram let drive at me.” Shakespeare.

Quoted from *Henry IV, Part 1* by William Shakespeare

The Wine-Committee was a very simple organism at first—a sort of Amœba, with so brief a Code of Rules, that it was all but structureless; but, as time went on, it developed; and its Rules grew ever more complex and stringent, till they became, in the humble opinion of the present Curator, rather too tight a fit to be altogether comfortable.

I will first give the Rules, and then state the interpretation that I have, in practice, put upon them.

Rules for the Wine-Committee

[Agreed upon, Dec. 8, 1882]

1. There shall be a Wine-Committee, consisting of 5 persons, including the Curator, whose duty shall be to assist the Curator in the management of the Cellar.
2. The members of the Committee, other than the Curator, shall be elected at the annual audit.
3. A meeting of the Committee *shall be held in the second week of each Term*, on a day to be fixed by the Curator, who *shall give notice* of the meeting *in the preceding week*. Other meetings of the Committee may be summoned by the Curator, *a week's notice being given*. The Curator shall summon a meeting of the Committee, when requested to do so by 3 members thereof.
4. *All questions* relating to the selection, purchase, except as hereinafter provided (see Rule 6), keeping, serving, and sending out of wines shall be decided by a majority of the Committee at a meeting.
5. *No business* shall be transacted unless *at least 3 members* of the Committee shall be present, of whom the Curator shall be one.
6. No expenditure of money shall be made by the Committee without the concurrence of the Curator.

If I were as willing, as I am unwilling, to carry out this stringent Code with literal exactness, I doubt if I should find it possible to do so. If, for example, a “question” should arise during dessert as to ordering in another bottle of wine, am I to summon a meeting, giving “a week’s notice,” to settle it? As a matter of fact, though obedient to the *spirit* of these Rules (as I interpret them), I have repeatedly broken the clauses italicised, so far as the *letter* of them is concerned. I will first give my interpretation of them, and then enumerate the various ways in which I have broken them as they stand.

In Rule 3, for “in the second week of each Term” I read “when necessary”: for “shall give notice in the preceding week” I read “shall give due notice”: and for “a week’s notice” I read “due notice.”

In Rule 4, for “All questions” I read “All important questions.” (See Appendix A.)⁴

In Rule 5, for “No business” I read “No important business”: and for “at least 3 members” I read “at least 2 members.” Had I observed *this* Rule literally, very little of the business of the past year could have been done at all. (See Appendix A.)⁵

Thus it appears that I have broken every portion of the Code which it was possible for me to break by myself: the excepted portion being the last clause of Rule 5. But here, just as it began to seem inevitable that this portion of the Rule would survive unbroken, my friends the Members of the Committee gallantly came to the rescue. On Friday, Nov. 9, three Members of the Wine-Committee assembled themselves together, *the Curator not being present*, and what was then done has been repeatedly referred to by them, as business transacted at a real Meeting.

Does the reader expect to learn that I resented this unconstitutional conduct on the part of the Committee? Not I! I was a very lamb on the occasion—a sucking dove. Whether or not I laughed in my sleeve is another question, which I do not at present enter on further than to remark that the sleeve of the M.A. gown is peculiarly adapted for that purpose, the quadrantal excavation at the lower corner being apparently exactly fitted for concealing a mouth when on the broad grin.

While on the subject of these Rules, I may venture to call attention (though in such guarded language as not to criminate myself) to Rule 1, which states that the duty of the Committee, “*including the Curator*” shall be “to assist the Curator.” Hence, logically, it is the bounden duty of the Curator “*to assist himself*.” I decline to say whether this clause has ever brightened existence for me—or whether, in the shades of evening, I may ever have been observed leaving the C.R. cellars with a small but suspicious-looking bundle, and murmuring “assist thyself, assist thyself!”

Perhaps the most interesting feature in the career of the Committee has been its gentle fading away in dimensions—“fine by degrees, and beautifully less.”

Tune: “TEN LITTLE NIGGERS.”

“Four frantic Members of a chosen *Committee*!
One of them resigned—then there were Three.

“Three thoughtful Members: they may pull us through!

Quoted from *Henry and Emma* by Matthew Prior

Parody on *Ten Little Niggers*

⁴Original phrase different

⁵Original phrase different

One was invalidated—then there were Two.

“Two tranquil Members: much may yet be done!
But they never came together, so I had to work with One.”

And I find, by the records of the business transacted during the year, that much of it was done with only this very limited number of Members present besides the Curator.

The reader may perhaps expect, as the outcome of all this, a suggestion that the Committee should be abolished: but this I am by no means anxious for. It would be *possible*, I have little doubt, to carry on the business without a Committee (in fact, it has actually been done in past years): but the existence of a Committee is satisfactory to the C.R., and so long as that is so, and so long as my interpretation of the Rules is accepted, and I may feel assured that I am *not* (as has been suggested) reduced to a simple member of the Wine-Committee, I think we may work together very well.

One other matter, connected with the Committee, remains for notice. It has been sometimes suggested that it would be well to get our wines from co-operative stores instead of from the merchants who have for so many years, and so well, supplied us. This, by the letter of the Rules, is a step which is within the power of the Committee to vote. I may as well distinctly state that I should disregard such a vote. I hold that, even if we *could* get equally good wine, cheaper, from co-operative stores, we ought not to do it; this may raise a smile among those who hold that our own interests are the only safe guides: but I have noticed that some, who fail to see that we have some duties towards our tradesmen, quite recover their keenness of vision when considering *their* duties towards *us*. Still, as nothing I could say would convince such persons, and as others need no argument, I need only say that, so long as I have the honour of being Curator, I shall not leave any tradesman who has served us long and well, without a much better reason than a mere saving of a few pounds.

Secondly, I hold that in buying wine we must trust largely to the skill and honesty of the merchant: and which gives the best guarantee for these—the experienced merchant, who has a character to lose, and to whom an old customer is the best of recommendations, or a new company, to whom we are No. 666?

Thirdly, I gravely doubt much that I hear of the cheapness of Stores, and the excellence of their wines. Let me quote “From Vineyards to Decanter,” a little book about Sherry, published in 1876.

It exists as a unique characteristic of the wine trade that capital and connection are considered sufficient qualification without technical education or training. Now a man cannot practise at the bar without being duly called, or act as solicitor without having served his articles; he cannot practise as a doctor without walking the hospitals and passing certain examinations; he cannot become a civil engineer without serving a regular apprenticeship; to become a tea-broker he must be trained in tea-tasting; and should he untrained undertake any of these positions, his ignorance would shortly be his ruin. But what proficiency is wanted to qualify a wine merchant? A gentleman of good connection with money and time at command, if wishing to augment his income, would seem naturally to cast about him for a berth in the wine trade, without thinking that absence of technical education is in any way a disqualification; and if an opportunity offers, he fearlessly assumes the direction of a business. He thinks himself qualified to cater for others, because, forsooth, he likes a glass of wine as well as any of them! Possibly he may have gained the reputation of being a *first-rate judge* amongst his friends by roundly stating at dinner that the wine he is drinking is of this or that

vintage, and is worth *exactly so many shillings per dozen*; which priggish opinion was perchance arrived at, when he had just eaten mullingatawny soup, cayenne pepper, or preserved ginger. Under such circumstances a man who had spent his life in the trade would not hazard an opinion; and till he had tested the wines in question by careful tasting and comparison, he would probably mistrust his judgement.

Knowledge in this does not differ from any other kind of knowledge, in that the more a man knows the more he feels he has to learn; and a little reflection will show, that as much time and even more arduous application are necessary in the education of a wine merchant than are wanted in many other trades. A knowledge of general business, office details, &c., must be acquired, added to which there is cellar management, only to be learnt by practice; so that if a cellarman does not thoroughly know his work, his master can teach him. Lastly, the palate has to be educated in tasting, a work which, if done satisfactorily, must be commenced at the very rudiments: after these have been mastered, it is only by continued perseverance that the faculty is acquired of detecting the more subtle distinctions.⁶ In the case of those who become wine merchants *per saltum* this gradual education is never attempted. "Blood is thicker than water," they say; and pinning their faith upon the maxim, gentlemen go into the trade relying wholly upon their standing and connection.

I think, however, that the *reductio ad absurdum* of trading is to be found in the wine departments of co-operative stores which deal in miscellaneous goods. I tried sherry from a store where sales in general goods reach a total of hundreds of thousands per annum, and whose business in wine alone is such as would rival and perhaps surpass that of any London wine merchant. In order to test their value by comparison, I obtained samples, through a friend, of Sherries between 30s. and 48s. per dozen, from Messrs. Christopher and Co., Messrs. German and Co., and Messrs. John and Charles White. I did not find any advantage in the wines from the General Stores; on the contrary, I thought that the private traders gave better value for the price. Mistrusting my own judgement, I classified all the wines according to their price under three heads, and sending samples, with marks of my own, to two reliable members of the trade, I asked their opinion upon each class after having tested the wines by blind tasting. The following is the result:

In Class I., Mr. A. places the Society's sherry fourth on the list, Mr. B., third.

In Class II., both Mr. A. and Mr. B. placed the Society's wine third.

In Class III., Mr. A. placed the wine from the stores fourth, and Mr. B., third.

Besides these three Classes, I found quoted in the Company's list as an Amontillado a wine which seemed to me in no way to resemble what is known in the Spanish trade under that name, and this I marked "Amontillado." In their report the two professionals stated that they could not find the least trace of amontillado in the blend!

Now consider the advantages at which the great co-operative societies trade. They derive an income of some thousands a year from ticket-money, *though at no expense for delivery*. Bad debts are impossible; and prepayment produces cash so readily as to present the unheard-of marvel of trade safely conducted without capital. Nevertheless, at this particular Store it is evident that the sherry is sold at higher rates than would be charged by a first-class wine merchant; obviously because the committees of management have had no more technical training than our *per saltum* friend when taking his fearless leap, and the departmental managers are not of calibre to supply the lack. There exists, indeed, another alternative. Can it be that wines are sold at a profit sufficient to cover losses made in the other departments?

⁶The truth of this remark I have repeatedly verified by experiments on Members of the Wine-Committee and other friends, and have come to the conclusion that amateur-tasting is not a thing to be relied upon. Even those who—in the noble language of the Moderation-lists—"egregiè se commendaverunt" have proved to be, like other mortals, "obnoxious to error."

Here are a few of the questions which are put from time to time, showing the confused ideas existing in the public mind, as well as amongst wine merchants.

Is not the colouring of sherry given by brown sugar and treacle?

How is it that so pale a wine can have so much *brandy* in it? thinking the spirit used to be coloured, just like the Cognac commonly drunk.

What is the exact age of this sherry?

What vintage is it?

Can this wine be pure, as it has a sediment?

Of ordinary sherry—is this a natural wine?

One of the above questions—“What is the exact age of this sherry?”—has been actually put to me, with reference to our wine-tariff. Of course all I can give in reply is the date when it was bought and (presumably) bottled: “exact age” it does not possess.

6. Of Chalybeate Waters

“This is the killibeate.” Pickwick.

Quoted from *The Pickwick Papers* by Charles Dickens

It is not the happy lot of every Curator to be criticised, not only by resident members of the C.R., but also by distant correspondents. I have received, during this past year, a long series of letters from one writer, of a highly critical—not to say hostile—tendency. These have been fired off at me with a monotonous regularity, having all the persistency—without the pathos—of minute-guns. The writer’s name I think it best to suppress: but some of my readers will perhaps surmise it, when I tell them that he was a Member of the House (and, I believe, of C.R.) till the end of 1879, and that he is now residing not a hundred miles from Tunbridge Wells.

How he has possessed himself, as he evidently has, of the minutest details of what is done and said by the Members of the Wine-Committee, both individually and collectively, I will not stop to enquire: and whether the officials in the Tunbridge Wells Post-Office have struck, or are likely to strike, for an increase in salary, is another question I must leave on one side: in a pamphlet such as this, an exhaustive treatment of *all* subjects of human interest is plainly impossible.

Let me cull a few rosebuds from the rich garden of fancy, of which this series of letters are the beds and borders:—

“Is there any object or advantage gained by violating the plain Rules under which the Committee was elected to manage the C.R. cellars?” (*Ans.* Yes.)

“You know perfectly well that you had no power whatever to buy these Liqueurs” (I had ordered a few pounds worth on my own responsibility), “and that you are acting against the express wishes of those who elected you in doing so.”

“The Rules were expressly framed with a view of preventing the Curator from buying Wines, &c. of his own motion.”

“You have no more right than any other member of the Committee to purchase Wines, &c. for the C.R. cellar.”

“What is the use of the Wine-Committee, if you are free totally to ignore their wishes and orders?” (*Ans.* I do not know.)

“The C.R.” (in accepting the Rules) “deliberately reduced the Curator to a simple member of the Wine-Committee for all purposes of ordering Wine, &c.”

“I quite understand your dislike to novelties of this kind” (the abandoning our old tradesmen and dealing with co-operative stores), “and although I don’t in the least agree with you in thinking it to be a gain to any one to support the system of middlemen’s profits, I am not surprised that those who have so long been accustomed to pay them should wish to do so still.”

In the last letter from which I shall quote, after mentioning that a “friend” of mine had said that men of my standing “cannot govern constitutionally,” he adds “well, we must aid them as far as we can.” These letters are, I suppose, meant to “aid” me: but I feel inclined to say, with the man who was “aided” by an officious bull in surmounting a fence, “you have ideed assisted me: yet it was not precisely the form of assistance I most desired!”

What most amuses me in this series of projectiles is the novel view it gives me of my position as Curator. I had been weak enough to picture myself to myself as a well-worked and slightly worried individual, trying, to the best of his poor judgment, to do his duty by the friends who had entrusted their Common Room to his care—acknowledging responsibility to those friends as a body, but most certainly *not* to single members of that body, still less to outside-critics—and behold, I find I am a dark conspirator, going about in cloak and domino, with daggers and detonators, and withal liable to be put in the dock and lectured by any *soi-disant* judge that chooses to don the wig and gown! All this is, as Tennyson says “sweet and strange to me.”

Quoted from *The Dying Girl* by Alfred Tennyson

7. A Vision Of The Future

“Sequimur te.” Horace.

Quoted from *Aeneid* by Virgil

It was 1983, and the new Curator was in an awful dilemma. True, he had come out of his last difficulty with flying colours. Only a month ago, passing the Common Room one afternoon, he had noticed the cellar door open, and strolling in had found two shabbily-dressed men filling a coal-sack with bottles of old Port. They had declined to explain their motives, and had left hastily. But the Curator had been true to his duty. “It is a question of *keeping wine*,” he had said to himself, “and can only be decided by a majority of the Wine-Committee at a duly-summoned meeting.” So he had called a meeting for that day week: and, when they met, no one knew exactly where to find the men. “I feared we should lose the wine,” he told the Committee: “but *I do not think I am justified in breaking the rules made by Common Room on any pretext whatever!*” The Committee applauded as nine tailors.

And now, within the last few days, the Common Room, ever anxious to oblige their Curator in all things, had devised a new Code of Rules, which fitted him to a T, like a new pair of handcuffs—a Code of Rules which, as they fondly hoped, he would welcome as something really striking and stringent.

This was the Code:—

Rules for the Wise-Committee

“1. There shall be a Wise-Committee consisting of one person, excluding the Curator, whose duty shall be to assist the Common Room in the managing of the Curator.

“2. The member of the Committee shall be self-elected.

“3. A meeting of the Committee shall be held on every day in each Term.

“4. All questions relating to the obedience, or disobedience, of the Curator, to the Rules of the Wine-Committee, shall be decided by a majority of the Wise-Committee at a meeting.

“5. No business shall be transacted, unless at least one member of the Committee be present.

“6. Nothing shall be done, or left undone, by the Curator without the concurrence of the Committee. And, if the Curator shall complain of cold, it shall be the duty of the Committee to make things warm for him.”

After this Code had passed into law, the members of the Common Room went about with elastic steps, and hearts bursting with joy and thankfulness. “The wild beast is caged at last!” they were always saying to each other, shaking hands whenever they met. The Curator appeared to be less entirely at his ease. His walk was suggestive of Tight Boots, his countenance of Toothache, while his general deportment was that of a man whose system has been demoralised by too much Tea.

About this time also the following song became popular among the little boys:—

“I love my love with a T,
Because he is Tethered and Tied:
I hate him with a T,
Because, in spite of me,
He is not Terrified!”

(*Spoken.*) “I took him to the sign of Tom Tower, and fed him with the Tallest of Talk. My name is τικς, and I live at Tunbridge Wells.”

All this was very cheerful, but a new difficulty had arisen, and the Curator was distracted. An old member of the Common Room had just come to Oxford, who always took pale brandy and soda at dinner, and there was nothing but brown in the cellar. “What *am* I to do?” groaned the agonised Curator. “It will take 8 days to get a Committee-meeting to settle from what merchant to get samples—4 days to get the samples—8 days more to get a meeting to select the brandy and fix the price to put on it—and 4 days to get it. That is over 3 weeks, and the poor old man only stays a fortnight!” Beads of perspiration trickled down his manly forehead. After some hours of anxious thought, he nerved himself for a truly desperate step: *he ordered a bottle of pale brandy on his own responsibility!* And forthwith came a letter from Tunbridge Wells. “What! you’re at it again, are you? For ever trampling on the liberties of Common Room, and conspiring against the Constitution! What’s the good of the Wine-Committee? What’s the use of my anathematising you twice a week by post, and doing my best to make your life a burden? What’s the good of anything? And *you* pretend to be a constitutional Curator? Yah, you Cockatrice!”

I don’t quite know what became of that guilty Curator. I believe he fled to other climes; and they elected a new one: and Common Room was once more supposed to be governed on constitutional principles: and no hitch occurred—till the next time.

8. Of the Transactions of the Year.

“*If ’twere done, then ’twere well done.*” Shakespeare.

Quoted from *Macbeth*
by William
Shakespeare

Transactions are of two kinds, those done and those not done: we will take the former first.

(1) The Ledgers have cost me a great deal of time and trouble. But the saving of time and trouble, in the future, will I hope more than balance this. It appeared necessary to construct a new set, and this I did not find possible without many experiments, many failures, and I fear much cost in printing. It is not possible here to give any intelligible account of them: but if any Member of C.R. feels any interest in the subject, I shall be happy to show him what has been done.

(2) The Coal-cellar, as I found it, was a small recess on the way down into the Wine-cellar. To the Common Room it supplied coals for a few days' consumption: to those visiting the Wine-cellar it supplied an area of coal-dust, an inch deep, through which it was necessary to tread. I have had one constructed, out in the garden, which will hold a year's supply.

(3) The book-shelves, which were insufficient, I have added to by shelving the lobby at the entrance to C.R.

(4) In order that Members might be able readily to refer to back numbers of our daily papers, I have had portfolios made, each holding a fortnight's supply of one paper.

(5) I have had new tiles put to the fire-place, and have covered the blank wall above the wainscoting with one of Morris's rich papers.

(6) At the request of some of the Members, I have instituted (experimentally) "5 o'clock tea," from 4.30 to 5.30, in C.R. There are certain financial questions, connected with this, which I shall submit to C.R. at the meeting.

I proceed to the second part of my subject—transactions not done.

(1) The re-organisation of the electric bell, which was originally presented to C.R., in 1870, by Mr. R. H. M. Bosanquet.

In the record of meetings of C.R., under date Nov. 30, 1874, I find the following entry:—

"Agreed that the electric bell, with the wires, reaching to the Curator's chair, be put in order after having been destroyed two years ago by Mr. S. Owen. Mr. Baynes, Lee's Reader in Physics, arranged this."

Nine years have elapsed since this record was made, but the kind of feeling, which prompted the offer of Mr. Baynes, is as strong as ever. There can be no doubt that he will be as good as his word, and that the wires will be put in order.

(2) There have been many other things not done during the year: but I will not further tax the patience of my reader.

9. Last Words.

"A-do, Samivel," said the old gentleman.

'Wot's a do?' enquired Sam." Pickwick.

Quoted from *The Pickwick Papers* by Charles Dickens

Holding, as I do, that many of the woes of life not only have a comic side but are often best viewed from that side, I have written, so far, more as a Laughing than as a Crying Philosopher: but it is necessary to make a few serious remarks in conclusion.

It would be hard to put into words the extreme reluctance with which I took this office at the end of 1882. Had I simply consulted my own personal

inclinations and interests, I should have declined it, absolutely and inexorably. I want leisure-time, for purposes of my own, very much indeed: and during this past year I have had to give most of my working hours to the duties of my new office. The new ledgers, entailing as they did the keeping of the accounts, during a considerable part of the time, with my own hand, have cost me a great deal of very hard work. I do not doubt for a moment that others would have done the same thing better, and with less work: but that does not mend matters for *me*. Even the correspondence has been no small tax on my time and attention. I see by my register that I have written and received, during the year, about 800 letters on Common Room business alone. If I could have foreseen the work of the year, I doubt very much if I should have undertaken it: and if I thought that next year would bring the same amount, I should feel it absolutely out of the question to go on: but I do not anticipate this; now that the new ledgers are completed, I think the work will not be more than I can undertake, if Common Room wishes me to go on, while securing a reasonable amount of time for my own occupations.

But before entering on another year of office, I must come to a clear understanding on the subject of the Wine-Committee; and, in order to leave Common Room perfectly free to settle the matter to its own satisfaction, I intend, at the meeting on Shrove Tuesday, when the other business has been disposed of, to resign my office and retire from the meeting. There will then be three courses open to Common Room.

(1) To elect another Curator, without reference to any question connected with the Wine-Committee. This is the result that, personally, I desire most of all: the relief to myself would be most welcome; and if any other Curator can be found, whom Common Room would be satisfied to elect, I earnestly hope that he may be elected.

(2) To re-elect me, on the distinct understanding that I shall accept such re-election as signifying that Common Room endorses the interpretation I have put upon the Rules of the Wine-Committee, and is willing to trust me with the same amount of discretionary power in the future which I have assumed to myself in the past. I wish here to state most respectfully, but most distinctly, that I will not take office again on any other conditions. Hard *work* is good for every one, and I enjoy it: all I ask is to be spared from *worry* (which is to me far more exhausting and crushing than any amount of work), and from the liability of being taken to task by individual critics for not literally obeying the Rules of the Wine-Committee.

(3) If, however, Common Room wishes to endorse the statement of my Tunbridge Wells correspondent, that, in passing those Rules, they “deliberately reduced the Curator to a simple member of the Wine-Committee for all purposes of ordering Wine, &c.”—if, in a word, they wish to have a mechanical Curator, who will carry out their Rules, under all circumstances, with the unreasoning precision of an automaton—then it will be necessary to find some one else to take the office. They *may* find such a Curator, but it is doubtful whether, after a few months’ experience of such an environment, he would find existence easily distinguishable from a mustard-plaster.

I leave the matter in the hands of Common Room. If they can find another Curator, generally acceptable, I shall sincerely rejoice. If not, I will put personal feelings aside and resume office: and, when once assured that my “conceptions of government according to the law,” however “archaic,” are endorsed by C.R., I

shall bear with equanimity all other criticism; and even the shower of missiles—I mean missives—from Tunbridge Wells will be to me “like a tale of little meaning, though the words are strong.”
[...]⁷

Quoted from *The Lotus-eaters* by Alfred Lord Tennyson

⁷Remark: The two appendices are not reproduced here. Appendix A has the “details of rules broken”, starting with “wines, &c., ordered” until “cellar arrangements.” Appendix B has the “analysis of accounts for 1883” with “receipts” and “expenditure.”

12.22 The Proposed Procuratorial Cycle

Source: printed 1885, the Postscript could be torn off

To be Submitted to Congregation on Oct. 27, 1885

If, as will be generally admitted, the Proctorship is a dignity coveted by many members of this University, it is surely axiomatic that one's chance of attaining to it should depend on personal fitness for it—not on the mere accidental circumstance of belonging to a large or small College. Yet the proposed scheme would actually make one's chance *vary inversely* as the size of the College! For example, Keble College, with 120 members of Convocation and 5 of Congregation, is to have as many turns as Exeter with 471 members of Convocation and 22 of Congregation, so that each member of the smaller College will have *four times as good a chance* of being made Proctor as a member of the larger would have!

The obvious way to avoid this anomaly is to give to each College turns, in electing a Proctor, which shall be in proportion to its size. The now rejected Cycle was made on that principle: and, because in some details it was open to objection, it is proposed to abandon its principle, and to substitute one as crude, and as absurd in its results, as could well be imagined.

The chief objection, brought against the rejected Cycle, seems to be that it takes account of the number of Undergraduates in a College—which is considered to be an irrelevant matter. This seems to be a fair objection: but surely we need not reject, on its account, the whole well-established principle on which a Cycle should be calculated. The number of turns, assigned to a College, should clearly be proportioned to the number of its members who are eligible as Proctors. And I think no great injustice will be done if we assume this number to vary as the number of its members who are members of Convocation.

In the following 30-year Cycle, this principle has been adopted, and the reader can see for himself, by inspecting the table which follows it, that turns assigned are, as nearly as possible, proportional to the number of members of Convocation. The number of turns, assigned by the Cycle of 1859, are added in parentheses.

The foregoing Cycle has not been arranged at random, but the claims of the various Colleges have been estimated for each year, allowing a claim to be stronger in proportion to the number of turns the College is to have in the Cycle, and also in proportion to the number of years it has been waiting for a turn.

Though I am not offering this scheme for a Cycle with any idea of its being proposed for adoption in its present form, yet I hope that what I have said may induce many members of Congregation to pause before they assent to the adoption of a Cycle so utterly unjust and unreasonable as the one to be considered next Tuesday.

Charles L. Dodgson.

Postscript

Addressed to Mathematicians Only

It will, I think, be satisfactory to mathematical readers to know the details of the process by which I calculated the foregoing Cycle.

First, I divided 5473, the total number of members of Convocation, by 60, the total number of "turns" in a 30-year Cycle, which gave 91 as quotient. It seemed reasonable, then, that each College should have one turn assigned to it for every 91 members of Convocation it possessed. So I divided these numbers by 91. The quotients are as follows:—

<i>Colleges.</i>	<i>Quotients.</i>	<i>Turns.</i>	<i>Colleges.</i>	<i>Quotients.</i>	<i>Turns.</i>
Ch. Ch.	7·90	6	Worc.	2·47	3
Exeter	5·17	5	Wadh.	2·36	2
Balliol, and New Inn H.	3·96	4	New	2·34	2
Queen's, and S. Edmund H.	3·51	4	Merton	2·33	2
B. N. C.	3·48	4	Pemb.	2·04	2
S. John's	3·48	4	C. C. C.	1·96	2
Univ.	3·13	3	Linc.	1·96	2
Trinity	2·93	3	Hertf.	1·64	2
Oriel, and S. Mary H.	2·89	3	Keble	1·31	1
Magd.	2·53	3	Jesus	1·25	1
			All Souls	1·05	1
			Non-Coll.	0·46	1
				60·10	60

The number of turns assigned is, in all but 4 cases, the *nearest* integer to the quotient so obtained. The excepted cases are:—

Ch. Ch.	7·90	—6
B. N. C.	3·48	—4
S. John's	3·48	—4
Worc.	2·47	—3.

Here the integer, assigned to Ch. Ch., is 2 less than it should be; while the other 3 integers are 1 too great. But they are so similar that, if one be lowered, all must be; and, though we could then give Ch. Ch. its proper integer, 8, we should have an extra turn to dispose of, which could not be *anywhere* assigned without injustice. Moreover, I think Ch. Ch. has so exceptional a number of members of Convocation on its books that it is reasonable to ignore much of this excess, and it may well be content to have one turn more than any other College.

Having settled the number of turns each College should have, I calculated, for each College, and for each year in the Cycle, a "claiming number," and assigned "turns" to the two Colleges whose "claiming numbers" stood highest for the year. In calculating them, I assumed that, where two Colleges have the same number of "turns" assigned to them, that one, which has been longer without a turn, has the higher claim; and that, where two Colleges have been waiting equally long, that one, which has the greater number of turns assigned to it, has the higher claim. Hence, since both these elements are variable, I took their *product* as the claiming number. It was of course necessary, in commencing the Cycle, to assign fictitious periods of waiting to Keble and the Non-Collegiates, who have not as yet had turns at all. For this purpose I took the *average* of all the other periods of waiting.

In most of the years I found two of the "claiming numbers" greater than all the rest, so that it was clear which Colleges ought to have the turns. The excepted cases were as follows:—

In 1896, Ch. Ch. stood first with "30," while B. N. C. and S. John's came next with "28" each. I could not settle the question, of which to take, by actual numbers of members of Convocation, as these are exactly equal: so I took into account the fact that, at the beginning of the Cycle, S. John's had been waiting

one year longer than B. N. C. But, to be quite fair to B. N. C., I reckoned as claim, in subsequent years, as if it had been waiting since 1896, instead of 1897.

In 1905, Lincoln and Merton stood equal for the second place, with "26" each. Here I gave Merton the preference, as having more members of Convocation. I observed the same principle in 1914 and 1916.

Lastly, in 1918, I assigned a turn to Jesus College, with a "claiming number" 30, rather than to either B. N. C. or S. John's, with "32" each: this was simply because it had not yet had a turn at all, while all the other Colleges had had their proper numbers.

If the calculation were carried on into 1919, B. N. C. and S. John's would have the two turns, as they have in 1889. Thus the Cycle would begin again.

It might be found necessary, in order to make due allowance for the varying numbers of members in Colleges, to make a fresh calculation at less intervals than 30 years, e. g. every five years.

Charles L. Dodgson.

12.23 The Proctorial Cycle

Source: printed 1885

To be Voted on in Congregation on Tuesday, Nov. 10, 1885

For two reasons I venture to trouble Members of Congregation with a few more printed remarks on this subject, instead of waiting till Tuesday: one is, that I am no orator; the other, that I doubt if *any* oration ever affects the voting to any appreciable extent. Men come with their minds already made up: they listen, with an ill-concealed impatience, to the debate, and then immediately vote, without the least regard to it, as their consciences, or their friends, have already dictated.

The main question to settle on Tuesday is, not *which* of the possible Cycles, that might be calculated, is the best—we shall have ample time, before 1889, to consider *that* question—but whether a Cycle of Simple Rotation is better (as its supporters believe) than *any* Cycle based on the relative sizes of Colleges.

And what I would urge is that almost *any* such Cycle would be more fair than the one now proposed.

Mr. Moore, in a paper put out in answer to mine, states that “the number of members of a College who are (practically) eligible as Proctor, depends not on the number of its Members of Convocation, but rather on the number of its educational staff, or perhaps of its Governing Body, or possibly, some might say, its Members of Congregation.” That may be. I only offered my Cycle, calculated on the numbers of Members of Convocation, as a *specimen* of a Proportionate Cycle. All these different ways would have to be fully considered, if (as I hope) Congregation rejects the “Simple Rotation” Cycle: and it would be well also to inquire on what principle *Cambridge*, whose Cycle is, like our existing one, Proportionate, has calculated it.

Mr. Moore also thinks that a Proportionate Cycle would place at a disadvantage a Member of a College whose turn for electing a Proctor occurred at intervals of more than 11 years, because “it is well known that the eligibility of any person for the Proctorship is by Statute *limited to a period of 11 years*,” so that “some members of that College, however personally fitted for the office, will be excluded by standing from ever being elected by their own College.” Really, one is almost ashamed of having to refute so transparent a fallacy. A Proportionate Cycle is framed for the express purpose of giving to each man an *equal* chance of being elected, and a charge, of breaking down under so simple a test as this, is almost too absurd to discuss seriously. Let us, however, take a simple example: suppose two Colleges, one having 20 members eligible as Proctor, the other 10; and let the larger College have a turn once in 11 years, and therefore the other once in 22 years.

Any schoolboy could calculate the respective chances of election enjoyed by two members, one taken from each College. Suppose all the names on the books of the larger College during the next century could be put into a bag, and one drawn at random. What is his chance of being elected Proctor? There are only *two* elements to consider: one is, the chance that an election will occur during his statutable period of 11 years (which depends on the number of turns assigned to his College), the other, his chance, if an election *does* occur, of his

being elected (which depends on the number of members in the College, as of course we must allow them all *equal* chances). Now, it is *certain* that an election will occur in his time: hence all we have to estimate is the second of these two elements: there are 20 competitors, so that his chance is 1-20th.

Now take a member of the small College: the chance of an election occurring in his time, is evidently one-half: and the chance that, if it *does* occur, he will be elected, is 1-10th: and one-half of 1-10th is (if I may be excused for mentioning so childish a truism) 1-20th. So that the member of the smaller College has *exactly the same "expectation"* as the member of the larger. It will indeed be a memorable day for Mr. Moore, if he ever succeeds in proving that one of the most elementary formulae in Algebra is incorrect! We shall next have him proving that the angles at the base of an isosceles triangle are *not* equal!

In contrast with the above illustration of the absolute justice of a Proportionate Cycle, let us consider an instance of the working of a Cycle of Simple Rotation. Observe these 40 men coming up High Street: the 20 on the one side are radiant with happiness—those on the other side are silent and gloomy. Why this difference? Let us accost the more cheerful company:

“Whence came ye, jolly Satyrs! whence came ye,
So many, and so many, and such glee?”

Quoted from
Endymion by John
Keats

“We come,” they say, “straight from an interview with Mr. Moore. He has just told us that, as we happen to constitute *two* Colleges, ten in each College, we shall be called on to elect *two* Proctors in the next 11 years, so that *two* of us are secure of reaching that high office. ‘But you, O Unfortunate,’ he added (addressing those poor creatures on the opposite side), ‘since ye constitute but *one* College, know that but *one* of your number shall have a chance of the prize!’ Have we not, then, good cause to be jolly?” And this is Mr. Moore’s idea of even-handed justice!

Mr. Moore has one more objection to a Proportionate Cycle, viz. that “granting that it was approximately fair when first made out,” it “would almost certainly be far from corresponding with existing facts long before the Cycle of 30 years had run its course.” Now, I had said in my paper “it might be found necessary, in order to make due allowance for the varying numbers of members in Colleges, to make a fresh calculation at less intervals than 30 years, e. g. every five years.” At any rate, it would have run for *centuries* before it would be anything like so unfair as a Cycle of Simple Rotation!

Lastly, Mr. Moore states that the Cycle of Simple Rotation “has at least the merits of simplicity and permanence.” One can only admire the simplicity of a reader who finds any weight at all in such a plea. If a proposal be (as I contend his proposal is) radically unsound, its “simplicity” is a very doubtful recommendation, while its “permanence” only intensifies the evil. If you cut off a man’s nose, you undoubtedly *simplify* his features: and such an arrangement would most probably be *permanent*: still, were it proposed to apply the process to Mr. Moore himself, I feel no doubt that he would raise objections.

I trust that any Member of Congregation, who agrees with me as to the absolute unfairness of the scheme to be voted on next Tuesday, will take the trouble to come and vote against it, leaving the rival merits of the various possible Proportionate Cycles to be considered hereafter.

At least one may trust that no one will be led away by so flimsy a plea as that advanced by Mr. Pelham in the last debate—that “what is mathematically true

is usually found to be practically false!" Does Mr. Pelham suppose that Architecture, Engineering, Insurance, Land-surveying, Navigation, are not "practical" Sciences? Would he willingly take his passage in a ship, whose captain adopted this wild theory in calculating his latitude and longitude? If Mr. Pelham ever undertakes the management of a large School, I presume he will make some such speech as this to his boys. "I have noticed, Boys, a great inequality in the distribution of food at dinner-time. The long table in the middle has four times as much as the end one, and each side-table has three times as much. This was so arranged, I believe, for the ridiculous reason that the one contains four times as many boys as the end-table, and the others three times as many. But this is merely a *mathematical* truth, Boys, and is therefore *practically* false. The new arrangement, which I am sure will commend itself to your common sense, will be that of delivering dishes to the separate tables *in simple rotation*. So remember, Boys, that in future the long table will not have its four dishes, and the side ones their three; but that there will be *one leg of mutton for each table!*" (Cheers?)

Charles L. Dodgson.

12.24 Suggestions as to Election of Proctors

Source: printed 1885

[In the following suggestions, the word “College” is to be taken to mean “College, or College and Hall combined, or the Body of Non-Collegiate Students.”]

In any system, by which turns in electing Proctors are to be assigned to Colleges with a frequency which shall be proportional to the *size* of each College, the first question to be settled is, what criterion of size should be adopted.

Several such criteria have been suggested, e. g. the number, on the College books,

- (1) of members of Convocation;
- (2) of members of Congregation;
- (3) of its Governing Body;
- (4) of its Educational Staff;
- (5) of all members, graduates and undergraduates;
- (6) of members eligible as Proctor.

The last-named seems to be at once the most simple, the most equitable as regards aspirants to the office, and the most likely to be accepted by the University. This is the criterion adopted in the following suggestions.

In what follows, the phrase “eligible members” is to be taken to mean “members eligible as Proctor.”

If any other criterion of size be preferred to the one here adopted, this phrase may be replaced by “members of Convocation,” or by any similar phrase, without rendering any other change necessary.

Assuming, then, that the claim of any College, to elect in any given year, should be taken as proportional to its number of eligible members, at least in the case of two Colleges who have been waiting equally long for a turn, it may also be assumed that, in the case of two Colleges of equal size who have been waiting *unequally* long, the claim should be taken as proportional to the number of years of waiting. If these two conditions be granted, it follows by ordinary “Double Rule of Three” that, when both elements vary, the claim is fairly represented by the *product* of the two numbers.

The second question to be settled is whether the *data*, used in determining for any given year the claims of the several Colleges to elect in that year, should be merely the most recent obtainable, or should be an average, taken over previous years. It can hardly be necessary to point out that, if the number of members in a College has changed suddenly within the year, to multiply the new value by the number of years of waiting, and thus to make the recent change have the same effect as if it had occurred many years previously, is to give to the fluctuation far more than its due effect. The obvious answer to this question is, that the number, representing the claim of each College, should be the product of the number of years of waiting and the *average* annual number of eligible members for those years.

Now the average number of members, for a series of years, multiplied by the number of years, is identical with the sum-total of the annual numbers. Thus

the “claim” for any given year may be found by simply adding together these numbers, for all the years elapsed since the last election; and, when it is once known for any given year, the addition of the number of members for that year will give the “claim” for the next year.

It is obvious that the two Colleges, whose “claims” in any given year stand highest, are the two who should elect the Proctor for that year.

The third question to be settled is, how long beforehand it is desirable to know what Colleges will be entitled to elect in any given year.

It would seem that three or four years, at the outside, would be amply sufficient notice. It is conceivable that one, who was tolerably certain of being elected by his College in its next turn, might make his plans dependent on the question whether that turn would occur in three years or in four: but it is extremely unlikely that he would care to know whether it would occur in seven years or in eight. In the system here suggested, the rotation of Colleges would always be known rather over four years in advance.

The fourth question to be settled is, at what intervals the system of rotation should be re-adjusted, so as to give due effect to the fluctuation, in each College, of the number of its eligible members.

A Cycle of 30 years is undoubtedly too long for this purpose, and it is fairly open to the charge, brought against it by Dr. Moore, that, “granting that it was approximately fair when first made out, it would almost certainly be far from corresponding with existing facts long before the Cycle of 30 years had run its course.”

A Cycle of 5 years, re-adjusted once in five years, is less open to this charge, but labours under one of two serious disadvantages, which may be best stated as a dilemma. If it were computed on the most recent data, it could only be published just before coming into use; so that, towards the end of each period, there would be no certain information to be had as to future elections. If, on the other hand, it were published four or five years before coming into use, it would, though quite sufficiently in accordance with the facts in its first year, become less and less so from year to year; and there would always be a sudden change, with the introduction of each new Cycle, from the use of *data* ten years old to that of *data* only five years old.

But, granting that it is necessary to base the computation of claims, for any one year, on the *data* of five years back, in order that the names of the Colleges electing in any year may be published five years beforehand, there seems to be no reason for doing more than this. That is to say, if the names for the 10th year be published in the 5th, those for the 11th in the 6th, and so on, the order of rotation will always be known for the next 5 years, while the *data*, used in computing the claims for any one year, will always be neither more nor less than 5 years old.

The principle here adopted is that, in the year 1900 for example, the claims for the year 1905 shall be computed and published; and that the claim of each College shall be the product of two numbers—one, the number of years elapsed, in 1905, since its last turn, the other, what is assumed as its average annual number of members for those years, though it will really be a similar average taken, from the year 1900, back to its last previous turn.

It would be desirable for Council to publish in each Michaelmas Term, along with the list of members of Convocation the names of the ten Colleges entitled to elect during the next five years. Also, as it would be well to fix on a definite *day*,

for which each College should take the annual census of its eligible members, Michaelmas Day might be found convenient for this purpose.

In order to commence the new system in Michaelmas Term, 1886, it would be necessary to compute and publish the claims for 1889, 1890, and 1891. Those for 1889 would have to be computed by multiplied together, for each College, the number of years elapsed, in 1889, since its last turn, and the best attainable average of its annual number of eligible members. It would probably be most satisfactory, instead of going back into past years, to accept the returns for Michaelmas Day, 1886, as the average required.

This method would be easily worked out of all but 3 of the 22 Bodies contemplated in the new Statute.

But in the case of Keble and Hertford Colleges and the body of Non-Collegiates, a different method would be needed, since there is no previous "turn" to date from. For each of these Bodies an ideal "period of waiting" must be assigned: and this would equitably be half of the interval of years at which the "turns" of that Body ought to recur. To calculate this interval, it would be necessary to add together the average numbers of eligible members of *all* the Colleges, and to divide their total by the number of the College in question; and then to halve this quotient, since *two* Colleges elect in each year. This may sound complex; but, since the number of eligible members is used first as a divisor and then as a multiplier, it may be ignored altogether, and the practical result is to assign to each of these three Bodies, as its claim for 1889, one-fourth of the total number of eligible members in the University.

In the (probably rare) event of the two "claims" occurring, the rule might be adopted of giving precedence to the College that had waited longest: but this rule should be reversed, if it happened again with the same two Colleges.

The Table published (say in the year 1900) might be of the following form:—

Names of Colleges &c.	Claims for 1904.	Eligible Members in Mich. 1900.	Claims for 1905	Numbers
-----------------------	------------------	---------------------------------	-----------------	---------

The numbers in the 2nd column would, except for the 2 Colleges electing that year, be added to those in the 3rd, to give those in the 4th. For these 2 Colleges, the number in the 3rd would be repeated in the 4th.

The publication of such a Table would enable any one to calculate for himself, approximately, the order of rotation for any number of future years.

Suggested Form of Statute

Whereas it is expedient to revise the Procuratorial Cycle and to determine the qualification of the members of the several electing Bodies, the University enacts as follows.

In Statt. Tit. XVII. Sect. iv, § 1 (p. 218, ed. 1884) shall be struck out, and the following new subsection shall be substituted:—

1. Of the Election of Proctors

There shall be two Proctors, who shall be elected annually on the Wednesday after the first Sunday in Lent. In and after the year 1889, they shall be elected by the following Bodies, in an order to be determined as hereinafter provided.

University College. Corpus Christi College.
Balliol College. Christ Church.

Merton College.	Trinity College.
Exeter College.	St. John's College.
Oriel College.	Jesus College.
Queen's College.	Wadham College.
New College.	Pembroke College.
Lincoln College.	Worcester College.
All Souls College.	Keble College.
Magdalen College.	Hertford College.
Brasenose College.	Non-Collegiate Students.

For the purposes of this section members of St. Edmund Hall shall vote with Queen's College, and New Inn Hall shall be deemed to have been united with Balliol College, and St. Mary Hall with Oriel College.

Each of the above-named Bodies shall, immediately after Michaelmas Day, in and after the year 1886, furnish to Council a list of such members of Convocation as were on that day members of the said Body and eligible as Proctor. And Council shall publish, in Michaelmas Term, in and after the year 1886, the names of the ten Bodies entitled to elect Proctors for the five years next ensuing.

The names for the year 1889 shall be determined by multiplying, for each Body, the number of its eligible members by the number of years elapsed, in 1889, since its last turn. The products shall be taken as the claims for that year, and the two Bodies, whose claims stand highest, shall elect the Proctors for that year. And the claims for each subsequent year shall be computed by taking, for each Body, the last-returned number of its eligible members, and adding thereto its claim for the preceding year: but such addition shall not be made for the two Bodies electing in the said previous year.

To each of the three Bodies not included in the present Cycle, namely, Keble and Hertford College and the Body of Non-Collegiate Students, shall be assigned, as its claim for the year 1889, one-fourth of the total number of eligible members in the University.

If the name of any member of Convocation appear in more than one list at the same time, it shall be counted only in the list of that Body in which such member pays, or has compounded for, his University Dues.

The effect of the proposed Statute will be that the number, taken as the claim of each Body to elect in any given year, will be proportional to the number of years elapsed, in that year, since its last turn, and also to the average annual number of its eligible members. Hence the number of turns, assigned during any given period to each Body, will also be proportional to the average annual number of its eligible members.

The effect of assigning to each of the three Bodies, Keble and Hertford Colleges and the Body of Non-Collegiate Students, as its claim for 1889, one-fourth of the total number of eligible members in the University, is exactly the same as if each had had a previous turn, and the number of years elapsed had been, in each case, one-half of the interval at which the turns of that Body ought to recur.

Nov. 21, 1885.

Carroll's suggestion has a minor error. If there are four colleges, two with 50 members, two with 90, all four colleges will have the same number of turns, even though the larger are almost twice as fast. Instead, to calculate the claim for those colleges which had their turn that year, take the previous claim, add the number of members (as for the other colleges), but then subtract half the number of all members of all colleges.

12.25 Suggestions as to the Election of Proctors

Source: printed 1886

Introductory

As this matter is to be brought before the University on May 4, with a view to introducing a new Cycle in 1889, when (as is popularly supposed) the present Cycle will expire, I venture to circulate the following suggestions, for the information of those interested in the subject. It may be as well to mention that the present Cycle does not really expire, legally, in 1889, but will continue to revolve, if no steps be taken to change it for another, *in saecula saeculorum*. Still, as there are now two new Colleges, not included in the existing Cycle, it seems desirable, if only to do justice to *their* claims, that a new Cycle should be introduced.

The two main principles, which I desire to impress on all readers of this, are:—

(1) That the number of turns in electing Proctors, assigned to each College, ought to be proportionate to its number of eligible members: and that a “cooked” system, which assigns to a large College *less* than the number it ought to have, and to a small one more, though it may do justice, in a specious way, as between College and College, does *not* do justice as between man and man.

(2) That a Cycle, fixed beforehand to run for 30 years, however fairly calculated at first, will become less and less fair from year to year, owing to the increase and decrease, in size, of the Colleges, and the introduction of new Colleges: that, the shorter the Cycle, the fairer the result: and that the fairest of all would be a Cycle re-adjusted every year, so as to give immediate effect to every fluctuation in the *data*.

As this method—of a self-adjusting Cycle—had been submitted to the Hebdomadal Council, before they adopted the Scheme now proposed, I am not circulating the following paper with any idea of raising opposition to that Scheme. I merely wish to put on record the arguments that seem to me to prove this method equitable, so as to ensure them due consideration, if at any future time a change should seem desirable.

C. L. Dodgson
Ch. Ch.
April, 1886.

Suggestions, &c. 1. Other methods that have been proposed

In the Cycle now in use, which began in 1859, the number of turns, assigned to each College, was in some way proportional to the size of each: but of course, as the Colleges changed in size, the Cycle became, year by year, less equitable. A new Cycle, proposed last year, was objected to on the ground that it took into account certain data (e. g. the number of undergraduates in a College) that were considered irrelevant, and it was rejected, on June 2, in favour of a Cycle of “simple rotation,” by a majority of 54 to 26. This Cycle, however, did not come on for final acceptance till Nov. 11, and in the interval the subject had been so far ventilated, and opinion in Congregation so far educated, that the supporters of the theory suffered a loss of 7 votes, while the number of its opponents was exactly doubled; and the method of “simple rotation” was rejected by 52 to 47.

The existing Cycle, which there seems to be a general wish to abandon, has another defect, besides that of employing irrelevant data; it is constructed to run for too long a period, and necessarily ceases, long before its termination, to correspond properly to the relative sizes of the Colleges. (This has been well pointed out by Dr. Moore: see § 6.) The Cycle of “simple rotation” has the undoubted defect of not dealing equitably with individual aspirants to a Proctorship, in that it makes every man’s chance of election vary inversely as the size of his College.

The Cycle, to be proposed, and (I doubt not) accepted, in May, seems to me to combine the defects of both of these systems.

2. Number of turns to be proportional to number of eligible members

I claim the reader’s assent to the following Axioms:—

(1) That one man is as good as another.
(2) That, if two sets of ten men be taken, as to whom the only *datum* is that they belong to two different Colleges; then, whatever be the number of turns assigned, in a certain period of years, to *one* set, the same number should be assigned to the *other*.

(3) That, if two sets of men, one containing ten men and the other twenty, be taken, under similar conditions; then, whatever be the number of turns assigned, in a certain period of years, to one set, twice that number should be assigned to the other.

(4) That the number of turns assigned, in a certain period of years, to two different Colleges, should be proportionate to their numbers of eligible members.

These Axioms may appear to some readers very childish, and very elementary. Still, after the extraordinary schemes that have been put forth, and the extraordinary arguments that have been used, I find it difficult to imagine *any* Axiom, in this subject, too childish to enunciate, or too elementary to insist upon!

3. Criterion of size of College

In any system, by which turns in electing Proctors are to be assigned to Colleges with a frequency which shall be proportional to the *size* of each College, the first question to be settled is, what criterion of size should be adopted.

Several such criteria have been suggested, e. g. the number, on the College books,

- (1) of members of Convocation;
- (2) of members of Congregation;
- (3) of its Governing Body;
- (4) of its Educational Staff;
- (5) of all members, graduate and undergraduate;
- (6) of members eligible as Proctor.

The last-named seems to be at once the most simple, the most equitable as regards aspirants to the office, and the most likely to be accepted by the University. This is the criterion adopted in the following suggestions.

In what follows, the phrase “eligible members” is to be taken to mean “members eligible as Proctor.”

If any other criterion of size be preferred to the one here adopted, this phrase may be replaced by “members of Convocation,” or by any similar phrase, without rendering any other change necessary.

Assuming, then, that the claim of any College, to elect in any given year, should be taken as proportional to its number of eligible members, at least in the case of two Colleges who have been waiting equally long for a turn, it may also be assumed that, in the case of two Colleges of equal size who have been waiting *unequally* long, the claim should be taken as proportional to the number of years of waiting. If these two conditions be granted, it follows by ordinary “Double Rule of Three” that, when both elements vary, the claim is fairly represented by the *product* of the two numbers.

4. How the “number of members” in a College should be estimated

The second question to be settled is whether the *data*, used in determining for any given year the claims of the several Colleges to elect in that year, should be merely the most recent obtainable, or should be an average, taken over previous years. It can hardly be necessary to point out that, if the number of members in a College has changed suddenly within the year, to multiply the new value by the number of years of waiting, and thus to make the recent change have the same effect as if it had occurred many years previously, is to give to the fluctuation far more than its due effect. The obvious answer to this question is, that the number, representing the claim of each College, should be the product of the number of years of waiting and the *average* annual number of eligible members for those years.

Now the average number of members, for a series of years, multiplied by the number of years, is identical with the sum-total of the annual numbers. Thus the “claim” for any given year may be found by simply adding together these numbers, for all the years elapsed since the last election; and, when it is once known for any given year, the addition of the number of members for that year will give the “claim” for the next year.

It is obvious that the two Colleges, whose “claims” in any given year stand highest, are the two who should elect the Proctor for that year.

5. How far ahead the Cycle should be calculated

The third question to be settled is, how long beforehand it is desirable to know what Colleges will be entitled to elect in any given year.

It would seem that three or four years, at the outside, would be amply sufficient notice. It is conceivable that one, who was tolerably certain of being elected by his College in its next turn, might make his plans dependent on the question whether that turn would occur in three years or in four: but it is extremely unlikely that he would care to know whether it would occur in seven years or in eight. In the system here suggested, the rotation of Colleges would always be known rather over four years in advance.

6. How often it would need renewing

The fourth question to be settled is, at what intervals the system of rotation should be re-adjusted, so as to give due effect to the fluctuation, in each College, of the number of its eligible members.

A Cycle of 30 years is undoubtedly too long for this purpose, and it is fairly open to the charge, brought against it by Dr. Moore, that, “granting that it was

approximately fair when first made out, it would almost certainly be far from corresponding with existing facts long before the Cycle of 30 years had run its course.”

A Cycle of 5 years, re-adjusted once in five years, is less open to this charge, but labours under one of two serious disadvantages, which may be best stated as a dilemma. If it were computed on the most recent data, it could only be published just before coming into use; so that, towards the end of each period, there would be no certain information to be had as to future elections. If, on the other hand, it were published four or five years before coming into use, it would, though quite sufficiently in accordance with the facts in its first year, become less and less so from year to year; and there would always be a sudden change, with the introduction of each new Cycle, from the use of *data* ten years old to that of *data* only five years old.

But, granting that it is necessary to base the computation of claims, for any one year, on the *data* of five years back, in order that the names of the Colleges electing in any year may be published five years beforehand, there seems to be no reason for doing more than this. That is to say, if the names for the 10th year be published in the 5th, those for the 11th in the 6th, and so on, the order of rotation will always be known for the next 5 years, while the *data*, used in computing the claims for any one year, will always be neither more nor less than 5 years old.

7. Account of the Method suggested

The principle here adopted is that, in the year 1900 for example, the claims for the year 1905 shall be computed and published; and that the claim of each College shall be the product of two numbers—one, the number of years elapsed, in 1905, since its last turn, the other, what is assumed as its average annual number of members for those years, though it will really be a similar average taken, from the year 1900, back to its previous turn.

It would be desirable for Council to publish in each Michaelmas Term, along with the list of members of Congregation, the names of the ten Colleges entitled to elect during the next five years. Also, as it would be well to fix on a definite *day*, for which each College should take the annual caucus of its eligible members, Michaelmas Day might be found convenient for this purpose.

In order to commence the new system in Michaelmas Term, 1886, it would be necessary to compute and publish the claims for 1889, 1890, and 1891. Those for 1889 would have to be computed by multiplied together, for each College, the number of years elapsed, in 1889, since its last turn, and the best attainable average of its annual number of eligible members. It would probably be most satisfactory, instead of going back into past years, to accept the returns for Michaelmas Day, 1886, as the average required.

This method would be easily worked out of all but 3 of the 22 Bodies contemplated in the new Statute.

But in the case of Keble and Hertford Colleges and the body of Non-Collegiates, a different method would be needed, since there is no previous “turn” to date from. For each of these Bodies an ideal “period of waiting” must be assigned: and this would equitably be half of the interval of years at which the “turns” of that Body ought to recur. To calculate this interval, it would be necessary to add together the average numbers of eligible members of *all* the Colleges, and to divide their total by the number of the College in question;

and then to halve this quotient, since *two* Colleges elect in each year. This may sound complex; but, since the number of eligible members is used first as a divisor and then as a multiplier, it may be ignored altogether, and the practical result is to assign to each of these three Bodies, as its claim for 1889, one-fourth of the total number of eligible members in the University. The same process would serve whenever a new College had to be added to the list.

In the (probably rare) event of the two “claims” occurring, the rule might be adopted of giving precedence to the College that had waited longest: but this rule should be reversed, if it happened again with the same two Colleges.

The Table published (say in the year 1900) might be of the following form:—

<i>Colleges.</i>	<i>Claims for 1907.</i>	<i>Members in 1903.</i>	<i>Claims for 1908.</i>
A	50	10	60
B	5	5	10
C	60*	20	20
D	55	5	60*
E	30	15	45
F	30	10	40
G	25	5	30
H	20	20	40
J	20	10	30
K	35	5	40
L	60*	15	15

The number in the 2nd column would, except for the 2 Colleges electing that year, be added to those in the 3rd, to give those in the 4th. For these 2 Colleges, the numbers in the 3rd would be repeated in the 4th.

The names of the Colleges entitled to elect Proctors for the years 1904 to 1908 should be appended to this Table.

The publication of such a Table would enable any one to calculate for himself, approximately, the order of rotation for any number of future years. This would of course be only approximately correct, since it would have to be done on the assumption that the number of eligible members, in each College, would undergo no change during the period for which the calculation was made.

For the next twelve years, such a Table would be as follows:—¹

<i>Colleges.</i>	<i>No. of Members.</i>	<i>Claims for</i>											
		1908	1909	1910	1911	1912	1913	1914	1915	1916	1917	1918	
A	10	60*	10	20	30	40	50	60*	10	20	30	40	
B	5	10	15	20	25	30	35	40	45	50	55	60*	
C	20	20	40	60*	20	40	60*	20	40	60*	20	40	
D	5	60*	5	10	15	20	25	30	35	40	45	50	
E	15	45	60*	15	30	45	60*	15	30	45	60*	15	
F	10	40	50	60*	10	20	30	40	50	60*	10	20	
G	5	30	35	40	45	50	55	60*	5	10	15	20	
H	20	40	60*	20	40	60*	20	40	60*	20	40	60*	
J	10	30	40	50	60*	10	20	30	40	50	60*	10	
K	5	40	45	50	55	60*	5	10	15	20	25	30	
L	15	15	30	45	60*	15	30	45	60*	15	30	45	

¹The original might use some other word.

After which the series would recur in the same order.

It may be noted that, in the above “circulating period of twelve years, the numbers of turns, assigned to each College, is proportionate to its number of eligible members.

8. Suggested form of Statute

“Whereas it is expedient to revise the Procuratorial Cycle and to determine the qualification of the members of the several electing Bodies, the University enacts as follows.

In *Statt. Tit. XVII. Sect. iv, § 1* (p. 218, ed. 1884) shall be struck out, and the following new subsection shall be substituted:—

1. Of the Election of Proctors

There shall be two Proctors, who shall be elected annually on the Wednesday after the first Sunday in Lent. In and after the year 1889, they shall be elected by the following Bodies, in an order to be determined as hereinafter provided.

Each of the above-mentioned Bodies shall, immediately after Michaelmas Day, in and after the year 1886, furnish to Council a list of such members of Convocation as were on that day members of the said Body and eligible as Proctor. And Council shall publish, in Michaelmas Term, in and after the year 1886, the names of the ten Bodies entitled to elect Proctors for the five years next ensuing.

The names for the year 1889 shall be determined by multiplying, for each Body, the number of its eligible members by the number of years elapsed, in 1889, since its last turn. The products shall be taken as the claims for that year, and the two Bodies, whose claims stand highest, shall elect the Proctors for that year. And the claims for each subsequent year shall be computed by taking, for each Body, the last-returned number of its eligible members, and adding thereto its claim for the preceding year: but such addition shall not be made for the two Bodies electing in the said previous year.

To each of the three Bodies not included in the present Cycle, namely, Keble and Hertford College and the Body of Non-Collegiate Students, shall be assigned, as its claim for the year 1889, one-fourth of the total number of eligible members in the University. And the same rule shall serve for any other College which may hereafter be added to the above list.

If the name of any member of Convocation appear in more than one list at the same time, it shall be counted only in the list of that Body in which such member pays, or has compounded for, his University Dues.

The effect of the proposed Statute will be that the number, taken as the claim of each Body to elect in any given year, will be proportional to the number of years elapsed, in that year, since its last turn, and also to the average annual number of its eligible members. Hence the number of turns, assigned during any given period to each Body, will also be proportional to the average annual number of its eligible members.

The effect of assigning to each of the three Bodies, Keble and Hertford Colleges and the Body of Non-Collegiate Students, as its claim for 1889, one-fourth of the total number of eligible members in the University, is exactly the same as if each had had a previous turn, and the number of years elapsed had been, in each case, one-half of the interval at which the turns of that Body ought to recur.”

12.26 Three Years in a Curatorship

Source: Three Years in a Curatorship

By One Whom It Has Tried

Preface

Long and painful experience has taught me one great principle in managing business for other people, viz., if you want to inspire confidence, *give plenty of statistics*. It does not matter that they should be accurate, or even intelligible, so long as there is enough of them. A Curator who contents himself with simply *doing* the business of a Common Room, and who puts out no statistics, is sure to be distrusted. "He keeps us in the dark!" men will say. "He publishes no figures. What does it mean? Is he assisting himself?" But, only circulate some abstruse tables of figures, particularly if printed in lines and columns, so that ordinary readers can make nothing of them, and all is changed at once. "Oh, go on, go on!" they cry, satiated with facts. "Manage things as you like! We trust you entirely!"

Hence this pamphlet.

*C. L. Dodgson.
Curator.
Ch. Ch.
March, 1886.*

1. Of Airs, Glares, and Chairs

"Pant in your great chairs of ease."

The Committee (consisting of Mr. Harcourt, Mr. Prout, Mr. Stewart, and Mr. Thompson), who were appointed a year ago "to consider the whole question of lighting and ventilating," have grappled with, and (it is hoped) pretty nearly solved, the two problems proposed to them—though but scantily supported by the sympathies of Common Room, who, though ready enough to ventilate our proposals as to "light," have altogether made light of our "ventilation."

The latter subject was discussed, first, by the full Committee, when the plan most favoured was that of introducing "Tobin" tubes, opening at the top of the wainscot; secondly, by Mr. Harcourt, the Curator, and Mr. Axtell; and thirdly, by the Committee again, who unanimously approved the plan, suggested by Mr. Axtell, of an oblique opening, *à la Tobin*, pierced through the E. wall of Common Room, and with a valve inside, which might be opened or shut at pleasure. Accordingly the Curator, after obtaining the necessary permission from the G.B., ordered this to be done. The valve has not only served the purpose for which it was designed—it has also furnished some most interesting illustrations of the tricks the human imagination can play, and the influence it has over physical sensations. The Members of C.R., who sat on the E. side of the room, were at first terrified of the prospect of so much cold air beating down on their unsheltered heads. "It is *hair* we need—not *air*!" Thus they moaned in their anguish. But the strangest part of it was that it was usually when the

Quoted from *Timon of Athens* by William Shakespeare

valve was *shut* that they felt most keenly “the pelting of this pitiless storm”: when it was open, they made no complaint. The conclusion seems to be, that the additional ventilation has not *really* produced any inconvenience, while it has conferred an undoubted benefit, by increasing the longevity of Members of the C.R.—as is plain from the simple consideration that they are, all of them, six months older than they were when the change was made.

Quoted from *King Lear* by William Shakespeare

The question of “light” has been very fully and fiercely debated by the Committee, and the suggestions made have been so many, and so contradictory, that the great mind of the Curator nearly gave way. The Caterer of the High Table suggested “Hesperus” lamps, as the best for our chandeliers: and Mr. Stewart proposed that two Hesperus should be procured, to stand on the table. Both these ideas, though approved at first, were afterwards modified: the “Hesperus” lamps, for the chandeliers, being opposed by the Vicar of Binsey, who strongly recommended “Defries” lamps instead; while, for the table, it was agreed to request Mr. Thompson to select one of Hinck’s “Duplex” lamps—it being understood that that kind combined high art with high illumination. Mr. Thompson kindly did so, and the result has been “a thing of beauty,” which is also (probably) “a joy for ever,” but it has not yet been tested quite long enough to prove this.

Quoted from *Endymion* by John Keats

It was further agreed to try the experience of a *central* chandelier, instead of the two side ones, which were complained of as too dazzling by those who had to sit *facing* them. This was tried, and the general opinion of C.R. seemed to be that *two* lamps, in this position, gave all the light needed: this, however, was not the view of the Curator of Livings, who complained that there was not enough light to read the evening papers. With a view to increasing the light, though still retaining the central position, the Committee agreed to the plan of adding two branches to the chandelier, and supplying it with *four* small Defries’ lamps instead of *two* large ones. This plan the Curator undertook to carry out: but found, on enquiry, that no smaller lamps of that kind were made. He thought, however, that *some* increase of light might be effected by substituting ground-glass globes for the so-called “opal” ones (something like transparent china) then in use; and he took the opportunity of substituting globes of the “Lotus” shape for the ordinary spheres.

So the matter rests at present: but if anything like a general wish be found to exist for yet *more* light, the Committee will do their best to satisfy the cry of ἐν δὲ φάει καὶ ὄλεσσον.

Quoted from *Iliad* by Homer

To meet the wishes of the more recumbent Members of Common Room, two easy-chairs have during the past year been added to our furniture: and the history of the transaction is not without a certain financial interest for those who believe in the marvellous cheapness of Co-operative Stores as compared with ordinary shops. The first chair was procured from the Army and Navy Stores, by Mr. R. E. Baynes and Mr. J. B. Thompson (for whose kind trouble I take this opportunity of expressing the thanks of C.R.), and it cost, with packing and carriage, £7 18s. 0d. I thought it possible that, if we ordered (say) three more, we might get them at a rather cheaper rate—in fact Mr. Thompson had told me that the maker had said that, in the event of our ordering more chairs, “he would put the price as low as possible, in the hope that if his work gave satisfaction, C.R. would give him another trial.” Accordingly I wrote to the Stores to enquire how this might be, and at the same time I asked Messr. Badcock (whom we have employed for many years, and whose work, though certainly dear, is uniformly

excellent in quality) to examine the chair, and report at what price they would undertake to make us three more exactly like it in every respect. Had they named the same price as the Stores, or even a rather higher price, I should have felt myself justified in ordering the second chair (C.R. decided on having only *one* more) from them: but the actual result was something of a surprise. The Army and Navy Stores declined to make *any* reduction in their charges, whereas Messr. Badcock undertook to make the three chairs for £7 2s. 6d. each, being 15s. 6d. less than what the first chair had cost us, thus effecting a saving of nearly 10 per cent.

2. De Re Nummaria

"I love Sixpence, pretty little Sixpence!"

Quoted from nursery rhyme

On this topic I am nothing, if not tabular. In the first Table, the items (except those in the last line) are given in round numbers, as their *exact* values are unattainable. When once the Milk (for instance) has been fairly started on its Milky Way, I have no means of tracing *exactly* how much of it was consumed in one place and how much in another: but I have taken a good deal of trouble to estimate the proportional values as nearly as possible. My object, in printing these two Tables, is to "show case" for the changes I wish, with the consent of C.R., to make in the charges for Dessert, and for Coffee after Dessert.

Food:—Expenditure and Receipts.

	Sent to Rooms.			5 p. m. Tea.			Dessert in C.R.			Coffee in C.R.			Totals		
	£.	s.	d.	£.	s.	d.	£.	s.	d.	£.	s.	d.	£.	s.	d.
Tea	2	0	0	3	0	0							5	0	0
Coffee	4	0	0							4	0	0	8	0	0
Sugar					10	0	1	5	0		15	0	2	10	0
Milk	2	0	0	3	5	0				5	10	0	10	15	0
Cake, Fruit, &c.	20	0	0	2	5	0	31	15	0				54	0	0
Totals	28	0	0	9	0	0	33	0	0	10	5	0	80	5	0
Charged in Bills	29	18	9	9	14	6	27	10	1	21	4	6	93	9	10

In the 2nd column, the charge is, apparently, more than £5 too much: but it must be remembered that an extra sum of £4 10s. is paid annually as "wages," to meet the extra trouble caused by this new institution: this reduces the excess to 16s. 6d.—a very reasonable margin.

Adding this £4 10s. to the "total expenditure," we find that the profit made, on the whole, is at the rate of 10 per cent.

The charge for Dessert is too low, while that for Coffee in C.R. is much too high. I propose to modify them as follows:—

	Dessert in C.R.			Coffee in C.R.			Totals		
	£.	s.	d.	£.	s.	d.	£.	s.	d.
Present charge per head			3			4			7
Expenditure in 1885	33	0	0	10	5	0	43	5	0
Charged in Bills	27	10	1	21	14	6	49	4	7
Proposed charge per head			4			2			6
Resulting Charge in Bills	36	13	5	10	17	3	47	10	8

which makes the profit, on the two items together, just 10 per cent.

No financial statement can possibly be complete without a word or two about wine. For surely any Curator, worthy of the name, would be found, if physically tested by one Lee's Reader, to possess a density varying directly, and a gravity varying inversely, as the potency of the Port—if tested anatomically by a second, to have the word 'WINE' neatly emblazoned on his heart—and, if finally submitted to quantitative analysis by a third, to consist principally of $C_4H_6O_2$.

There is not, however, anything specially thrilling to say about this deeply-interesting subject. Water-drinkers will be pleased to hear that we have spent during the past year, with all the recklessness of several Grand Old Men, no less than £768 18s. 9d. on wine, and that the result of this skillful financial operation has been a deficit, on the year's account, of £44 19s. 9d.—while the wine-drinkers will be equally delighted to learn that the stock of pints of *Y'quem* has this year reached the proud position occupied, two years ago, by *Madeira (B)*, and that we have enough in hand to last, at the present rate of consumption, for an infinite number of years.

On one point a few words of explanation seem desirable. It occasionally happens that wine is supplied from our Cellar to Members of C.R. residing at a distance from Oxford. This is quite an exceptional transaction, performed as a special favour; and all such applications are referred to the Curator for special sanction. Still, the thing does sometimes occur, and Members, receiving wine in this way, may perhaps be puzzled to find that it costs them decidedly more than it would to get the very same wines from a London merchant, or to get them from C.R. if they were residing in Oxford. In the first place (this affects Oxford and country residents alike), we charge more for our wines than we pay for them: the excess (which is calculated on all our wines on a uniform principle) is required to meet the incidental expenses of the Cellar. In the second place, we charge country purchasers for *bottles*: this is because we have to purchase bottles, largely, for our own use, those returned in College not being enough for the purpose, so that, when any leave us for distant climes, with the sad farewell words "*vestigia nulla retrorsum!*," we cannot afford to let them go for nothing. In the third place, we charge country purchasers for *packing*: this is because we do not keep cases, &c. in stock, so that, on those special occasions, we have to buy them: it is of course optional for any such purchaser, if he happens to have cases of his own or likes to buy them for himself, to send them to Ch. Ch. to receive the wine applied for, and to retain them when sent back to him.

These charges may perhaps be thought to compare unfavourably with those of wine-merchants, who offer the very same wines at less cost. Let it be remembered, however, that we do not recognise it as a function of C.R. to send wine into the country *at all* (were we to do so, we should need a far larger Cellar, and should have to sink a far larger capital in wine): and, in the second place, that we have no ambition to undersell the wine-merchants, but are only too glad that Members in the country, who find they can get their wine from London more cheaply than from our Cellar, should do so. It is about as much as we can manage, to supply the wine needed in C.R., in College rooms, and in Oxford.

I thought it well, as this matter does not seem to be well understood, to take this opportunity of explaining it fully and once for all.

There is one item in the Accounts which will, I fear, be almost painfully interesting to Members of C.R. It is the deficit at the end of the year. The

Quoted from the motto of Buckinghamshire, based on *Ep. I, 1* by Horace

thoughtful reader, observing that the year opened with a balance in hand of £280 5s. 10d., and that it closed with a deficit of £44 19s. 9d., will be tempted to exclaim “Oh where, and oh where, is our £325 5s. 7d. gone?” And he will hastily refer to p. 1801 of the previous pamphlet, and will whisper “Perhaps it was no joke after all? *He has been assisting himself!*”

Quoted from nursery rhyme (modified)

I think I can offer an explanation less blighting to Curatorial reputations. The value of the wine, bought in during the year, was £768 18s. 9d.: the value of the wine sold was £439 3s. 9d. Consequently, we had £329 15s. 0d. worth of wine, at the end of the year, more than we had at the beginning.

Now, for this £439 3s. 9d. worth of wine, which we sold, we charged (for I am not going to miss this opportunity of giving the reader yet another piece of statistics) £520 12s. 2d. “And where does all this handsome profit (more than 18 per cent) go to?” quoth the reader. The answer is “it goes to meet the expenses of the Cellar.” The sum to be accounted for is, as you see, £81 8s. 5d. Of this sum, £38 1s. 3d. has been actually spent on such items as lamp-oil, bottles, corks, &c.: and the remaining £43 7s. 2d. I consider a very moderate contribution, from the wine-bibbers, towards the total of £120 “wages,” considering how much of the labour, thus paid for, belongs to the category of “wine.”

There is one item of our expenditure, which I should be grateful to have the permission of C.R. to increase rather further than I can venture to do on my own responsibility. In order to have a full and satisfactory record of the statistics of C.R., I keep several ledgers myself; and this entails on me (more than it would on a better arithmetician) many hours in the year of almost mechanical work—hours which I may confess, even when addressing friends whom I am glad to be of service to—I spare with difficulty, as it keeps me from work of my own with which I am very anxious to go on. Hitherto I have got a clerk to take a little of this work off my hands, at the cost of about one pound a year: but if C.R. would not object to my spending (say) five pounds a year on getting a little more assistance, it would save me many valuable hours, and would be a great relief to me.

3. De Combibonibus

“Post amphoram sedet ater Curator.”

Quoted from *Carmen* 3, 1 by Horace (modified)

“Use every man after his dessert, and who shall scape whipping,” sings a certain Swan—meaning, no doubt, that it is only *after* that refection, when physical vigour is at its lowest ebb, that such an operation can safely be attempted. It is to be hoped, then, that some such *mollia tempora* may occur to the reader, for receiving the melancholy announcement I have to make, regarding the *Pichon Longueville* 1875, which we are now drinking at Dessert, apparently with much satisfaction. I find that our present stock can hardly meet the demands of Common Room and College Rooms for three years longer; and we must then begin drinking the *Rauzan Segla* 1881, though no doubt it would be all the better if we could keep it another year or two. Under these circumstances, in order to make the *Pichon* last as long as possible, the Committee have settled to stop its going out of College in future. Members living in Oxford will, it is hoped, not take it as a hardship to have to replenish their cellars, with dessert-Claret, by buying it direct from the merchant. Members living in the country can scarcely construe it as a hardship in any sense, considering that

Quoted from *Hamlet* by William Shakespeare

it is against the standing rules, and only possible by special permission of the Curator, for any wines whatever to be sent from our Cellar out of Oxford. The following resolution was passed at a regular C.R. Meeting:—"Ordered, that the privilege of taking out wine from the Common Room Cellar be limited to Oxford Residents paying £2 2s. subscription, except in the case of the Chaplains, who may enjoy the same privilege with their subscription of £1."

In furtherance of the same object, I try so to regulate the orders for this fluid at Dessert, that there may not be an unnecessary amount opened and thus (partially) wasted: for it must be remembered that Pichon, once opened, cannot be used at Dessert next day, but has to be consumed as dinner-Claret. Thus, I try to avoid having a whole bottle opened when there is only *one* biburient to consume it (for alas, we are no longer *virī merioris aevi*, when even "six-bottle-men" were not unknown!), or even a pint when there is *none*. I calculate that, if an extra bottle of Pichon be ordered in, and only *two* glasses taken, those two glasses cost 3s. 1d., of which 1s. 4d. is borne by the biburients present, and the remaining 1s. 9d. by C.R. It is, I think, superfluous to say, that my only motive in this is to save C.R. from needless waste of property. *Personal* interest I have none: such an occurrence *might* possibly raise my individual charge, for the evening, one penny higher—but I can honestly say I do not care twopence whether it does so or not.

One other combibulous topic I will venture to touch on—with some timidity, and yet feeling that it is one that *only* the Curator can well discuss. The ancient custom (a *really* ancient one, dating even further back than my predecessor's accession to office), of dressing for dinner, seems to be dying out—which I think is to be regretted. I do not plead for it as an aesthetic virtue, or even as a social propriety: I rest my appeal simply on the appearance such an omission must present to our guests. *They* come, almost without exception, in evening-dress, and I think it must strike them as strange that some of their hosts appeal in morning-dress. I say "their hosts" advisedly, for I have always felt (long before I became Curator) that the guest of *one* Member of C.R. is virtually the guest of *all*. As Curator, I am specially glad to act on this principle, and am always pleased when any Member puts his friend next me in Common Room, and lets me help to make him welcome: but I used to feel it, even in those earlier days of happy obscurity, that I look back on with such agonising regret! I hope I have not handled this topic so roughly as to wound the feelings of any Member, however auroral in his costume.

4. De Meri Meritis

"What is this? Mutton?"

Mais revenons à nos moutons. I have yet a word to say regarding one of our choicest wines, the "Mouton" Claret. On this subject we, the Wine-Committee, have displayed a nervous trepidation—not to say a hysterical *hyperæsthesia*—absolutely morbid. About a year ago a panic seized us. One or two bottles had turned out bad ("corked," or whatever it might have been): and suddenly the cry went up "All is lost!": wild words, such as "It is past its prime!" "It is worth only three shillings a bottle!", hurtled in the air: the very constitution of the Cellar was affected for a time: symptoms of diminished circulation and of slight consumption showed themselves. The Curator trembled, but would not quit

Quoted from *The Taming of the Shrew* by William Shakespeare

the gory field in such frantic haste, or give the order (which the then frenzied Committee would have hailed with delight) to empty the remaining bottles into Mercury—thereby certainly demoralising, and probably destroying, its scaly inmates. “We are but amateurs,” he said to himself: “and, though Christ Church Students, we are still fallible! Let us see what the experts say.” Thereupon he submitted some of the wines to a professional “taster,” Mr. F. Snow, of the firm of Snow and Co. That eminent firm seems to have resolved itself, in the service of C.R., into a “tasting-committee,” and their joint verdict will, I think, be read with interest by other Members of the C.R., besides ourselves, the scared Committee.

“The wine maturing very well: slightly coarse, almost imperceptibly ‘stalky’: will be in prime probably about three or four years: good useful wine.

“The term ‘stalky’ means a slight taste of the stalk of the grape, which sometimes gives a slight acrid taste: but in this case it is so *very* slight, that no one but a practised expert would notice it.

“Tell the gentlemen of Common Room that they have very fair property in this wine, and that the idea that it is ‘going off’ is wholly erroneous.”

This was very satisfactory; but the phrase “will be in prime probably about three or four years” seemed ambiguous: it might be intended for “is now in prime and will remain so *for* three or four years,” or “will reach its prime *after* three or four years.” Also a new terror had seized us: a few bottles, which had proved sour (“vinegar” was the Committee’s epithet), were supposed to owe their ruin to bad corks: and the Committee advised (we are only amateurs, remember!) that the remaining 160 bottles (or at least all whose corks seemed in doubtful condition) should be recorked.

Here again the Curator, afflicted with a chronic distrust of amateur theories about wine, referred to head-quarters for advice: and this is what Mr. F. Snow says in reply.

“When we wrote ‘will be in prime probably about three or four years,’ we meant that the *zenith* of its prime will be reached in that period; after that we opine that it will deteriorate.

“In other words, the wine is in thorough good order for present drinking, and will improve for the next three or four years, when the development of its several chemical constituent parts, such as tannin, flesh, saccharine matter, &c. &c., will cease.

“I am puzzled with what you tell me regarding some of the bottles turning out so badly, *which certainly ought not to be*. Perhaps this particular wine was bottled in France? The corks used in France are nearly always of inferior quality. And I attribute these little *malheurs* either to dirty bottles or cheap and inferior corks, which have not withstood the test of time.

“On no account think of having this wine recorked: the result would be most disastrous: you would have 160 bottles of vinegar, instead of the percentage now in your bin. Claret is unlike Port, Sherry, Madeira, and wines of high alcoholic strength. Decomposition would at once ensue, and all would be spoiled.”

What effect the perusal of these remarks of an expert may have on C.R. generally, I know not. To me, curatorially, they are cheering beyond words. For, though I share with the rest of the Committee the humiliation of being treated as fallible—the having the conviction forced upon me that I may (to use the eloquent words of the author of “Hugh Heron”, “that I may possibly be, on rare occasions, and in the subordinate details of some trivial question, partially

mistaken”—yet this agony is compensated by the removal of an incubus! The devouring anxiety (members of the C.R. may have noticed its crushing effect on me, producing a lambent—not to say sheepish—style of conversation?) on the subject of “Mouton” is now wholly and at once removed! Those, who have not felt the anxiety, cannot fully realise the relief. The wretch, who groans with a bad tooth, is grateful to the dentist who extracts it for him: but were the same dentist to rush, pincers in hand, into the street, stop the first passer-by, and wrench from his jaw some perfectly *sound* tooth, similar expressions of gratitude could not reasonably be looked for.

5. De Liciæ Statisticæ

“*Solvuntur risu tabulae.*”

Quoted from *Serm. 2*
by Horace

There is not much to say about the third Table, which I have reserved as a *bonne bouche* for the now jaded reader. If he does *not* peruse it with a breathless delight, and does *not* make it the solid food of his waking thoughts, the golden ideal of his dreams—why, all I can say is, he must have some *other* subject which interests him more.

Three wines occur in this Table, which are not yet entered on the wine-card, and have not yet had any values “assigned” to them by the Wine-Committee. These are the *Margaux*, the *Rauzan Segla*, and the *Médoc*/81. The values I have assigned to them are therefore entirely conjectural, and it must not be too hopefully assumed that the Wine-Committee will adopt them.

Enough, enough! I have said my say, gentle Reader! Turn the page, and revel, to your heart’s content, in

12.27 Remarks on Report of Finance Committee

Source: printed 1886

[Strictly Confidential.]
[For Members of the Governing Body only.]
 Christ Church,
 March 15, 1886.

Most respectfully, but most earnestly, I would urge on every Member of the Governing Body, at a critical time in our fortunes like the present, and when matters of such importance are under debate, to endeavour *to understand the question for himself*, and not to accept at second-hand the opinions of others. I am very loth to come forward in a matter where I feel my familiarity with such subjects, and my power of dealing with them, to be so inadequate: but I think I ought to do my best.

The main matters to consider are:—

- (1) Our needs, present and future;
- (2) The economies to be effected with a view to meeting those needs.

I will first make a few remarks on the Report of the Committee, and then state, as briefly as I can, the conclusions which I have come to myself, as a result of the enquiries I have made.

1. The Report

In paragraph 1, it is stated that, after payment of first-charges, Sinking Fund, and interest on Loans, our available income does not exceed £12,000.

This any one can test for himself by referring to the Statement of Accounts for 1885.

	<i>£.</i>	<i>s.</i>	<i>d.</i>	<i>£.</i>	<i>s.</i>	<i>d.</i>
Rents				44,765	10	1
Less Insurance	350	10	11			
Surveyor	938	18	0			
Rates and Taxes	1077	10	8			
Annuities	1563	0	7			
				3930	0	2
				40,835	9	11
Deductions:—						
First-charges:—						
Cathedral	43	6	8			
General Repairs	806	6	8			
Chapter	15,500	0	0			
Greek Professor	500	0	0			
Sinking Fund	400	0	0			
Interest on Loans	5858	15	8			
				23,108	9	0
Remaining “available income”				£17,727	0	11

In paragraph 2, they speak of “the risks and depreciations of an estate of nominal value of more than £50,000 a year.” It should be remembered that of

this £50,000, £20,000 is the Tithe Rent Charge: and that, although this will undoubtedly depreciate for the next year or two, no great unexpected depreciation can take place in it.

It seems to me that this paragraph might be more accurately worded thus—“Consequently, £17,700 is liable for all the risks and depreciations of an estate of nominal value of £30,000 a year.”

This may, or may not, be a dangerous state of things. I doubt if the Committee, or any one else, could name the exact sum which would be absolutely satisfactory for meeting these risks. To take an example from the other Colleges: the “available external income” of S. John’s appears to be about £5000, to meet “all the risk and depreciations” of an estate of the nominal value of about £20,000 a year.

As compared with this, our prospects are favourable: but I have not pursued the comparisons, as it seems clear that the general conclusion (on whatever figures it may be based) that, in the face of probable further depreciation, we ought to economise our resources as much as possible, is quite unassailable.

In the last paragraph on p. 1, it is stated that a balance of £2373 1s. 11d. is due to the Tuition Fund for 1885. It should be remembered that £1,315 of this is merely “due” as having been voted, in May, 1885, to be paid as “Capitation Fees” out of the Corporate Revenue for that year, and that, if paid, it would be at once transferred to the Pension Fund. Whether it might not be desirable, under present circumstances, to rescind that vote, is matter for consideration. It depends, largely on what need there is, at present, for augmenting the Pension Fund (a matter I shall discuss further on). But in any case it would, I hold, be quite absurd to consider this matter as if the Electoral Board were some external creditor, ready to exact his full legal rights: this is simply, as it were, a transaction between the House and itself, to be carried out, or modified, as may be best for the interests of the House.

In the third paragraph on p. 2, it is recommended to borrow (if it be found necessary) the £2,000 Building Loan, “so as to be repaid in a term of not more than five years.” No reason is stated why we should choose a moment of temporary embarrassment to lay an *unnecessary* burden on the next five years, instead of taking the usual course and so spreading it over 30 years allowed by the Act. In that case the annual instalments would be only £66 13s. 4d.: whereas, if the Loan had to be repaid in 5 years, the Treasurer might be obliged to ask for another loan before the repayment of the first was completed.

In the next paragraph, the Committee recommended that “separate banking accounts should be kept for the Corporate Funds and the Trust Funds.” Such is not the view of our Auditor’s assistant, Mr. Carr, with whom I have had two interviews on this subject. Though strongly of the opinion that we ought not to draw upon one Trust to meet the deficits of another, he yet sees no objection to a Trust balance being on the wrong side of the ledger, where the Corporate Fund temporarily supplies the deficit: nor does he see any objection to a Trust Fund temporarily supplying, in a similar manner, a deficit in the Corporate Fund. He says therefore that, if a separate banking account be kept for the Corporate Fund, a separate banking account ought also to be kept for *each* of the Trusts. (He has seen, and approves of, what I have here said. He incidentally mentioned that he is now engaged in trying, with regard to one of the Colleges for which he is auditing, to reduce their accounts “to the Christ Church form,” which he evidently regards as a worthy model. At his suggestion I wrote to the Auditor

himself, to make sure that he also approved of what I have said. It appears to be the case that he does approve, though I have not succeeded in making my question quite clear to him. As there is no time, now, for further reference to him, I think it best to quote his exact words: *valeant quantum valent*. "I am not sure that I fully understand the matter. Speaking generally, there ought always to be a sum of money in hand sufficient to meet the balances due to the Trusts, but this of course does not render a separate banking account necessary either for the whole or any one of the Trusts. A number of banking accounts would I am afraid lead to considerable complication in keeping the accounts. Like many other questions, there is a good deal to be said on both sides.") To recur once more to the example of other Colleges, I learn that Balliol has borrowed about £26,000 of its Trusts, with the knowledge of the Visitor, and the approval of the Auditor. Magdalen has, similarly, borrowed more than £40,000 of its Trusts.

To exclude all further possibility of one of our accounts thus helping another to tide over a temporary difficulty, seems to me much as if an Alpine traveller should insist that, whenever they reached a difficult place needing the use of the rope, every one should let go of it.

In the paragraph numbered (1), near the foot of p. 2, it is stated that the balance of the Pension Fund, at the end of 1885, was £581 16s. 9d. This might easily mislead any reader, who did not refer to the Schedule for himself. He would then see that this Fund already possesses an invested capital worth about £4750: and, further, that the Tuition Fees exceed the Tutorial expenses by about £1300 a year, the whole of which excess may be paid over to the Pension Fund.

The suggestions in paragraph (2) to (5) are all, I think, most reasonable, except that such an economy as taking off 5 p. c. from Studentships would only yield (if it could be done in all cases, which it cannot) about £280 a year: it is a very small measure of relief, and, if it were left to individual Students to give or not at pleasure, it would resolve itself into a sort of subscription-list, and would fare but badly after the first enthusiasm for economy had passed away.

In the last paragraph of the Report, it is stated that the Committee "consider the cost of collection and management and the law expenses (in all about £4300) to be excessive."

In the first place, their estimate of the total amount is "excessive." They have included, in the Treasurer's pay, the £300 he has by a vote of the Governing Body on account of the Stewardship, formerly held by him: this has nothing whatever to do with any one of the three headings named by the Committee, and cannot fairly be counted. Again, they have valued, at £225 a year, a house which could not possibly be let, unfurnished, for more than £150: and they have taken the whole Law Bill, £560, whereas nearly half of it consists of exceptional items (chiefly business at Budworth) not likely to recur: £300 would be a much more reasonable estimate for its average amount.

However, making these deductions, let us allow that the total is about £3700. The next question is, is this "excessive"?

To judge by the reductions proposed in the last sentence of their Report, it would seem that it is only the "collection" and "law expenses" they think excessive: but, as I see they name "management" also, I conclude that they consider the present Treasurer and his clerks to be overpaid.

Now, first, as to "Collection" being made in future, as they suggest, "through the Treasury." Is this practicable?

It should be remembered that, to collect tithes, it is absolutely necessary

to hold a tithe audit in the place where the tithes accrue. A tithe dinner would perhaps bring together a good many of the tithe-payers: but many would remain to whom a personal application would be necessary; and this would entail many visits to the place. Local collectors are, in most of our business, indispensable: and when comparison is made (as I understand the Committee have done) between ourselves and other Colleges, the special circumstances of the individual cases need to be taken into account.

Again, as to small rents, it is absolutely necessary (as perhaps the Committee already know) to have some go-between, some one more in the position of the rent-payers, who can be going constantly among them, and extracting the payments, piecemeal, as he can. To delegate such work as this to our Treasurer would indeed be "to cut blocks with a razor."

But is it possible, even while employing collectors, to get the work more cheaply done? Our collectors receive, on an average, about 5 p. c. I understand that the Committee name 3 p. c. as a fair amount. Let us consider a few instances.

The Leeds Tithes amount to about £1000 a year. We had always paid, up to about 5 years ago, $12\frac{1}{2}$ p. c. for collecting these Tithes (amounting to about £1000 a year.) Mr. Paver resigned this business, on the ground that he could not do it for the money. Mr. Castle then undertook to do it for 10 p. c.: but, after trying it for a year or two, he came to say he really could not continue to do it for less than $12\frac{1}{2}$ p. c.; which arrangement was agreed to by the Governing Body.

Take, again, the Harrow Tithes, amounting to upwards of £800 a year, for which we pay 5 p. c. No agent would undertake to collect for so little as 5 p. c., unless he were employed by the House in other and more remunerative business as well.

Take, again, the Cheshire Tithes, amounting to upwards of £3000 a year, for which we pay 5 p. c. These require, from their being spread over so large an area, and being in many cases split up into so many small holdings, resident collectors: and the large amount of money involved, entailing the employment of collectors of position and respectability, and capable of providing bonds for large securities, would make it extremely hazardous to entrust the collection of them to less costly hands than the present one.

To take *cheapness* only as a test of a fit collector, seems a rash policy. You may, no doubt, especially in these days of universal depression, get any work undertaken, by *somebody*, for almost any pay you like to offer. The great question is, what sort of man you get, and how the work is done. The *best* workmen are really the cheapest in the long run: it will be a poor consolation, to think that we have saved (say) a few hundreds a year by "accepting the lowest tender," when some exceptionally cheap collector, whom we are proud to secure as "a great bargain," vanishes into space, taking with him two or three thousand pounds of our money!

As to making "reductions in the Law Bill," this is an operation every sane man is only too glad to perform, whenever it is possible: our Treasurer is surely no exception to this universal law.

And lastly, as to the cost of "management" being excessive: by which they cannot mean anything else than that the present Treasurer (receiving £700 and house; say £850 altogether), and the Clerks (receiving £320), are, in their opinion, overpaid. I really doubt whether, in saying this, the Committee quite

understand what they are talking about: I doubt if they quite realise the high quality of the work already done for them by their Treasurer—in bringing our Accounts into such perfect order, and inventing and constructing a set of ledgers, and a system of book-keeping, that are a credit to the House and have won the very highest commendations from competent judges (the University Commissioners, in 1873)—and the unremitting zeal and attention with which he and his clerks are still labouring in the service of the House. I even doubt if they clearly recall the circumstances under which he took his present position, by no effort of his own, but yielding to the wishes of the House, who, in 1875, appointed a Committee “to consider on what terms the services of the Treasurer could be retained”: and who persuaded him, in the interests of the House and at a considerable personal sacrifice, to remain here instead of taking the large living he had just accepted. In the name of Common Sense, let us know a good workman when we have got him. And, having got him, let us not begin asking whether we have screwed down his pay to the lowest possible figure.

2. Our Needs, and how to Meet Them

Our “needs,” other than “first charges” and necessary expenses, arise from our debt, which entails payment of (at present) about £6000 a year interest, besides the expenses of the Sinking Fund.

The debt itself, which now amounts to about £220,000, will, if all goes well, be reduced, by 1894, to about £156,000, which is not much more than two-thirds the present amount. Of course this may be delayed by further depreciation in the value of our estate: such depreciation we can neither measure beforehand nor avert. All we can do is to provide as far as possible for whatever may befall us, by practising, in all we undertake, the strictest economy that is compatible with real efficiency.

It may be necessary hereafter, if harder times come, for the Law to step in, and reduce all the “first-charges” with unsparing severity. But we need not, as yet, anticipate such evil days.

There is, however, one source of expenditure, which threatens, if no remedy be found, to drain our resources to a dangerous extent, by locking up a large amount of capital: this I propose to discuss by itself.

3. The Pension Fund

The object of this Fund it is no doubt desirable to secure—that there shall be pensions available for all suitable cases requiring them. No such cases exist as yet: there is no fear of any such need arising for five or ten years at least, and it may be many years to come before we have more than a couple of pensioners to provide for: and in future times, I think we may reasonably assume that the annual expenditure in pensions will never exceed £1200 or so.

Now to meet this need, what is it proposed to do? Is it to sink, in investments, a capital large enough to provide this sum in the form of *interest* alone, thus relieving our successors of *all* necessity to contribute out of their annual income—an income which will be, compared with *ours*, simply colossal? (For it must be remembered that we are now, at the cost of great sacrifices to *this* generation, enormously increasing the *future* income of the House.) What would be thought of a Government, that should come to Parliament with a proposal

to invest a capital of a thousand millions, in order that its interests might pay the Army and Navy for all future time? Would it not be answered “and why should our descendants pay *nothing* towards their own protection?”

Let us grant then, what seems obvious, that we cannot reasonably be expected to provide, out of the resources of the present generation, pensions for all future generations. The next question is “But is it necessary to provide *anything*?” We must pay pensions out of present resources: cannot future generations do the same? Clearly then can. The Tuition-Fees, whose sole present function is, first to pay the Tutors, and then to swell the Pension-Fund, exceeds the first requirement by about £1300 a year. This by itself would be enough, in any one year, to pay the pensions of that year: or, if a little more were needed, in excess of the £150 a year interest on the already-invested capital, it would always be possible for the House to supplement it by granting, from the Corporate Revenue, whatever was needed, in the form of Capitation Fees, payable to the Tuition Fund, thence payable to the Pension Fund, and instantly available (to quote the words of the Statute, at the end of section XI) “for payment of current pensions.” (For this interpretation of the Statute—viz. that it contemplates the payment of current pensions from *all* of these sources—I have the authority of Sir R. Harington.)

This being so, I venture to assert that a very important “economy” might be effected, by (1) rescinding the vote of May, 1885, of “Capitation Fees” to the amount of £1315; (2) reducing the “Capitation Grant,” not to £1 as the Committee suggest, but to zero; (3) sinking no more capital, at present, in the Pension Fund.

Let me say in conclusion, to anticipate any suspicion that this paper, speaking as it does of our Treasurer, has been inspired by him, that I have written it entirely *proprio motu*, and not at his or any one else’s suggestion. Some of the *facts* I have got from him—some from other sources. As to these, the only reasonable question seems to me to be, not “from whom do they come?”, but “are they true?” For the *opinions* here expressed, I am alone responsible.

C. L. Dodgson.

Preface

As a Curatorial parting gift to friends who, during the past nine years, have so mercifully overlooked the many oversights that I, in my capacity of overseer, have so appropriately committed, I have put together, in a form convenient for reference, most of the Resolutions passed by C.R. during the last thirty years, as well as sundry interesting statistics.

Lest any Members of C.R. should feel unduly elated, on realising that they belong to so resolute a body, it may be well to point out that these Resolutions have not always been allowed to stand. Now and again, C.R. has lapsed into a mood entirely abrogatory and rescissory. In the matter of Wine-Committees, especially, it will be seen, by referring to Chap. I. § 19, (8) (10) (11), that its constant delight has been, Penelope-like, to undo all its own deeds and, whenever it got the chance (see Chap. I. § 19, (12) (13),) the deeds of its own Wine-Committee!

An enthusiastic computator of Averages will discover, from Chap. I. § 19, (1) (8), that the average time, spent by a C.R. Librarian in not completing a Book-Catalogue, is 29 years; also, from Chap. I. § 11, (5), that the average time, spent by a Picture-Committee in not commencing a Picture-Catalogue, is 2 years; also, from Chap. I. § 20, (1), that the average time, spent by a Smoking-Committee in drawing up a report, is 3 years; also, from Chap. I. § 17, (1), that the average time, spent by a Hot-Dishes-Committee in not Drawing up a report, is 6 years.

These, however, are only samples of the many pleasant surprises that lie hidden in the following pages, ready to reward the toil of the careful analyst.

C. L. Dodgson,
Ex-Curator.
Ch. Ch.
August, 1892

Chapter I. C.R. Resolutions, &c.

1. Membership of C.R., Actual

(1) Dec. 17, 1859. Resolved, “that no Senior Student on the new footing, not being an M.A., be admitted a Member of C.R., until he have passed his year of Probation.”

(2) do. Resolved, “that Members of the Old Foundation be eligible as Members of C.R. in their 22nd Term.”

(3) Mar. 13, 1863. Resolved, “that new Senior Students be eligible as Members of C.R. after their year of Probation.”

(4) do. Resolved, "that Bachelor Students on the Old Foundation be eligible as Members of C.R. after their 22nd Term." [see No. (2).]

(5) May 27, 1872. Resolved, "that the Curator do not ask a certain person whether he wishes to be a Member of C.R., but that, if he himself applies for admission, the Curator take the opinions of all Resident Members."

(6) Nov. 30, 1874. Resolved, "that no one, who becomes a Member of C.R. after this date, shall continue to be a Member after taking his name off the Books of the House."

(7) Feb. 28, 1884. Resolved, "(α) that when the Curator thinks it desirable to ascertain the wishes of C.R. with regard to the admission of any person as a Member, this shall be done, after the person has been duly proposed and seconded, by the Curator sending round the names of the person proposed, his proposer, and his seconder, to all Members in residence, with ballot-papers to be marked and returned to him within a stated time; (β) that the person, so voted on, shall not be admitted as a Member unless the proportion of "Ayes" to "Noes" be at least 4 to 1: (γ) that the Curator alone shall examine the ballot-papers, and shall act on the result, but shall not communicate to any one the number of the votes."

(8) June 12, 1884. Resolved, "that Members of C.R., who entered before Nov. 30, 1874, and who have, by ceasing to be Members of the House, ceased to pay Quarterage, shall not be reckoned as being any longer Members of C.R."

(9) do. Proposed, "that the Curator send notice, of the above decision, to those affected by it, offering re-enter them on the Roll, without a fresh Entrance-fee, at any time during the current year, if they are willing to compound for Quarterage." [Carried, *uno dissentiente*.]

(10) do. Resolved, "that those Members of C.R. who, after this date, cease to be Members of the House, shall be retained as Members of C.R., if they notify their willingness to compound for Quarterage."

(11) do. Resolved, "that the offer, named in No. (9), to re-enter names on the Roll, be extended to those who entered on and since Nov. 30, 1874, and who have ceased to be Members of the House."

(12) do. Resolved, "that any one who enters C.R. more than a year after taking his M.A. Degree be charged 2 guineas as Entrance-fee."

(13) Feb. 19, 1885. Resolved, "that, in the preceding Resolution, for 'a year' be substituted '3 years.'"

(14) do. Resolved, "that the Dean and Canons be invited to become Actual Members of C.R."

[N.B. *All of them accepted the invitation.*]

2. Membership of C.R., Honorary

(1) Jan. 19, 1863. Resolved, "that Senior Students under the Ordinance be eligible as Honorary Members of C.R. immediately on their Election."

(2) do. Resolved, "that Students on the Old Foundation be eligible as Honorary Members of C.R. immediately on taking the Degree of B.A."

(3) Ap. 26, 1864. Proposed, "that the Curator find out whether the Dean and Canons would like to be Honorary Members of C.R., and that so many of them as wish it shall become so." [Carried by 8 to 2.]

[N.B. *All of them accepted the invitation.*]

(4) Nov. 5, 1874. Resolved, "that Mr. Joseph Prestwich, Professor of Geology, and Mr. Frederick York Powell, recently appointed Law Lecturer, be elected Honorary Members of C.R."

3. Privileges of Honorary Members of C.R.

(1) Feb. 24, 1865. Resolved, "that the Curator, with Mr. Prout and Mr. Blore, consider and draw up regulations applying to Honorary Members of C.R."

(2) Nov. 11, 1865. Resolved, "that the following Regulations, as to Honorary Members, drawn up by the Curator with Mr. Prout and Mr. Blore, be adopted:

1. They shall pay neither Entrance-fee nor Subscription.
2. They shall have the privilege of using either Common Room, on all ordinary occasions, on the same footing as Actual Members.
3. They may read the Newspapers, Periodicals, or Books in Common Room, and may write letters there.
4. They may not take Newspapers, Periodicals, or Books out of Common Room.
5. They may make use of the New Common Room for a private party.
6. They may not have wine from the Common Room Cellar, except for use in either Common Room."

(3) June 12, 1884. Resolved, "that all Honorary Members of C.R. be allowed to attend Dessert."

4. Payments to be made by Members of C.R.

(1) Feb. 9, 1864. Resolved, "that Resident Members of C.R. should settle their accounts at the end of each Term."

(2) Feb. 24, 1865. Resolved, "that, looking forward to the time when the Curator shall collect the Subscriptions of Members of C.R., instead of their passing, as at present, through the hands of the Butler, who exacts $13\frac{1}{3}$ per cent, the Curator may inform any one, on his becoming a Member of C.R., that he may either make one payment, according to a fixed scale of Composition, for life, or pay $1/6$ a Quarter, and continue a Member of C.R. so long as he does so, even if he take his name off the Books of the House."

(3) Feb. 13, 1866. Resolved, "that the Steward and the Curator examine the Scale of Subscriptions to C.R., paid by different classes of its Members, with a view to forming a fresh system."

(4) Feb. 26, 1872. Resolved, "that every Member of C.R., who resides for 6 weeks in any Quarter of the year and makes use of the C.R., shall pay $10/6$ a Quarter (or $9/6$, if he shall have compounded)."

(5) do. Resolved, "that henceforward Chaplains, as well as Students, shall pay $10/6$ a Quarter."

(6) Feb. 25, 1873. Resolved, "that, in future, C.R. bills be paid through the Steward; that the items be sent in, weekly, to Residents, as now, and the bills quarterly."

[N.B. The first clause of the above required an order of the G.B., which was made Mar. 8, 1873.]

(7) Mar. 7, 1889. Proposed, “that the Curator be authorised, in the case of any Member withdrawing his name from C.R. (when there is good ground for believing that such Member entered C.R. under the erroneous impression that it was necessary to do so in order to continue a Member of the House, and that, but for that impression, he would never have entered), to refund to such Member his Entrance-fee and the Quarterage he has paid to C.R.” [Rejected by 9 to 7.]

[N.B. The following statement had been circulated, by the Curator, before the Meeting:

“At present, there is given, to every Member of the House taking his M.A. degree, a printed paper (supplied to the Steward by the Curator) containing full information as to cost of containing on the books of the House, of entering Common Room, of containing a Member of it, &c., &c., so that no such erroneous impression can be formed. But, before these papers (introduced by the present Curator) were thus given, such mistakes might easily arise.

Just a year ago, the Curator accidentally learned what the previous system had been, and realised the possibility of there being a considerable number of Members, from whom Common Room is receiving an annual payment made under a false impression.

In consequence of this, he sent round a circular, to about 170 Members paying Quarterage, pointing out that the entrance-fee, and the annual Quarterage, are purely *optional* payments, and begging to be informed whether any false impression, as to their being *necessary* payments, had existed: and whether any one wished to withdraw from Membership.

From the replies which have, as yet, come to hand, it appears that some 14 had entered under false impressions, 8 of whom wished to withdraw from Membership—which of course was at once arranged for. To refund to these 8 Members—who have thus been paying to Common Room (some of them for many years) money they could probably ill afford, under an erroneous impression that it was *necessary*—would cost, roughly speaking, £50. The Curator does not say there is any *legal* claim on Common Room to refund this money: but he feels strongly, that there is a perfectly binding *moral* claim. And he earnestly hopes that Common Room will authorise him to refund it.”

(8) Feb. 20, 1890. Resolved, “that, when a non-resident Member, who is paying 1/. Quarterage, having come to Oxford, wishes to be placed, for the current Quarter, on the list of those who pay 10/6 Quarterage, the Curator be authorised to transfer his name accordingly.”

(9) do. Resolved, “that, when a non-resident Member, who is paying 10/6 Quarterage, wishes to be placed on the list of those who pay 1/. Quarterage, and is willing to resign all the special privileges enjoyed by those who pay the higher Quarterage, the Curator be authorised to transfer his name accordingly.”

5. Meetings, and Polls, of C.R.

(1) Feb. 24, 1887. Resolved, “that Meetings of C.R. shall be held only in Full Term; and that at least 7 days’ notice shall be given.”

(2) do. Resolved, “that, for an Audit-Meeting, 6 Members, with the Curator, shall be a quorum.”

(3) Feb. 20, 1890. Resolved, "that the Curator be authorised to take a Poll, of the Students and Resident Members of C.R., on any question which he deems of sufficient importance, instead of summoning a Special Meeting of the same."

(4) do. Resolved, "that whenever, at a Meeting or on a Poll, the votes are equally divided, the Curator shall have a casting vote."

6. The Curator

(1) Mar. 11, 1886. Resolved, "that the Curator be permitted to spend up to £5 a year in getting clerk's assistance for ledgers."

7. The Servants of C.R.

(1) Feb. 18, 1868. Resolved, "that one of the two C.R. Servants must be in attendance on Week-Days between 8 a. m. and 10 p. m. (except from 3 to 5 p. m.), unless the Curator give them leave of absence."

8. Finance

(1) Feb. 9, 1864. Resolved, "that Mr. Prout and the Curator make enquiries concerning a safe investment for the £300, belonging to C.R., now in Exchequer Bills."

(2) Feb. 13, 1866. Resolved, "that an additional £100 be invested in Exchequer Bills."

(3) Feb. 2, 1867. Resolved, "that £100 be invested in Exchequer Bills."

(4) Feb. 24, 1870. Resolved, "that the Curator and the Steward make enquiries, and, if it seems good to them, invest the C.R. money in a security bringing higher interest than Exchequer Bills."

(5) June 20, 1870. Resolved, "to advance, out of C.R. money now in Exchequer Bills, £200 to the Steward of the Senior Masters' Estate, at 4 p. c., to be paid off in sums of not less than £100 at a time."

[N.B. In Nov., 1870, £100 more was advanced on the same terms.]

(6) Nov. 30, 1882. The Curator read, for the information of Members of C.R., the following statement:—

"In June, 1881, it was proposed in the G.B., (1) that the Curator of C.R. should no longer receive the Guinea paid by every Candidate for the M.A. Degree to the M.A. Table; (2) that this fee should no longer be required by Candidates for the M.A. Degree.

To this the Curator demurred, on behalf of C.R., and obtained thus much:—that the Guinea-fee should be retained as part of the College-fees, and paid over to the Curator by the Steward at the end of each Quarter.

The result of this plan is that the Curator does not see now every Candidate for the M.A. Degree.

Since that date an increasing number of M.A.'s do not become Members of C.R.: and so there will be loss under the heads of Entrance-fees, Annual Subscriptions, and Composition."

(7) Feb. 16, 1888. The Curator having required authority to sell, or buy, Exchequer Bills whenever it should seem desirable to do so, it was resolved "to leave the matter to the discretion of the Curator."

(8) Mar. 7, 1889. "That the Curator be authorised to borrow, up to £300, from any Member of C.R., at 4 p. c. interest, provided the principal be repaid at the end of 2 years."

[N.B. On Feb. 12, 1891, the time of repayment was extended by an addition of 2 years.]

9. Books

(1) Feb. 12, 1861. Resolved, "that Mr. Bayne's offer to undertake the office of C.R. Librarian be accepted."

(2) Feb. 9, 1864. Proposed, "that, when the Second Edition appears of Smith's Dictionary of the Bible, it be bought." [Carried by 9 to 5.]

(3) Feb. 13, 1866. Proposed, "that a Dictionary or Dictionaries of French, German, and English, be bought for C.R." [Carried by 5 to 3.]

(4) Feb. 9, 1869. Resolved, "that enquiry be made of Mudie or Cawthorn for what annual subscription they would supply a certain number (hereafter to be fixed) of new Books, excluding Novels, immediately after publication."

(5) Feb. 28, 1884. Resolved, "that 'Vanity Fair Album' be taken in, in continuation of the set presented by the Curator, which contained the complete series from the commencement in 1869 to 1883 inclusive."

(6) Feb. 24, 1887. Resolved, "that books of reference may not be removed from C.R."

(7) Mar. 7, 1889. Proposed by Mr. Sampson, seconded by Mr. Harcourt, and resolved, *nem. con.*, "that 'Vanity Fair Album' be no longer taken in."

(8) Feb. 20, 1890. The Curator having stated, in answer to a question put by Mr. Harvey, that the Book-Catalogue is incomplete, it was proposed by Mr. Harvey, seconded by Mr. Hassall, and resolved, *nem. con.*, "that the attention of the C.R. Librarian (Mr. Bayne) be drawn to this fact."

(9) Feb. 12, 1891. Proposed by Mr. Powell (seconder not recorded) and carried, *nem. con.*, "that the Resolution (No. 7) of Mar. 7, 1889, be rescinded, and that the series of 'Vanity Fair Album' be completed, by purchasing the volumes for 1889 and 1890, and be continued."

[N.B. The Curator had the greatest difficulty in purchasing the two missing volumes, as they were quite out of print; but he did at last succeed in finding copies.]

10. Periodicals

(1) Feb. 9, 1864. Resolved, "that Quarterly Journals, after they have been in C.R. a fortnight, may be taken out from 6 p. m. to 9 a. m., upon informing the C.R. Servant."

(2) Feb. 2, 1867. Resolved, "that two copies of *The Times* be taken in during Term, and that one of them be marked with the C.R. stamp, and be not taken out of C.R. on any pretence whatever."

(3) Nov. 30, 1875. Resolved, "that Papers, now discontinued at the end of the Term of residence, except the second copy of *The Times*, be taken in during the University Term."

(4) Nov. 30, 1876. Resolved, "that *The Contemporary Review* and *The Fortnightly Review* be sold by Auction at the end of the year."

(5) Feb. 28, 1884. Resolved, “that Periodicals, taken during Term only, be continued into Vacation, at the discretion of the Curator, so long as may seem desirable.”

(6) do. The Curator having stated that he had bound, at his own cost, for giving away, several volumes of old *Illustrated London News*, which would otherwise have been sold as waste paper, it was resolved, “that C.R. pay for the binding of those volumes, and further like volumes, to be given away by the Curator at his discretion.”

(7) do. Resolved, “that Magazines, unless bought by Members of Common Room, may be given away by the Curator at his discretion.”

(8) Feb. 19, 1885. Resolved, “that Periodicals, at present sold as waste paper, may be sent by the Curator to Africa, for the Universities’ Mission, the Weeklies when 3 months old, and the Monthlies when 6.”

(9) May 7, 1889. Resolved, “that, in the preceding Resolution, the last words be altered to ‘the Weeklies when 2 months old, and the Monthlies when 4.’”

(10) do. Resolved, “that, at future Audits, the existing list of Periodicals shall be assumed to go on for the ensuing year, unless Motions, of which previous notice has been given, be made for alterations in it.”

(1) Feb. 12, 1891. The Curator having stated that the two Evening-Papers, delivered by Messrs. Slatter and Rose at about 6 p. m., are the editions published in London at 1.30; but that Messrs. Smith, who have a book-stall at the Railway-Station, would, if they could have orders to supply 6 Papers, all the year round, in the neighbourhood of Ch. Ch., send a special messenger direct to Ch. Ch. on the arrival of the train due here at 8.23, so that Papers, which had been published as late as 5.30, could be supplied by about 8.40, it was proposed, and carried by a majority (8 ‘ayes,’ ‘noes’ not recorded), “that the Curator be authorised to procure the ‘Pall Mall Gazette’ in the manner suggested.”

[N.B. The Curator made arrangements in accordance with the above Resolution: but the result was not satisfactory; the paper never arrived at the specified time; and in March he returned to the old arrangement.]

11. Pictures

(1) Feb. 12, 1861. Resolved, “that Lord Derby, Lord Canning, Sir Cornwall Lewis, Mr. Gladstone, and the Dean of Ch. Ch. be requested to present their portraits (prints) to C.R.” Also “that a portrait of Lord Wellesley be purchased by the Curator.”

(2) Feb. 13, 1866. Resolved, “that the Dean be requested to give his Portrait to the College and to use his influence to obtain a copy of Watts’ Portrait of Mr. Gladstone, and of Weigall’s Portrait of Sir Cornwall Lewis, for the Hall.”

(3) Feb. 24, 1887. The late W. Scoltock had bequeathed to his niece, Miss S. A. Parker, three valuable oil-paintings (“A Portrait of Garrick” by Gainsborough, “A Cattle-Piece” by Cuyp, and “Study of a Female Head” by Frank¹ Hals), for her life-time, and then to become the property of the Dean and Chapter of Ch. Ch., “to be placed in the Common Room of that House, or elsewhere, as the Members of such Common Room for the time being shall from time to time direct.” Miss Parker, however, had surrendered her life-interest in the pictures, and had presented them “to Ch. Ch.,” so that they had now become,

¹should be “Frans”

to all intents and purposes, the property of Common Room. They had been forwarded to the Dean, and by him transmitted to the Curator, who, pending the decision of C.R. as to where they should permanently remain, had hung them, as a temporary arrangement, in the Old Common Room.

Proposed by Mr. Bayne, seconded by Mr. Prout, "that they remain in the Old Common Room." [Carried by 10 to 3.]

Proposed by Mr. Sampson, seconded by Mr. Harcourt, "that they remain in the position they now occupy." [Carried, *nem. con.*]

(4) Mar. 7, 1889. Resolved, "that a 'Catalogue Raisonné' be made of the Prints, Drawings, and Pictures belonging to Common Room."

(5) Feb. 20, 1890. The Curator having stated, in answer to a question put to him by Mr. Harvey, that he had not been able to find time to do any of the work entailed on him by the previous Resolution, it was resolved "that Mr. Harvey be associated with Mr. Bayne for the purpose of drawing up the said Catalogue."

12. Premises of C.R.

(1) May 27, 1868. Proposed, "that it is desirable to add a third room to C.R." [Carried by 7 to 3.]

(2) Feb. 26, 1872. Proposed, "that it is desirable to make a spiral staircase up to Hall from C.R. passage." [Carried by 6 to 2.]

(3) Dec. 5, 1877. Resolved, "to ask the G.B. to assign to the C.R., rent-free, the rooms opposite" (to be used as a Drawing-Room).

[N.B. This was granted by the G.B.]

13. Lighting and ventilation of C.R.

(1) Feb. 12, 1881. Resolved, "that, in order to ventilate the Old Common Room, 4 blocks be used, 2 in the smaller window about $3\frac{1}{2}$ inches deep, and 2 in the larger window about 5 inches deep, so as to raise each sash to that height, and thereby let in fresh air to go up to the ceiling and so create no draught."

[N.B. In thus raising the sashes of the larger window to a greater height than those of the smaller, C.R. seems to have acted on the theory that, the *more* the sashes overlapped each other, the *greater* would be the ventilation; the fact being that, the *more* they overlap, the *larger* is the area of friction, and therefore the *less* the ventilation.]

(2) Feb. 19, 1885. Resolved, "that a Committee be appointed to consider the whole question of lighting and ventilating."

[The Committee was appointed, consisting of Mr. Harcourt, Mr. J. B. Thompson, and Mr. Stewart.]

This Committee provided "Defries" lamps, with opal globes. These being complained of as not giving enough light, the Curator substituted ground-glass globes: and subsequently, as the lamps failed to give satisfaction, Duplex lamps with globes ground above and clear below.

They also provided additional ventilation by means of an oblique opening, *à la Tobin*, pierced through the eastern wall of Common Room, and furnished with a valve inside, which could be opened or shut at pleasure. This appears to give entire satisfaction, so long as it is kept shut.]

14. High Table Dinner when transferred to C.R.

(1) Mar. 7, 1889. Resolved, "that, in Vacations, the High Table Dinner shall be in the *New*, instead of the *Old*, Common Room; and that the Dessert shall also be in the New Common Room."

(2) May 9, 1889. Proposed, "that the old custom, of having High Table Dinner, during Vacations, in the *Old* Common Room, be returned to." [Rejected by 6 to 5, owing to its causing the newspapers to be inaccessible, during dinner, to any one not a Member of the High Table.]

(3) do. Resolved, "that the above proposal be adopted, and the newspapers placed, during Dinner, in another room."

[See Chap. II. § 4.]

15. Dessert in C.R.

(1) Mar. 15, 1878. Resolved, "that the use of the C.R., for Dessert after Hall, shall be reserved for Members of the High Table, Actual and Honorary."

(2) do. Resolved, "that the Chaplains shall, as heretofore, have the right of coming to C.R. for Dessert."

(3) June 12, 1884. Resolved, "that the Resolution of Mar. 15, 1878 [see No. (1)] be abrogated, so as to allow all Actual Members of C.R. to attend Dessert."

(4) do. Resolved, "that the privileges, at present enjoyed by the Chaplains, be extended to the Organist."

(5) do. Resolved, "that all Honorary Members of C.R. be allowed to attend Dessert."

(6) do. Resolved, "that the permission, hitherto accorded to non-resident M.A.'s, not being Members of C.R., who, on coming up for a few days only, are allowed to dine by implied invitation at the High Table, of attending Dessert, be no longer accorded."

(7) Feb. 19, 1885. Proposed, "that any Member bringing friends to Dessert, be permitted to order Wine for himself and them only; such bottles to be marked with his name and not passed round." [It was not seconded.]

(8) do. Proposed, "that the old practice, of allowing any Member, attending Dessert, who gives notice to the C.R. Servant that he takes only one glass of Wine, to be charged accordingly, be revived." [Rejected, *nem. con.*]

(9) Feb. 24, 1887. Proposed, "that, if any Member, attending Dessert, informs the C.R. Servant, that he, or any friend introduced by him, takes one glass of Wine, he shall be charged 9d. only." [Rejected by 6 to 2.]

(10) Feb. 16, 1888. The above proposal was again brought forward. An Amendment was proposed, and carried *nem. con.*, "that the proposed privilege be granted to the present Curator (Mr. Dodgson)."

(11) Mar. 7, 1889. Resolved, "that, in Vacations, the High Table Dinner shall be in the *New*, instead of in the *Old*, Common Room; and that the Dessert shall also be in the New Common Room."

(12) May 9, 1889. Resolved, "that the latter clause of the preceding Resolution be rescinded, and that Dessert always be in the Old Common Room."

(13) Feb. 20, 1890. Proposed, "that any Member of C.R., taking only one glass of Wine at Dessert, and notifying the fact to the C.R. Servant the same

evening, be charged for that one glass only." To this an Amendment was proposed, and carried by 5 to 3, "that the matter be left to the Curator."

16. Afternoon-Tea in C.R.

(1) Feb. 28, 1884. The Curator stated that he had tried, at the request of some Members, the experiment of having tea, cocoa, and bread and butter supplied in C.R. between 4.30 and 5.30 on all week-days. It was resolved "that it be continued."

(2) Mar. 11, 1886. Resolved, "that Afternoon-Tea begin to be supplied on the Friday of Meeting, and be continued till the evening of the last day of Collections."

(3) Feb. 12, 1891. Resolved, "that Afternoon-Tea be supplied till the end of the week after the close of Collections in the Lady Day and Michaelmas Terms, till the end of the second week after the close of Collections in the Midsummer Term, and begin to be supplied, every Term, on the Thursday of the week of Meeting."

17. Dinner-Parties in New C.R.

(1) Mar. 11, 1886. Proposed by Mr. J. B. Thompson, seconded by Mr. Prout, and resolved, *nem. con.*, "that a Committee be appointed to consider means (at an expenditure not exceeding £5) of keeping dishes hot for parties in the New C.R."

[The Committee was appointed, consisting of Mr. J. B. Thompson and Mr. Baynes, the former of whom, as Senior Member of the Committee, undertook, at the request of the Curator, to conduct an informal enquiry, the Curator undertaking to summon a Meeting of the Committee, as soon as there was any proposal ready to be laid before it.]

18. Wine-Cellars

(1) Feb. 13, 1866. The Curator was requested to get an estimate from Mr. Bruton for fitting up with Binns one of the Cellars in No. 5, Meadow Buildings, which the Dean has placed at the disposal of C.R.

(2) Feb. 24, 1870. Resolved, "that two thermometers be placed, one in each Cellar."

(3) June 18, 1886. Resolved, "that the Curator be authorised to construct a new Wine-Cellar, if the Steward should approve, under the New Common Room, at an outlay not exceeding £200."

[N.B. The actual cost was £220 7s. 10d.]

(4) Feb. 16, 1888. Resolved, "that the Curator be authorised to spend a sum not exceeding £60 on having the Cellars ventilated, and the oil-lamps replaced by gas-jets, so as to warm the Cellars in the same way as the Cellar, lately constructed under the New Common Room, is warmed."

[N.B. The actual cost was £43 12s. 7d.]

19. Wines, and the Wine-Committee

(1) Feb. 19, 1863. Resolved, "that the 1842 Port be charged 5/., and not go out of College."

(2) Feb. 9, 1864. Resolved, “that the price of Nierstein be lowered from 6/ to 5/.”

(3) Feb. 24, 1870. Resolved, “that the privilege of taking Wine from the C.R. Cellars be limited to Oxford Residents paying 2 guineas a Quarter, except in the cases of the Chaplains, who may enjoy the same privilege with their Subscription of £1.”

(4) Dec. 3, 1873. Resolved, “that, when any Claret is left in C.R., the remnant be taken next day into Hall, and charged as ordinary Dinner Claret.”

(5) June 2, 1874. Resolved, “that a Committee be appointed to assist the Curator in the choice and purchase of Wines for the use of C.R.”

(6) do. Proposed, “that the number of the Committee be five, of whom the Curator shall be one.” [Carried by 6 to 5.]

(7) do. Resolved, “that the Members of the Committee be elected at the annual C.R. Audit: that the Curator state at the annual Audit the amount proposed to be laid out in Wine during the ensuing year: and that the duties of the Committee shall be as follows:—

(α) to decide upon the *quality* and *kind* of Wine to be bought;

(β) to obtain samples, and to make choice of such Wine and Wine-merchants as may seem good;

(γ) to decide upon the *quality* and *kinds* of Wines which shall be drunk in C.R., and those which may be allowed to go out;

(δ) to superintend generally the C.R. Cellars, and to decide all questions regarding Wines.”

It was further resolved “that no alterations shall be made in the quality of Wines used in College, nor shall any fresh purchases be made, without the consent of the majority of the Committee at a Meeting: that the Committee shall meet at least once a Term: that the Meeting of the Committee shall be called by the Curator: that, at the Meetings, the Curator, or in his absence the senior Member of the Committee present, shall act as Chairman and shall have a casting vote: that no business shall be transacted unless at least three Members of the Committee are present: and that all questions shall be decided by a majority of votes.”

(8) Nov. 30, 1874. Resolved, “that the Rules, adopted on June 2, 1874 [see No. (7)], be abrogated, and that the following be substituted:—

(α) A Committee of five, including the Curator, shall be appointed to assist the Curator in the choice and purchase of Wines.

(β) The Members of the Committee shall be elected at the annual Audit.

(γ) The Committee shall meet, at least once a Term, at a time fixed by the Curator; but that the Curator shall summon a special Meeting at the request of any three Members.

(δ) All questions, as to the quality and kinds of Wines to be bought, shall be decided by a majority of the Committee at a Meeting.”

(9) Nov. 30, 1877. Resolved, “that the Curator ask Messrs. Barret and Clay, whether they will take back 264 Pints of ‘S. Estephe’ Claret, or exchange it for other wine.”

(10) Dec. 8, 1882. Resolved, “that the Rules, adopted on Nov. 30, 1874 [see No. (8)], be abrogated, and that the following be substituted:—

(α) There shall be a Wine-Committee, consisting of five persons, including the Curator, whose duty shall be to assist the Curator in the management of the Cellar.

(β) The Members of the Committee, other than the Curator, shall be elected at the annual Audit.

(γ) A Meeting of the committee shall be held in the second week of each Term, on a day to be fixed by the Curator, who shall give notice of the Meeting in the preceding week. Other Meetings of the Committee may be summoned by the Curator, a week’s notice being given. The Curator shall summon a Meeting of the Committee when requested to do so by three Members thereof.

(δ) All questions relating to the selection, purchase, keeping, serving, and sending out of Wines shall be decided by a majority of the Committee at a Meeting.

(ε) No business shall be transacted unless at least three Members of the Committee shall be present, of whom the Curator shall be one.”

The following additional Rule was proposed, and carried by 14 to 10:—

(ζ) No expenditure of money shall be made by the Committee without the concurrence of the Curator.

(11) Fe. 28, 1884. Resolved, “that the Rules, adopted on Dec. 8, 1882 [see No. (10)], be abrogated, and the following be substituted:—

(α) There shall be a Wine-Committee, consisting of five persons, including the Curator, whose duty shall be to assist the Curator in the management of the Cellar.

(β) The Members of the Committee, other than the Curator, shall be elected at the annual Audit.

(γ) The Curator shall hold a Meeting of the Committee during the first fortnight of each Term, and at any time when requested to do so by three of the Members. He may also hold a Meeting at any other time, if he see reason to do so.

(δ) All questions, which involve an appreciable expenditure of money and which are not mere routine, shall be decided, at a Meeting of the Committee, by a majority of those present and voting; the Curator having a casting-vote when the numbers be equal. In all other details of the management of the Cellar, the Curator shall exercise his own discretion; and no orders shall be given except by the Curator or with his sanction.

(ε) The Curator shall report to the Committee, at each Meeting, all that he has done since the previous Meeting.

(ζ) No business shall be transacted unless the Curator, and two other Members of the Committee be present.”

(12) Mar. 11, 1886. Resolved, “that it be an instruction to the Wine-Committee, that, in sending out Wines, no distinction is to be made among Members paying the same Quarterage.”

(13) May 28, 1886. A Special Meeting of C.R. was held, to consider the Report of the Wine-Committee, who were unanimously of opinion that the distinction, hitherto made between Residents in *College* and Residents in *Oxford* as to taking out Wines, but abrogated on Mar. 11, 1886, was fair in principle. It was proposed “that the Resolution of Mar. 11, be rescinded.” [Proposal rejected by 8 to 4.]

20. Smoking

(1) Mar. 11, 1886. Proposed by Mr. Shute, seconded by Mr. Sampson, and resolved, *nem. con.*, “that a Committee be appointed, to consider means of providing a Smoking-room, every night, by utilising one or other of the ‘tutorial’ rooms, the expense to be borne by C.R., when the room is used by Members after Dessert; but, if it be taken for a private party, the expenses to be borne by the giver of the party.”

[The Committee was appointed, consisting of Mr. Stewart, Mr. Shute, and Mr. Hassall, the first of whom, as Senior Member of the Committee, undertook, at the request of the Curator, to conduct an informal enquiry, the Curator undertaking to summon a Meeting of the Committee, as soon as there was any proposal ready to be laid before it.

Nothing further was done until Feb. 16, 1889, when the following Motion was sent to the Curator, to be placed on the “Agenda” for the Audit-Meeting of Mar. 7, 1889:—“that an Executive Committee be appointed to provide arrangements for persons desirous to smoke.” This was signed by Mr. Stewart, Mr. Onions, Mr. Hassall, and Mr. Skene. The Curator intimated, in reply, that a Committee, appointed to consider this matter, had been in existence for nearly 3 years, and that 2 of the proposers of this Motion were Members of it. This led to a Meeting of the Committee, who drew up a report.]

(2) Mar. 7, 1889. Proposed by Mr. Harvey, seconded by Mr. J. B. Thompson, “that smoking be permitted in the Old Common Room after 9 p. m. on week-days.” [Rejected by 15 to 2.]

(3) do. The Report of the above-named Committee was considered, and it was resolved “that the Drawing-Room be ready for smoking every evening during Term, and (with notice) in Vacation, unless required for a private party.”

(4) May 9, 1889. Resolved, “that an Executive Committee be appointed for the purpose of lighting the Smoking-Room.”

(5) do. Proposed, “that, in Resolution 2, the words ‘with notice’ apply to Term as well as to Vacation.” [Rejected, *nem. con.*]

(6) do. Proposed, “that the Curator be authorised to place an asbestos-fire in the Smoking-Room.” [Carried by 6 to 4.]

(7) May 17, 1889. The Curator, having asked permission, at the Meeting of May 9, to give to the C.R. Servants what he considered to be reasonable remuneration for the additional trouble entailed on them by the new Smoking-Room, and having been refused that permission, summoned this Meeting to receive his resignation. It was thereupon resolved, *nem. con.*, to leave the whole matter in his hands. The Curator did not tender his resignation.

(8) Mar. 4, 1892. The Curator having stated that, when smoking takes place in the New Common Room (as sometimes occurs when a dinner-party is given there), the effect is to render the set of rooms, immediately over it, almost uninhabitable, it was proposed by him, and seconded by Mr. Prout, "that it be henceforward a rule of C.R., that smoking is not permitted on the premises, except in the room that has been specially provided for the purpose." This was objected to, and the Motion, altered to the following form, was carried *nem. con.*:—"that a builder be consulted, and an attempt made to remedy the structural defects, which at present allow the smoke to penetrate the rooms over the New Common Room; that, in case of this attempt failing, it be henceforward a rule of C.R., that smoking is not permitted in any of its rooms, except in the one specially provided for the purpose; and that, meanwhile, it be understood that smoking is not permitted in the New Common Room."

[N.B. It was of course understood, though not formally stated, that, in case of this attempt succeeding, smoking should henceforward be permitted in the New Common Room.]

21. Miscellaneous

(1) After the "Gaudy" of Nov. 1, 1862, the Senior and Junior M.A. Tables were transferred to the North and South ends of the Dais.

(2) Nov. 8, 1862. Proposed, "that it is expedient that the Senior and Junior M.A. Tables should be united as soon as possible." [Carried by 6 to 5.]

(3) Nov. 7, 1864. Letter from the Dean to the Curator of C.R., concerning the opening of Canterbury Gate. "Dear Mr. Bayne, In answer to the Memorial which (as Curator of C.R.) you sent me last Term, I beg leave to inform you that I have ordered the Porter at Canterbury Gate to open the Gate for M.A.'s resident within walls between the hours of 7 a. m. and 11 p. m. Will you be so good as to furnish to the Porter a list of such resident M.A.'s, signed with your name, and make a note that a fresh list should be given by the Curator of the C.R. at the beginning of every Term. Yours very truly, Henry G. Liddell."

[N.B. This privilege was afterwards extended to all Senior Students resident within the walls.]

(4) Feb. 13, 1866. Resolved, "that the Curator with the Steward and Mr. Sandford form a Committee to see whether arrangements could be made for supplying the Undergraduates with Coffee and Toast from the C.R."

Chapter II. C.R. Finance, &c.

1. Curators of C.R.

The following are the names of the last nine Curators, with the dates of appointment.

- Cox, Rev. C. H.
1826. Shuldham, Rev. J.
 1845. Hill, Rev. E.
 1850. Rogers, Rev. J. P.
 1851. Marshall, Rev. G.
 1857. Joyce, Rev. F. H.
 1862. Bayne, Rev. T. V.
 1882. Dodgson, Rev. C. L.
 1892. Strong, Rev. T. B.

2. Ancient and Modern Finance

The following Summaries, of C.R. Receipts and Expenditure for the years 1818 and 1891, are here given for comparison:² but, as to the amounts of Wine bought, a fairer comparison may be made by taking averages of periods of (say) 5 years: this gives, for 1818, £268, and, for 1891, £588. Thus, while the amount consumed has only increased by one-half, the amount bought has more than doubled. The explanation is to be found, I believe, in the fact that we now have a much larger stock in hand than we used to have. The stock, in 1802, had cost about £1020; in 1886 it had cost about £4300.

The item "wine consumed," in the Receipts for 1818 and 1891, needs explanation. The ancient system was to keep a "Wine and Tea Account" in a separate Ledger—the "Expenditure," for wine, being of course the sum total of the wine-bills paid during the year, and the "Receipts," for wine, being the value assigned to the wine recorded as having left the cellar. This latter sum was credited to C.R. by the Curator; and *if* all this wine was duly entered in Member's Bills, it was duly paid to the Curator by the Steward, as part of the sum total of those Bills; otherwise, the loss apparently fell on the unfortunate Curator. This system was abandoned about 20 years ago, and since then the practice has been to credit C.R., not with the assigned value of the wine taken out, but simply with the money received on account of Members' Bills; so that, if any of the wine taken out fails to be duly entered in those Bills, the loss falls on C.R., and *not*, as was previously the case, on the Curator.

Previously to 1882, no means existed, that I can discover, for ascertaining whether these entries had or had not been properly made; and one of the tasks I set myself, on taking the Curatorship, was to construct Ledgers which should furnish such means.

The Curator is now able, at the conclusion of a year, to ascertain the totals of the values, assigned by C.R. to the wines that have been taken out of the cellar, under the three headings of "Common Room," "Hall," and "Rooms"; and also the totals of the sums, charged in Members' Bills, under the same three headings; as well as the total "loss" incurred, by sending into Hall the remnants of Claret opened for Dessert in Common Room, and charging it as Dinner-Wine.

²Remark: These are not reproduced here.

3. Ancient method of dealing with Wine-Merchants

The Table³ furnishes some curious information as to the contented spirit in which C.R., at the beginning of this century, went on, from year to year, ordering more wines, though already heavily in debt to the Wine-Merchant—debt which in some cases remained unpaid for several years together, and must have entailed on the Merchant (unless interest was paid on it) a considerable annual loss. Thus, it appears that, during the whole period 1803 to 1807, C.R. owed “Hugh Powell” about £700. The acme of recklessness seems to have been reached in 1805, when, though owing “Hugh Powell” £667, and having only £261 cash at their command, C.R. actually ordered £531 worth of wine, and began the new year £937 in debt!

4. The High Table

For the convenience of readers, the following Regulations as to the High Table, adopted by the G.B. on May 4th, 1892, are here reprinted. At a subsequent Meeting of the G.B., it was agreed that Rule 4 should also apply to all who, in accordance with Rule 5, should “dine at the High Table by implied invitation.”

1. Members of the Governing Body alone are by right Members of the High Table.

2. All Students on the Old Foundation, and all Non-Official Students who are not Members of the Governing Body, are Honorary Members of the High Table.

3. All former Canons, Students and Senior Students whose names are on the Book of the House, together with all Honorary Students, are Honorary Members of the High Table.

4. Any Member of the High Table may introduce a guest, and as a general rule not more than one guest on any one day.

5. All Members of the House who have taken the degree of M.A., or any equivalent or superior degree, and have not been invited to become Honorary Members of the High Table by a resolution of the Governing Body, may dine at the High Table by implied invitation for three days in each Term; and also, if they be Members of the Common Room, for three days only in each Vacation.

6. The Caterer, or in his absence the Senior Canon or Student present, shall take the Chair on week-days at 7 p. m. and on Sundays at 6.15 p. m. by the Cathedral clock.

7. If any Member of the High Table, having given in his name for dinner, do not dine, a charge of 2/6 shall be made in his battels, unless he have sent notice to the kitchen before 3 p. m.

8. The list of those who intend to dine shall be made up at 2 p. m., and all names should be given in before that time.

9. The cost of dinner shall not as a rule exceed the amount of the statutory dinner allowance: if on any occasion it does so, the excess shall be divided among all Members of the High Table dining on that day. But this rule shall be applied only if the total outlay for a Term or for a Vacation exceed the aggregate of the allowances and the charges for the same period.

³Remark: The original has some reference; the table itself with the money due to wine-merchants from 1796 to 1820 is not reproduced here.

12.29 Resident Women-Students

Source: printed 1896

In the bewildering multiplicity of petty side-issues, with which the question, of granting University Degrees to Women, has been overlaid, there is some danger that Members of Congregation may lose sight of the really important issues involved.

The following four propositions should, I think, be kept steadily in view by all who wish to form an independent opinion as to the matter in dispute.

(1)

One of the chief functions, if not *the* chief function, of our University, is to prepare young Men—partly by teaching, partly by discipline, partly by the personal influence of those who have charge of them, and partly by the influence they exercise on one another—for the business of Life.

[This needs to be *specially* borne in mind in connection with the assumption, so constantly made in this controversy, that the *sole* meaning of the B.A. Degree is that it guarantees the possession of a large amount of *knowledge*.]

Consequently,

(2)

The first question to be asked, as to any Scheme proposed to our University, is, “How will it affect those for whose well-being we are responsible?” When we have assured ourselves that it will not exercise any harmful influence on our own Students, then, and not till then, may we fairly proceed to consider how it will affect those for whose well-being we are *not* responsible.

(3)

Any Scheme for the recognition of Women-Students—whether by a series of Certificates or a single Diploma—whereby those who have resided here will have an advantage, in the keen competition for educational posts, over those who have not, will most certainly end in making residence *compulsory* on all. Whether they wish it or not, whether they can afford it or not, Women-Students will find that they *must* reside, unless they are content to be hopelessly distanced in the race whose prize is “daily bread.”

Consequently,

(4)

Any such Scheme is certain to produce an enormous influx of resident Women-Students. Considering that we have over 3000 young Men-Students, and that the number of young Women, who are devoting themselves to study, is increasing “by leaps and bounds,” it may be confidently predicted that any such Scheme will bring to Oxford at least 3000 more young Women-Students. Such an immigration will of course produce a rapid increase in the size of Oxford, and

will necessitate a large increase in our teaching-staff and in the number of our lecture-rooms.

The main question before us is, "Will the mutual influence, of two such sets of Students, residing in such close proximity, be for good or for evil?"

Some Members of the Congregation will reply, "For good," some, "For evil." By all means let each form his own independent judgement, and give effect to it by his vote: but let him do it *deliberately*, and in the full light of *facts*.

The late Dr. Liddon was strongly of opinion that such an influence would be for *evil*, at any rate for the young *Women*. I have myself heard him—no doubt many others have done the same—express, most warmly and earnestly, his fears as to the effect the new movement, for flooding Oxford with young Women-Students, would have on the young Women themselves. And I have no doubt that, were he yet among us, his silvery tones would have been heard in Congregation last Tuesday, deprecating the introduction, into our ancient University, of that social monster, the "He-Woman".

Surely the real "way out", from our present perplexity, is to be found in some such course as that advocated by Mr. Strachan-Davidson, that Oxford, Cambridge, and Dublin, should join in a petition to the Crown to grant a charter for a Women's University.

Such a University would very soon attract to itself the greater portion of young Women-Students. It takes no great time to build Colleges; and we might confidently expect to see "New Oxford," in the course of 20 or even of 10 years, rivaling Oxford, not only in numbers, but in attainments. At first, perhaps, they might need to borrow some teachers from the older Universities; but they would soon be able to supply all, that would be needed, from among themselves; and Women-Lecturers and Women-Professors would arise, fully as good as any that the older Universities have ever produced.

This proposal has been met by the plea that it is *not* what the Women themselves "desire." Surely no weaker plea was ever urged in any controversy. Even *men* very often fail to "desire" what is, after all, the best thing for them to *have*. And those ancients, on whom the onerous task was laid, of weighing and, if reasonably possible, satisfying the claims of the horse-leech and her two daughters, had other things to consider than the mere shrillness of their outcries.

Charles L. Dodgson.

13.1 Vivisection as a Sign of the Times

Source: Pall Mall Gazette, February 12, 1875

To the EDITOR of the PALL MALL GAZETTE

SIR,—The letter which appeared in last week's *Spectator*, and which must have saddened the heart of every one who read it, seems to suggest a question which has not yet been asked or answered with sufficient clearness; and that is, how far may vivisection be regarded as a sign of the times, and a fair specimen of that higher civilization which a purely secular State education is to give us? In that much-vaunted panacea for all human ills we are promised, not only increase of knowledge, but also a higher moral character; any momentary doubt on this point which we may feel is set at rest at once by quoting the great crucial instance of Germany. The syllogism, if it deserves the name, is usually stated thus: Germany has a higher scientific education than England; Germany has a lower average of crime than England; *ergo*, a scientific education tends to improve moral conduct. Some old-fashioned logician might perhaps whisper to himself, "Præmissis particularibus nihil probatur," but such a remark, now that Aldrich is out of date, would only excite a pitying smile. May we, then, regard the practice of vivisection as a legitimate fruit, or as an abnormal development, of this higher moral character? Is the anatomist, who can contemplate unmoved the agonies he is inflicting, for no higher purpose than to gratify a scientific curiosity, or to illustrate some well-established truth, a being higher or lower, in the scale of humanity, than the ignorant boor whose very soul would sicken at the horrid sight? For if ever there was an argument in favour of purely scientific education more cogent than another, it is surely this (a few years back it might have been put into the mouth of any advocate of science; now it reads like the merest mockery): "What can teach the noble quality of mercy, of sensitiveness to all forms of suffering, so powerfully as the knowledge of what suffering really is? Can the man who has once realized by minute study what the nerves are,

Quoted from *Artis
Logicae Compendium*
by Henry Aldrich

what the brain is, and what waves of agony the one can convey to the other, go forth and wantonly inflict pain on any sentient being?" A little while ago we should have confidently replied, "He cannot do it;" in the light of modern revelations we must sorrowfully confess "He can." And let it never be said that this is done with serious forethought of the balance of pain and gain; that the operator has pleaded with himself "Pain is indeed an evil, but so much suffering may fitly be endured to purchase so much knowledge." When I hear of one of these ardent searchers after truth giving—not a helpless dumb animal, to whom he says in effect, "*You shall suffer that I may know.*"—but his own person to the probe and to the scalpel, I will believe in him as recognizing a principle of justice, and I will honour him as acting up to his principles. "But the thing cannot be!" cries some amiable reader fresh from an interview with that most charming of men, a London physician. "What! Is it possible that one so gentle in manner, so full of noble sentiments, can be hardhearted? The very idea is an outrage to common sense!" And thus we are duped every day of our lives. Is it possible that that bank director, with his broad honest face, can be meditating a fraud? That the chairman of that meeting of shareholders, whose every tone has the ring of truth in it, can hold in his hand a "cooked" schedule of accounts? That my wine merchant, so outspoken, so confiding, can be supplying me with an adulterated article? That the schoolmaster, to whom I have entrusted my little boy, can starve or neglect him? How well I remember his words to the dear child when last we parted. "You are leaving your friends," he said, "but you will have a father in me, my dear, and a mother in Mrs. Squeers!" For all such rose-coloured dreams of the necessary immunity from human vices of educated men, the facts in last week's *Spectator* have a terrible significance. "Trust no man further than you can see him," they seem to say. "Qui vult decipi, decipiatur."

Quoted from
Nicholas Nickleby by
Charles Dickens

Allow me to quote from a modern writer a few sentences bearing on this subject:—

We are at present, legislature and nation together, eagerly pushing forward schemes which proceed on the postulate that conduct is determined, not by feelings, but by cognitions. For what else is the assumption underlying this anxious urging-on of organizations for teaching? What is the root-notion common to Secularists and Denominationalists but the notion that spread of knowledge is the one thing needful for bettering behaviour? Having both swallowed certain statistical fallacies, there has grown up in them the belief that State education will check ill-doing. . . . This belief in the moralizing effects of intellectual culture, flatly contradicted by facts, is absurd *à priori*. . . . This faith in lesson-books and readings is one of the superstitions of the age. . . . Not by precept, though heard daily; not by example, unless it is followed: but only by action, often caused by the related feeling, can a moral habit be formed. And yet this truth, which mental science clearly teaches, and which is in harmony with familiar sayings, is a truth wholly ignored in current educational fanaticisms.

There need no praises of mine to commend to the consideration of all thoughtful readers these words of Herbert Spencer. They are to be found in "The Study of Sociology," pp. 361–367.

Let us, however, do justice to science. It is not so wholly wanting as Mr. Herbert Spencer would have us believe in principles of action—principles by which we may regulate our conduct in life. I myself once heard an accomplished man of science declare that his labours had taught him one special personal lesson which, above all others, he had laid to heart. A minute study of the nervous system and of the various forms of pain produced by wounds had inspired in

him one profound resolution; and that was—what think you? Never, under any circumstances, to adventure his own person into the field of battle! I have somewhere read in a book—a rather antiquated book, I fear, and one much discredited by modern lights—the words “the whole creation groaneth and travaileth in pain together until now.” Truly we read these words with a new meaning in the present day! “Groan and travail” it undoubtedly does still (more than ever, so far as the brute creation is concerned); but to what end? Some higher and more glorious state? So one might have said a few years back. Not so in these days. The τέλος τέλειον of secular education, when divorced from religious or moral training, is, I say it deliberately, the purest and most unmitigated selfishness. The world has seen and tired of the worship of Nature, of Reason, of Humanity; for this nineteenth century has been reserved the development of the most refined religion of all—the worship of Self. For that, indeed, is the upshot of it all. The enslavement of his weaker brethren—“the labour of those who do not enjoy, for the enjoyment of those who do not labour”—the degradation of woman—the torture of the animal world—these are the steps of the ladder by which man is ascending to his higher civilization. Selfishness is the key-note of all purely secular education; and I take vivisection to be a glaring, a wholly unmistakable, case in point. And let it not be thought that this is an evil that we can hope to see produce the good for which we are asked to tolerate it, and then pass away. It is one that tends continually to spread. And if it be tolerated or even ignored now, the age of universal education, when the sciences, and anatomy among them, shall be the heritage of all, will be heralded by a cry of anguish from the brute creation that will ring through the length and breadth of the land! This, then, is the glorious future to which the advocate of secular education may look forwards: the dawn that gilds the horizon of his hopes! An age when all forms of religious thought shall be things of the past; when chemistry and biology shall be the A B C of a State education enforced on all; when vivisection shall be practised in every college and school; and when the man of science, looking forth over a world which will then own no other sway than his, shall exult in the thought that he has made of this fair green earth, if not a heaven for man, at least a hell for animals.—I am, Sir, your obedient servant,

13.2 Vivisection

Source: Pall Mall Gazette, February 16, 1875

To the EDITOR of the PALL MALL GAZETTE

SIR,—I have no desire to trouble you with a correspondence, but will you kindly allow me room to suggest to your correspondent “Y.” that he is (to use a sporting phrase) “running the wrong fox?” The position *I* had taken was (to put it into technical form) “not all men of anatomical science are merciful;” the position *he* is assailing is “all men of anatomical science are unmerciful.” The fact that army surgeons (a race whom I honour from my heart) are often noble and self-sacrificing tells well for the argument *he* is maintaining; but, so far as concerns the question really at issue, it is irrelevant.—I am, Sir, your obedient servant,

Lewis Carroll

13.3 Some Popular Fallacies about Vivisection

Source: The Fortnightly Review, June 1, 1875

At a time when this painful subject is engrossing so large a share of public attention, no apology, I trust, is needed for the following attempt to formulate and classify some of the many fallacies, as they seem to me, which I have met with in the writings of those who advocate the practice. No greater service can be rendered to the cause of truth, in this fiercely contested field, than to reduce these shadowy, impalpable phantoms into definite forms, which can be seen, which can be grappled with, and which, when once fairly *laid*, we shall not need to exorcise a second time.

I begin with two contradictory propositions, which seem to constitute the two extremes, containing between them the golden mean of truth:—

1. *That the infliction of pain on animals is a right of man, needing no justification.*

2. *That it is in no case justifiable.*

The first of these is assumed in practice by many who would hardly venture to outrage the common feelings of humanity by stating it in terms. All who recognise the difference of right and wrong must admit, if the question be closely pressed, that the infliction of pain is in *some* cases wrong. Those who deny it are not likely to be amenable to argument. For what common ground have we? They must be restrained, like brute beasts, by physical force.

The second has been assumed by an Association lately formed for the total suppression of Vivisection, in whose manifesto it is placed in the same category with Slavery, as being an absolute evil, with which no terms can be made. I think I may assume that the proposition most generally accepted is an intermediate one, namely, that the infliction of pain is in some cases justifiable, but not in all.

3. *That our right to inflict pain on animals is coextensive with our right to kill, or even to exterminate a race (which prevents the existence of possible animals), all being alike infringements of their rights.*

This is one of the commonest and most misleading of all the fallacies. Mr. Freeman, in an article on Field Sports and Vivisection, which appeared in the *Fortnightly Review* for May, 1874, appears to countenance this when he classes death and pain together, as if they were admitted to be homogeneous. For example—

“By cruelty then I understand, as I have understood throughout, not all infliction of death or suffering on man or beast, but their wrongful or needless infliction. . . . My positions then were two. First . . . that certain cases of the infliction of death or suffering on brute creatures may be blameworthy. The second was, that all infliction of death or suffering for the purpose of mere sport is one of those blameworthy cases.”

But in justice to Mr. Freeman I ought also to quote the following sentence, in which he takes the opposite view: “I must in all cases draw a wide distinction between mere killing and torture.”

In discussing “the rights of animals,” I think I may pass by, as needing no remark, the so-called right of a race of animals to be perpetuated, and the still more shadowy right of a non-existent animal to come into existence. The only question worth consideration is whether the killing of an animal is a real infringement of right. Once grant this, and a *reductio ad absurdum* is imminent,

unless we are illogical enough to assign rights to animals in proportion to their size. Never may we destroy, for our convenience, some of a litter of puppies—or open a score of oysters when nineteen would have sufficed—or light a candle in a summer evening for mere pleasure, lest some hapless moth should rush to an untimely end! Nay, we must not even take a walk, with the certainty of crushing many an insect in our path, unless for really important business! Surely all this is childish. In the absolute hopelessness of drawing a line anywhere, I conclude (and I believe that many, on considering the point, will agree with me) that man has an *absolute* right to inflict death on animals, without assigning any reason, provided that it be a painless death, but that any infliction of pain needs its special justification.

4. *That man is infinitely more important than the lower animals, so that the infliction of animal suffering, however great, is justifiable if it prevent human suffering, however small.*

This fallacy can be assumed only when unexpressed. To put it into words is almost to refute it. Few, even in an age where selfishness has almost become a religion, dare openly avow a selfishness so hideous as this! While there are thousands, I believe, who would be ready to assure the vivisectors that, so far as their personal interests are concerned, they are ready to forego any prospect they may have of a diminution of pain, if it can only be secured by the infliction of so much pain on innocent creatures.

But I have a more serious charge than that of selfishness to bring against the scientific men who make this assumption. They use it dishonestly, recognising it when it tells in their favour, and ignoring it when it tells against them. For does it not presuppose the axiom that human and animal suffering differ *in kind*? A strange assertion this, from the lips of people who tell us that man is twin-brother to the monkey! Let them be at least consistent, and when they have proved that the lessening of *human* suffering is an end so great and glorious as to justify any means that will secure it, let them give the anthropomorphoid ape the benefit of the argument. Further than that I will not ask them to go, but will resign them in confidence to the guidance of an inexorable logic.

Had they only the candour and the courage to do it, I believe that they would choose the other horn of the dilemma, and would reply, "Yes, man *is* in the same category as the brute; and just as we care not (you see it, so we cannot deny it) how much pain we inflict on the one, so we care not, unless when deterred by legal penalties, how much we inflict on the other. The lust for scientific knowledge is our real guiding principle. The lessening of human suffering is a mere dummy set up to amuse sentimental dreamers."

I come now to another class of fallacies—those involved in the comparison, so often made, between vivisection and field-sports. If the theory, that the two are essentially similar, involved no worse consequence than that sport should be condemned by all who condemn vivisection, I should be by no means anxious to refute it. Unfortunately the other consequence is just as logical, and just as likely, that vivisection should be approved of by all who approve of sport.

The comparison rests on the assumption that the main evil laid to the charge of vivisection is the pain inflicted on the animal. This assumption I propose to deal with, further on, as a fallacy: at present I will admit it for the sake of argument, hoping to show that, even on this hypothesis, the vivisectors have a very poor case. In making this comparison their first claim is—

5. *That it is fair to compare aggregates of pain.*

“The aggregate amount of wrong”—I quote from an article in the *Pall Mall Gazette* for February 13—“which is perpetrated against animals by sportsmen in a single year probably exceeds that which some of them endure from vivisection in half a century.” The best refutation of this fallacy would seem to be to trace it to its logical conclusion—that a very large number of trivial wrongs are equal to one great one. For instance, that a man, who by selling adulterated bread inflicts a minute injury on the health of some thousands of persons, commits a crime equal to one murder. Once grasp this *reductio ad absurdum*, and you will be ready to allow that the only fair comparison is between individual and individual.

Supposing the vivisectionists forced to abandon this position, they may then fall back on the next parallel—

6. *That the pain inflicted on an individual animal in vivisection is not greater than in sport.*

I am no sportsman, and so have no right to dogmatize, but I am tolerably sure that all sportsmen will agree with me that this is untrue of shooting, in which, whenever the creature is killed at once, it is probably as painless a form of death as could be devised; while the sufferings of one that escapes wounded ought to be laid to the charge of unskilful sport, not of sport in the abstract. Probably much the same might be said of fishing; for other forms of sport, and especially for hunting, I have no defence to offer, believing that they involve very great cruelty.

Even if the last two fallacies were granted to the advocates of vivisection, their use in the argument must depend on the following proposition being true:—

7. *That the evil charged against vivisection consists chiefly in the pain inflicted on the animal.*

I maintain, on the contrary, that it consists chiefly in the effect produced on the operator. To use the words of Mr. Freeman, in the article already quoted, “the question is not as to the aggregate amount of suffering inflicted, but as to the moral character of the acts by which the suffering is inflicted.” We see this most clearly, when we shift our view from the act itself to its remoter consequences. The hapless animal suffers, dies, “and there an end:” but the man whose sympathies have been deadened, and whose selfishness has been fostered, by the contemplation of pain deliberately inflicted, may be the parent of others equally brutalised, and so bequeath a curse to future ages. And even if we limit our view to the present time, who can doubt that the degradation of a soul is a greater evil than the suffering of a bodily frame? Even if driven to admit this, the advocates of the practice may still assert—

8. *That vivisection has no demoralising effect on the character of the operator.*

“Look at our surgeons!” they may exclaim. “Are they a demoralised or a brutalised class? Yet you must admit that, in the operations they have to perform, they are perpetually contemplating pain—aye, and pain deliberately inflicted by their own hands.” The analogy is not a fair one; since the *immediate* motive—of saving the life, or diminishing the sufferings, of the person operated on—is a counteracting influence in surgery, to which vivisection, with its shadowy hope of some day relieving the sufferings of some human being yet unborn, has nothing parallel to offer. This, however, is a question to be decided by evidence, not by argument. History furnishes us with but too many examples of the degrada-

Quoted from *Macbeth*
by William
Shakespeare

tion of character produced by the deliberate pitiless contemplation of suffering. The effect of the national bull-fights on the Spanish character is a case in point. But we need not go to Spain for evidence: the following extract from the *Echo*, quoted in the *Spectator* for March 20, will be enough to enable the reader to judge for himself what sort of effect this practice is likely to have on the minds of students:—

“But if yet more be necessary to satisfy the public mind on this latter point” (the effect on the operators), “the testimony of an English physiologist, known to the writer, may be useful in conclusion. He was present some time past at a lecture, in the course of which demonstrations were made on living dogs. When the unfortunate creatures cried and moaned under the operations, many of the students *actually mimicked their cries in derision!* The gentleman who related this occurrence adds that the spectacle of the writhing animals and the fiendish behaviour of the audience so sickened him, that he could not wait for the conclusion of the lecture, but took his departure in disgust.”

It is a humiliating but an undeniable truth, that man has something of the wild beast in him, that a thirst for blood can be aroused in him by witnessing a scene of carnage, and that the infliction of torture, when the first instincts of horror have been deadened by familiarity, may become, first, a matter of indifference, then a subject of morbid interest, then a positive pleasure, then a ghastly and ferocious delight.

Here again, however, the analogy of sport is of some service to the vivisectionist, and he may plead that the influence we dread is already at work among our sportsmen. This I will now consider.

9. *That vivisection does not demoralise the character more than sport.*

The opponents' case would not, I think, suffer much even if this were admitted; but I am inclined to demur to it as a universal truth. We must remember that much of the excitement and interest of sport depend on causes entirely unconnected with the infliction of pain, which is rather ignored than deliberately contemplated; whereas in vivisection the painful effects constitute in many cases a part, in some cases the whole, of the interest felt by the spectator. And all they tell us of the highly developed intellect of the anatomical student, with which they contrast so contemptuously the low animal instincts of the foxhunter, is but another argument against themselves; for surely the nobler the being we degrade, the greater is the injury we inflict on society. *Corruptio optimi pessima.*

“But all this ignores the *motive* of the action,” cry the vivisectionists. “What is it in sport? Mere pleasure. In this matter we hold an impregnable position.” Let us see.

10. *That, while the motive in sport is essentially selfish, in vivisection it is essentially unselfish.*

It is my conviction that the non-scientific world is far too ready to attribute to the advocates of science all the virtues they are so ready to claim; and when they put forward their favourite *ad captandum* argument that their labours are undergone for one pure motive—the good of humanity—society is far too ready to exclaim, with Mrs. Varden, “Here is a meek, righteous, thorough-going Christian, who, having dropped a pinch of salt on the tails of all the cardinal virtues, and caught them every one, makes light of their possession, and pants for more morality!” In other words, society is far too ready to accept the picture of the pale, worn devotee of science giving his days and nights to irksome and thankless toil, spurred on by no other motive than a boundless philanthropy. As

Quoted from
Barnaby Rudge by
Charles Dickens

one who has himself devoted much time and labour to scientific investigations, I desire to offer the strongest possible protest against this falsely coloured picture. I believe that any branch of science, when taken up by one who has a natural turn for it, will soon become as fascinating as sport to the most ardent sportsman, or as any form of pleasure to the most refined sensualist. The claim that hard work, or the endurance of privation, proves the existence of an unselfish motive, is simply monstrous. Grant to me that the miser is proved unselfish when he stints himself of food and sleep to add one more piece of gold to his secret hoard, that the place-hunter is proved unselfish when he toils through long years to reach the goal of his ambition, and I will grant to you that the laborious pursuit of science is proof positive of an unselfish motive. Of course I do not assert, of even a single scientific student, that his real motive is merely that craving for more knowledge, whether useful or useless, which is as natural an appetite as the craving for novelty or any other form of excitement. I only say that the lower motive would account for the observed conduct quite as well as the higher.

Yet, after all, the whole argument, deduced from a comparison of vivisection with sport, rests on the following proposition, which I claim to class as a fallacy:—

11. *That the toleration of one form of an evil necessitates the toleration of all others.*

Grant this, and you simply paralyze all conceivable efforts at reformation. How can we talk of putting down cruelty to animals when drunkenness is rampant in the land? You would propose, then, to legislate in the interests of sobriety? Shame on you! Look at the unseaworthy ships in which our gallant sailors are risking their lives! What! Organize a crusade against dishonest shipowners, while our streets swarm with a population growing up in heathen ignorance! We can but reply, *non omnia possumus omnes*. And surely the man who sees his way to diminish in any degree even a single one of the myriad evils around him, may well lay to heart the saying of a wise man of old, "Whatsoever thy hand findeth to do, do it with thy might."

Quoted from
Ecclesiastes 9:10

The last parallel to which the advocates of vivisection may be expected to retreat, supposing all these positions to be found untenable, is the assertion—

12. *That legislation would only increase the evil.*

The plea, if I understand it aright, amounts to this,—that legislation would probably encourage many to go beyond the limit with which at present they are content, as soon as they found that a legal limit had been fixed beyond their own. Granting this to be the tendency of human nature, what is the remedy usually adopted in other cases? A stricter limit, or the abandonment of all limits? Suppose a case—that in a certain town it were proposed to close all taverns at midnight, and that the opponents of the measure urged, "At present some close at eleven—a most desirable hour: if you pass this law, all will keep open till midnight." What would the answer be? "Then let us do nothing," or "Then let us fix eleven, instead of twelve, as our limit"? Surely this does not need many words: the principle of doing evil that good may come is not likely to find many defenders, even in this modern disguise of forbearing to do good lest evil should come. We may safely take our stand on the principle of doing the duty which we see before us: secondary consequences are at once out of our control and beyond our calculation.

Let me now collect into one paragraph the contradictions of some of these fallacies (which I have here rather attempted to formulate and classify than to

refute, or even fully discuss), and so exhibit in one view the case of the opponents of vivisection. It is briefly this—

That while we do not deny the absolute right of man to end the lives of the lower animals by a painless death, we require good and sufficient cause to be shown for all infliction of pain.

That the prevention of suffering to a human being does not justify the infliction of a greater amount of suffering on an animal.

That the chief evil of the practice of vivisection consists in its effect on the moral character of the operator; and that this effect is distinctly demoralising and brutalising.

That hard work and the endurance of privations are no proof of an unselfish motive.

That the toleration of one form of an evil is no excuse for tolerating another.

Lastly, that the risk of legislation increasing the evil is not enough to make all legislation undesirable.

We have now, I think, seen good reason to suspect that the principle of selfishness lies at the root of this accursed practice. That the same principle is probably the cause of the indifference with which its growth among us is regarded, is not perhaps so obvious. Yet I believe this indifference to be based on a tacit assumption, which I propose to notice as the last of this long catalogue of fallacies—

13. *That the practice of vivisection will never be extended so as to include human subjects.*

That is, in other words, that while science arrogates to herself the right of torturing at her pleasure the whole sentient creation up to man himself, some inscrutable boundary-line is there drawn, over which she will never venture to pass. "Let the galled jade wince, *our* withers are unwrung."

Not improbably, when that stately Levite of old was pacing with dainty step the road that led from Jerusalem to Jericho, "bemused with thinking of tithe-concerns," and doing his best to look unconscious of the prostrate form on the other side of the way, if it could have been whispered in his ear, "*Your* turn comes next to fall among the thieves!" some sudden thrill of pity might have been aroused in him: he might even, at the risk of soiling those rich robes, have joined the Samaritan in his humane task of tending the wounded man. And surely the easy-going Levites of our own time would take an altogether new interest in this matter, could they only realise the possible advent of a day when anatomy shall claim, as legitimate subjects for experiment, first, our condemned criminals—next, perhaps, the inmates of our refuges for incurables—then the hopeless lunatic, the pauper hospital-patient, and generally "him that hath no helper,"—a day when successive generations of students, trained from their earliest years to the repression of all human sympathies, shall have developed a new and more hideous Frankenstein—a soulless being to whom science shall be all in all. *Homo sum: quidvis humanum a me alienum puto.*

And when that day shall come, O my brother-man, you who claim for yourself and for me so proud an ancestry—tracing our pedigree through the anthropomorphoid ape up to the primeval zoophyte—what potent spell have *you* in store to win exemption from the common doom? Will you represent to that grim spectre, as he gloats over you, scalpel in hand, the inalienable rights of man? He will tell you that this is merely a question of relative expediency,—that, with so feeble a physique as yours, you have only to be thankful that natural selection

has spared you so long. Will you reproach him with the needless torture he proposes to inflict upon you? He will smilingly assure you that the *hyperæsthesia*, which he hopes to induce, is in itself a most interesting phenomenon, deserving much patient study. Will you then, gathering up all your strength for one last desperate appeal, plead with him as with a fellow-man, and with an agonized cry for "Mercy!" seek to rouse some dormant spark of pity in that icy breast? Ask it rather of the nether mill-stone.

Lewis Carroll.

13.4 Vivisection Vivisected

Source: The St. James's Gazette, March 19, 1885

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—The dialogue, headed “Vivisection,” which appeared in your journal on March 13, hardly gave, as I venture to think, a complete view of the “pros and cons” of this difficult question. May I hope that the author of that clever *jeu d’esprit* will pardon the liberty I take in attempting a sequel to it, which might very well have occurred in the same house a few hours later?—I am, Sir, your obedient servant,

Lewis Carroll.

March 18.

MR. JUSTICE T.: Oh, come in, Smith! So glad you'll join us in a midnight cigar. Carver and I were just talking over the beating you've had at Oxford—“Science *versus* Sentiment” shall we call it? You don't look the worse for it, though. Beating agrees with your constitution, I fancy!

MR. JOHN SMITH, M.A.: Well, perhaps we don't know when we *are* beaten, as Napoleon said of us. There are more than 5000 members of Convocation, while those who voted were 10 short of the Number of the Beast. But the question is disposed of, I admit. It takes a bigger question than that to tear the Briton from his own fireside. It must be something that touches him in a more sensitive place than his heart!

SIR SAMUEL CARVER, F.R.C.S.: And now it's all over, don't you think, between ourselves, it's a little illiberal of you and your friends to anathematise a branch of Science which some of your best men will tell you has done real service to the human race?

MR. SMITH: Speaking for my party generally (of course there are individual exceptions), we don't anathematise it.

SIR S. CARVER: Well, at any rate you did your best to put an end to it in *Oxford*?

MR. SMITH (*smiling*): Most certainly not!

MR. JUSTICE T.: This is interesting. Do tell us, Smith, what it was you really wanted. I always fancied the papers exaggerated the thing. As they put it, you hadn't a leg to stand on, moral or intellectual.

MR. SMITH: I am quite aware of it. Morally, we are bigots: intellectually, idiots. We ignore all the good that Vivisection, properly conducted, is proved to have done. We desire to exclude it entirely from our University, or, failing that, at any rate to hamper it with restrictions beyond what the Legislature has thought sufficient.

MR. JUSTICE T.: So the papers say.

MR. SMITH: Yet, in fact, we fully recognise the good it has done. We do *not* plead for its total exclusion, but only that it shall not be used for mere teaching-purposes, and that for purposes of research it shall not be practised without anæsthetics.

SIR S. CARVER: I quite admit, with many of my scientific brethren, that it should not be used for teaching-purposes.

MR. JUSTICE T.: And I beg to point out that you have a solemn promise, from the present Professor, that it shall not be so used.

MR. SMITH: That of course would suffice during his tenure of office. We wished to have a security for the *future*: and I dare say, if we had asked no more than this, we might have got an enactment passed, embodying the Professor's promise. The real bone of contention was that we wished it enacted that, even for purposes of research, the Oxford Professor should not perform painful experiments without anæsthetics.

SIR S. CARVER: I can assure you that, in my own practice, I *always* use anæsthetics, excepting when their use would nullify the experiment. Such cases are rare, but they do happen; for instance, in investigating the action of the nerves.

MR. SMITH: I am not prepared to deny that cases may arise where the infliction of pain is justified by the importance of the object. But is it a very extravagant boon to ask that in a University whose function so largely consists in teaching the *young*, this one kind of vivisection should be omitted? There are many of us who do not think this kind of vivisection justified at all, and many, I should hope, of the young to whom the very thought that such things are done in the midst of us is a painful one. Is it quite outrageous to ask that their feelings should be spared this, so long as such research can be conducted in other places?

MR. JUSTICE T.: Oh, but your friends who call it unjustifiable are clearly out of court. They are setting up as better judges than the Legislature!

MR. SMITH: Madness, indeed! How could we hint that the Legislature is fallible? No scientific man has ever breathed a suspicion of its fallibility in the *other* direction, by too much restriction!

SIR S. CARVER: There, I admit, you score one.

MR. JUSTICE T.: But you're not going to have it all your own way, my dear fellow! I wish you had been here in the evening, to hear some of the inconsistencies of your side. Fox-hunting, now. With all your fine feelings about giving pain, what right have you to go and see a fox hunted to death, merely for sport?

MR. SMITH: Personally, I claim no such right. All pain, inflicted for sport, is abhorrent to me. But I must allow that the question is a mixed one, as to *some* sport. Where, for instance, wild beasts have to be exterminated for the safety of man, it seems almost inevitable that the hunter should enjoy the excitement of the chase. But that is a totally different matter from keeping up the breed of some animals, such as foxes, for the sole purpose of sport. That I don't justify for a moment.

MR. JUSTICE T.: As to pigeon-shooting, now?

MR. SMITH (*warmly*): Utterly and entirely unjustifiable.

MR. JUSTICE T.: But, as the ladies were saying just now, the dear Prince goes to Hurlingham!

MR. SMITH: The dear Princess doesn't.

SIR S. CARVER: Had you there, Judge! You can't press the question of sport, unless your man's a sportsman. But you are not a vegetarian, Smith, are you? I suppose you enjoy your turtle-soup, your veal-cutlet, your lobster-salad, as much as most men? Are you aware of the wanton cruelty that is practised in furnishing you with a dinner? Set the vivisectionists against the butchers, in the way of giving pain!

MR. SMITH: Not for one moment would I justify brutal cruelty in *any* one. But which is worst, think you, in the sight of God (who judges by the heart, not the outward act), the ignorant butcher, brought up from childhood to witness brutality and who has never fully realized what he is doing in torturing God's creatures, or the educated and intelligent vivisectionist, who realizes to the last iota all the pain he is giving, and yet deliberately inflicts it for an unworthy object, some meaningless point of science, or perhaps merely to gratify his curiosity?

MR. JUSTICE T.: True enough. *Corruptio optimi pessima.*

MR. SMITH: And may I not turn the tables on *you* for a moment, dear Sir Samuel? When will you and your brother-physiologists take in hand this burning question (I hardly know whether, in this age of burning questions, there is *one* more vital than this), how to put an end to the heart-sickening cry, that rises from the whole brute-creation, that man, their masters, is needlessly torturing them for his own selfish ends? When will you teach us, in words that all may understand, the plain laws of physiology, so that our horses (for instance) may no longer suffer from bearing-reins, and blinkers, and over-driving? What fairer field of experiment could you desire than to ascertain some painless method for killing the creatures we need for food? Depend upon it, the first vivisectionist that does this for us, and lets us sit down to our meals with the certainty that no needless pain has been given in providing them, will have his reward, even in *this* life, if the blessings of thousands on thousands of grateful hearts be any sufficient reward; and in the great day of account it shall be said to him, "inasmuch as thou hast done it to one of the least of these My creatures, thou hast done it unto Me"!

Quoted from
Matthew 25:40

MR. JUSTICE T.: You are getting excited, Smith. Allow me to suggest that it is time for bed.

Part 14

Texts concerning Theatres

14.1 The Guildford Gazette Extraordinary

Source: printed 1870

'If I chance to talk a little wild, forgive me.'—*Shakespeare.*

No. 9999. Dec. 29, 1869.

Quoted from *Henry VIII* by William Shakespeare

Opening of the New Theatre.

(From our Special Correspondent, Mr. LEWIS CARROLL.)

It was towards the close of one of those days of dreamy and delicious languor for which Guildford is so justly celebrated. The unbroken calm of the weather had been pleasingly varied by an incessant hailstorm, and its sultriness subdued by a severe frost, and now the mellow shades of Evening were fast deepening into the brilliant obscurity of Night. At such a moment might have been observed (had there been light enough for the purpose, and any one present to observe) a small but resolute band of wayfares (they numbered a poor thousand at most) wending their solitary way in the direction of the new and spacious Theatre, just about to be opened for its great and long-to-be-remembered Inaugural Entertainment.

Of these travellers (for we must not yet desert the guidance of the great model of Romance-writing) one was older than the other—in fact, it might be said that several of them were older than several others—or, to state it in more general, though less poetical, language, they were of various ages. And here, great G. P. R. JAMES, farewell! We quit thy guiding hand, and assume the pen of the antiquarian and the philosopher.

The earliest instance, afforded us by the annals of our beloved country, of an 'Entertainment' strictly so called, was given under most exceptional circumstances, and with an audience which appears to have consisted of Royalty pure and simple. The incident is embodied in the following lines of rude, yet pathetic, doggrel:—

*Cheerful sang the monks of Ely,
As Knut the King was passing by:
'Row to the shore, Knights,' said the King,
'And let us hear these Churchmen sing!'*

Quoted from *Merry
sang the monks of Ely*
by Cnut the Great

Though the loyalty of an age, whose bards could thus dare to abridge the name of their sovereign (properly Kanute or Canute) into a monosyllable, to suit the exigencies of their verse, may fairly be called in question, yet we may not doubt that it was to the King's ear alone that the lay was addressed: for him alone were those monastic voices raised in harmony—voices which appear, by the way, to have been so low and weak (but whether from fast or feast deponent sayeth not) that the King was driven perforce to bring his boat to land, and moor it at the very feet of the mellifluous, but inaudible, ascetics.

Let us contemplate for a moment the simple condition of things indicated by this venerable tetrastich. Monks and knights appear to have divided society; Music and War we may judge to have been their principal occupations: probably the two verbs most in use in those days were the simple, but most suggestive, monosyllables 'to sing' and 'to shoot.'

The few incidents that occurred between the reigns of Canute and Victoria are all so admirably recorded by the graphic pens of Hume and Macaulay, that we should but insult our readers were we to venture to depict them with our humbler goosequill.

We proceed, then, by a transition which we trust may prove as successful as it is sudden, to the consideration of the memorable epoch, Dec. 28, 1869. Those two simple verbs 'to sing' and 'to shoot' were perhaps, even at that late period, after the lapse of so many centuries, not wholly forgotten.

And both are appropriate to the Entertainment now to be recorded: for the 'singing,' the mere mention of the 'Dirge of Dundee' will suffice for all who had the privilege of being present; while, if it be doubted how 'shooting' could find a place in such a scene, we can only say that if Cupid's darts were not flying thick as hail, it was not for want of bright eyes to rain them down—let each reader lay his hand upon his heart (if he happen to possess one) and make reply.

There *is*, however, we have reason to believe, some deeper allusion in these apparently simple phrases, than we have been able to fathom: for the following cabalistic phrase was on many a tongue during that eventful evening—that 'to have seen sing shoot, and to have heard shoot sing, was a treat well worth coming for.' We have devoted our whole intellectual energies, during several hours, to the task of grappling with this profound enigma, and are compelled at last to leave it, in all its original obscurity, to the sagacity of the reader.

The fact that the Inaugural Entertainment was to be given solely by amateurs lent an additional zest to the evening, and even if the enterprising Manager had not, with his usual liberality, given away orders of admission in almost reckless profusion, the house would still have been filled to overflowing. The reporters of the Press were alone excluded on this occasion, the Manager tersely remarking that there would be 'press enough without them.'

Time would fail us to describe the decorations, and the many contrivances for the comfort of the audience, and we must content ourselves by briefly mentioning a most original feature in the arrangements—the abolition of pit, gallery, and boxes; so that the whole house constituted one magnificent dress-circle. We

append the programme of the performance.¹

So soon as the audience had comfortably seated themselves, and an expectant silence reigned throughout that vast assembly, the following Prologue was delivered by a speaker, invisible to the eye, but in whose genial tones the audience had no difficulty in recognizing the worthy Manager himself.²

The Prologue concluded, the curtain rose on the scene from 'King Lear' where the blinded Duke of Gloucester is discovered by the King, and the elaborate costume of the latter at once suggested a sufficient reason for the Manager not having appeared *in propria personâ* to recite the Prologue. We have much pleasure in presenting our readers with the text of the second Act.³

This portion of the Charade was succeeded by a scene from Miss Edgeworth's lively drama 'Old Poz,' which served by way of contrast to heighten the effect both of the Tragedy which preceded it and of the Dirge which followed it.

The Muses of Tragedy and of Comedy having been thus efficiently represented, it remained only to cater for the votaries of the more modern Muse, (not numbered among the tuneful Nine,) yclept Low Comedy or Face; and for their delight was provided an abridged version of the popular favourite, 'Poor Pillicoddy.'

The well-known interpolated song in this farce, though usually omitted in representation, was on the present occasion re-introduced with considerable effect. The words are by Lord Byron; but, as our readers may not have the volume at hand to refer to, we here print it *in extenso*.

Now what's the most appropriate thing
To do whilst waiting at the wing?
Of course you guess the answer?
Spoken [All give it up? Did I hear any one allude to the name of our worthy
host? Why, of course it is——]

Parody on Hoop de dooden doo by A. Nish

Synge.
And I hope the tune will do!
I sing the joys of married life,
Which Pillicoddy finds so rife.
In fact, good folk, you'll find a wife
is——Hoop de dooden doo!

[Produces large bundle of bills.]

Her bills! Ten pounds for boots, I see:
And six for gloves, and—oh dear me!
Here's just one hundred ninety-three
for——Hoop de dooden doos!

¹Remark: Programme omitted here: Charade in four acts (*Killiecrankie*): Act I: Scene from 'King Lear', Act II (In Five Scenes): Episode from 'Kenilworth' (Versified), Act III: Old Poz (Abridged), Act IV (The whole word): A Dirge over a Hero; Charades (In dumb show); Concluding with Poor Pillicoddy (Curtailed)

²Remark: "Prologue. Written and Spoken by Mr. W. W. FOLLETT SYNGE" omitted here

³Remark: "Episode from 'Kenilworth.' (Versified.) Written by Mr. W. W. FOLLETT SYNGE" omitted here

[Produces written paper, piece of chintz, and an enormous lace cuff.]

Commissions. 'Twenty yards of stuff
To pattern—try and match this cuff—
And—just bring home—another Muff!'
That's Hoop de dooden doo!

[Pantomimic action expression of parental affection.]

The little kids! It seemed a treat
At first to see them frisk and bleat—
But now I find that they—*can—eat—*
like—Hoop de dooden doo!

So, gin a body meet a body
And make a match, some day you'll modi-
fy your views like Pillicoddy,

Quoted from *Comin thro' the Rye* by Robert Burns

Spoken [and admit that all the so-called joys of matrimonial life are, when carefully analysed and boiled down, nothing in the world but—]

Hoop de dooden doo!

Sir, are you married? Yes, you sigh!
Well, 'Happy man!' I make reply.
What, single? 'Lucky dog!' say I,

Spoken [and conclude with the valuable and original remark with which I began]

Hoop de dooden doo!

Detailed criticism on an amateur performance would, we think, be out of place, nor can it be necessary to remind the audience how zealously the actors exerted themselves for their amusement, nor the actors with what ready sympathy the audience welcomed their efforts. It is enough to record that the Entertainment, as a whole, was most deservedly successful. The theatrical portion of the evening was brought to a close by the following⁴

On the conclusion of the theatrical portion of the Entertainment, an excellent supper was provided for the guests, after which dancing was kept up to a late hour with much spirit, and the brilliance of the court-dresses worn by the ladies in 'Kenilworth' and retained throughout the evening, enhanced in no small degree the effect produced by the mazy motion of that gay and glittering assemblage. 'Fast and furious' was the fun, but the excitement rose to a climax when the indefatigable Manager, most kindly aided by the wife of our great ecclesiastical novelist, delighted the assembled company by their consummate execution of an Irish jig. So brilliant was the performance of each in this most spirited of dances, that it is scarcely possible to award to either the palm of superiority: all we can say is, that all the previous Terpsichorean feats of the

⁴Remark: "Epilogue. Written by Mr. W. W. FOLLETT SYNGE, and Spoken by Master THACKERAY SYNGE and Miss EVA SHUTE" omitted here

evening were fairly overtopped and thrown into the shade, and that the spectators applauded with an unbounded enthusiasm this richest, most comical, and most memorable gem of their evening's amusement.

And thus came to an end an evening not soon to be forgotten, and as each departing guest wended his homeward way, and cast, in the words of the poet, a 'longing lingering look behind,' not even the frosty air of the wintry night could wholly efface a glow of gratitude to the hospitable host and hostess who had provided the means for so pleasant a meeting—gratitude to which the writer of the present article desires here to add his own earnest tribute of thanks.

We cannot more fitly conclude this hasty sketch than by furnishing our readers with the words of the 'Dirge of Dundee,' written by Mr. W. W. FOLLETT SYNGE, and sung by Miss ALICE SHUTE, in the character of the Genius of Scotland, while soldiers are carrying from the field the bier on which rests the body of the hero.⁵

14.2 Misleading Playbills

Source: The Standard, October 10, 1879

To the Editor of the Standard

SIR,—Will you kindly allow me space in your columns for a word of warning to the play-going public against putting implicit confidence in the advertisements and playbills of the Strand Theatre?

Last Saturday afternoon I went there with three friends; we had purchased our tickets a week beforehand, and I myself had come up to town for the day from a distance of nearly thirty miles, with the special purpose of seeing Miss St. John play Madame Favart. Her name was advertised as usual in the papers: it occupied its usual place in the bill handed to us in the theatre; but the part was played by a substitute, and that without a word of explanation or apology for the absence of the principal performer. I feel sure that my feeling of disappointment, and of having failed to get that for which I had paid my money, was shared by many of those present.

As the name of Miss St. John continues to be advertised in the papers, I think a timely warning may save others from being misled, as I was, by an artifice unworthy of a theatre like the Strand.

I am, Sir, your obedient servant,

Lewis Carroll.

14.3 Education for the Stage

February 27, 1882

Source: The St. James's Gazette, February 27, 1882

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—There is a large class of the British Public who attend theatres and take an intelligent interest in plays, keenly enjoying all the good they find in them, and resenting with equal keenness all that is bad or even worthless. There is another class, who abstain from them on account of the evils they find associated with them, but who regard those evils as being accidental rather than essential, and as robbing the Stage of that influence for good which it might otherwise exercise on Society. And there is yet a third class, who neither attend theatres nor believe in the possibility of raising the Stage to the position of an educator of Society; but who would gladly recognize in it, if only it could be freed from its attendant evils, a source of innocent amusement for the many who find recreation of one kind or another necessary for their mental and bodily health.

To these three classes of your readers I desire, with your kind permission, to say a word. I do not propose, within the narrow limits of this letter, to address even a word to those who regard the Stage as essentially evil; nor to those who view its evils with indifference, or even with relish, and for whom impurity and profanity have more attraction than good acting.

An effort is being made to set on foot in England an institution somewhat similar to the *Conservatoire* in Paris, where actors and actresses may receive a thorough and systematic education. The proposed “Dramatic School of Art” has the sympathy and support of the leading members of the dramatic profession—I content myself with instancing the honoured names of Mrs. Kendal and Mr. Irving—but, unless well supported by the general public, it has, I fear, but little chance of gaining a sure foot-hold and becoming a permanent institution.

I need not dwell on the many advantages that would result to all—players and playgoers alike—if the Stage were supplied with competent and trained performers instead of the tyros whom managers must often accept for want of better material; but it may be worth while to recall one or two of the “thousand natural shocks” that the playgoer is “heir to,” owing to the players’ want of training. I will take three instances only—faults in elocution, in rendering the text of the play, and in “business” (the *action* of a play, as distinct from the *words*).

How often we find a pointed and witty dialogue entirely thrown away by the words being so ill-pronounced that only half the audience can hear them, while the unlucky holder of a back stall or of a seat in the second row of the dress-circle feels like a deaf man at a dinner-party, at once tantalized by the unmeaning fragments that reach his ear and exasperated by the laughter of those who have caught the joke! How often, again, do speakers of all sorts—players, preachers, and others—forget that, as the strength of a chain is that of its weakest link, so the audibility of a sentence is that of its least audible portion. Each fresh paragraph they begin in a clear resonant voice; but with the approach of the full-stop the sound dies away, and the last few words are

Quoted from *Hamlet*
by William
Shakespeare

pronounced *sotto voce*, giving the sentence all the vagueness, but, alas! none of the beauty, of a vignette. I have heard a clergyman so give out the Banns of Marriage that the most eager listener could learn no more than that two human beings proposed to commit matrimony; their names remained an unfathomable mystery. Let any visitor at the Lyceum listen to Miss Ellen Terry, and then try to realize what a rich treat a play would be if the other players had but half of her marvellous powers of elocution!

Who's there?
Ratcliff, my lord, 'tis I. The early village cock
Hath twice done salutation to the morn.

Quoted from *Richard III* by William Shakespeare

What a difference it makes if the speaker, as was once amusingly depicted by *Punch*, calmly announces himself with

My lord, tis I the early village cock!

Quoted from *Punch*, July 21, 1855

And when a repartee is to be delivered, how agonizing it is, instead of being allowed to watch the mental process of the speaker—first grasping the meaning of the words that lead up to it, and then, after a moment's pause, suddenly lighting on the happy thought—to see that the reply is as ready as an answer in a catechism, and is begun before the other speaker has well got the words out of his mouth!

How much good and appropriate "business" would add to our enjoyment of a play we can hardly realize till we get it. For want of it we are for ever being disillusionized, and dragged back out of the realms of fancy into common life, and our "sweet dream" falls "into nothing."

Ah! my sighs, my tears,
My clenched hands; for lo! the poppies hung
Dew-dabbled on their stalks, the oused sung
A heavy ditty, and the sullen day
Had chidden herald Hesperus away.

Quoted from *Endymion* by John Keats

Quoted from *Endymion* by John Keats

But I must not trespass on your space by dwelling further on a subject of ever-widening area. Let me simply say, in conclusion, that it is only as an outsider and an amateur that I plead the cause of the Dramatic School. I am unconnected with its promoters, and it is by no suggestion of theirs that I have written this letter; but I feel that the work is a good one, that it deserves support and encouragement, and that every one who wishes well to the Stage should do what he can. Suppose every one of the thousands who crowd our theatres were just for once to deny himself (oh! almost superhuman effort of self-sacrifice!) one single visit he had projected to the play, and to give the value of his ticket to the fund, the future of the new School would indeed be nobly provided for. This, of course, is not to be expected; yet surely in the three classes I named at the opening of this letter enough may be found who are capable of taking a not entirely selfish view of this matter, and willing to give *something* without expecting a *quid pro quo*.

The treasurer of the fund is Mr. Cecil Raleigh, of 35, York Street, Portman Square; the bankers are Messrs. Robarts, Lubbock, and Co., of 15, Lombard Street, E.C. Need I say more?—I am, Sir, your obedient servant,
Lewis Carroll.

February 23.

March 6, 1882

Source: The St. James's Gazette, March 6, 1882

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—The letter of mine, which you published on the 27th of February under the above title, having elicited two replies, one friendly to the scheme and one hostile, in your paper on the 2nd of March, I shall be grateful if you will let me say a few words in reply.

Both writers seem to me to suggest for the projected "Dramatic School of Art" work which lies outside its proper sphere of action. "Sir Charles Young" holds that "one of the most effectual and practical steps they can take at the outset is to use their best endeavours to dissipate what still remains of the notion that to 'go upon the stage' is, for educated ladies and gentlemen, a proceeding highly derogatory to their social position." The new School will, I trust, do much *indirectly* to dissipate such a notion; but, since those who hold it are little likely to offer themselves as students, it cannot reasonably hope to exert any *direct* influence in this matter. "Spectator" finds that the committee, "as far as he can make out" (an amount we have no data to determine) is "mainly composed of fashionable *dilettanti*." He adds, "I never knew any case in which the interference of *dilettanti* was productive of much good to the British drama." Even if he were right (which is open to question) as to the character of the committee it surely is not a necessary sequence that the teaching staff of the School should be also *dilettanti*? Yet this sequence is indispensable to his argument. He concludes with these words: "How Lewis Carroll's friends intend to supply the requisites at which I have hinted I do not understand; and until I see that they are trying to do so, and have some fair chance of success, they will not draw a sixpence from my pocket." Is it not a little premature thus to raise the question *how* the committee (whom I cannot presume to call my "friends," not having the honor of their personal acquaintance) "intend to supply" these requisites, without first settling whether they *do* intend it? The requisites are as follows:—"As to those who seek to study the actor's art, two things are essential to success in such a pursuit—first, the advantage of discriminating applause and censure; next the opportunity for frequent variety in the impersonations which they undertake." Surely the only institutions which can supply these "requisites" are a school for audiences and a school for managers. Such schools are not as yet projected; when they are, their promoters may cheer themselves with the hope of sharing the donation so generously offered by "Spectator."

Is it not a little hard on the new "School" to assign to it functions it has never assumed, and then take its friends to task because it fails to fulfil them? You might just as well find fault with Jumbo for not having secured himself against expatriation by taking his seat in the House of Commons.—I am, Sir, your obedient servant,

Lewis Carroll. March 4.

14.4 “Alice” on the Stage

Source: The Theatre, April 1887

“—you know you say things are ‘much of a muchness’; did you ever see such a thing as a drawing of a muchness?” ALICE IN WONDERLAND

Alice and the Dormouse

From a Photograph specially taken for “The Theatre” by Rakraud, 263, Oxford Street, W.

By Lewis Carroll

“Look here; here’s all this Judy’s clothes falling to pieces again.” Such were the pensive words of Mr. Thomas Codlin; and they may fitly serve as a motto for a writer who has set himself the unusual task of passing in review a set of puppets that are virtually his own—the stage-embodiments of his own dream-children.

Quoted from *The Old Curiosity Shop* by Charles Dickens

Not that the play itself is in any sense mine. The arrangement, in dramatic form, of a story written without the slightest idea that it would ever be so adapted, was a task that demanded powers denied to me, but possessed in an eminent degree, so far as I can judge, by Mr. Savile Clarke. I do not feel myself qualified to criticise his play, as a play; nor shall I venture on any criticism of the players, as players.

What is it, then, I have set myself to do? And what possible claim have I to be heard? My answer must be that, as the writer of the two stories thus adapted, and the originator (as I believe, for at least I have not *consciously* borrowed them) of the ‘airy nothings’ for which Mr. Savile Clarke has so skilfully provided, if not a name, at least, a ‘local habitation,’ I may without boastfulness claim to have a special knowledge of what it was I meant them to be, and so a special understanding of how far that intention has been realised. And I fancied there might be some readers of THE THEATRE who would be interested in sharing that knowledge and that understanding.

Quoted from *A Midsummer Night’s Dream* by William Shakespeare

Many a day had we rowed together on that quiet stream—the three little maidens and I—and many a fairy-tale had been extemporised for their benefit—whether it were at times when the narrator was ‘i’ the vein,’ and fancies unsought came crowding thick upon him; or at times when the jaded Muse had to be goaded into action, and plodded meekly on, more because she had to say something than that she had something to say—yet none of those many tales got written down: they lived and died, like summer midges, each in its own ‘golden afternoon,’ until there came a day when, as it chanced, one of my little listeners petitioned that the tale might be written out for her. That was many a year ago, but I distinctly remember, now as I write, how, in a desperate attempt to strike out some new line of fairy-lore, I had sent my heroine straight down a rabbit-hole, to begin with, without the least idea what was to happen afterwards. And so, to please a child I loved (I don’t remember any other motive), I printed in manuscript, and illustrated with my own crude designs—designs that rebelled against every law of Anatomy or Art (for I had never had a lesson in drawing)—the book which I have just had published in facsimile. In writing it out, I added many fresh ideas, which seemed to grow of themselves upon the original stock; and many more added themselves when, years afterwards, I wrote it all over again for publication: but (this may interest some readers of ‘Alice’ to know) every such idea, and nearly every word of the dialogue, *came of itself*. Sometimes an idea comes at night, when I have had to get up and strike a light to note it down—sometimes when out on a lonely winter walk, when I have had to stop, and with half-frozen fingers jot down a few words which should keep the new-born idea from perishing—but whenever or however it comes, *it comes of itself*. I cannot set invention going like a clock, by any voluntary winding-up: nor do I believe that any *original* writing (and what other writing is worth preserving?) was ever so produced. If you sit down, unimpassioned and uninspired, and *tell* yourself to write for so many hours, you will merely produce (at least I am sure *I* should merely produce) some of that article which fills, so far as I can judge, two-thirds of most magazines—most easy to write, most weary to

Quoted from *Richard III* by William Shakespeare

read—men call it ‘padding,’ and it is, to my mind, one of the most detestable things in modern literature. ‘Alice’ and the ‘Looking-Glass’ are made up almost wholly of bits and scraps, single ideas which came of themselves. Poor they may have been; but at least they were the best I had to offer: and I can desire no higher praise to be written of me than the words of a Poet, written of a Poet,

“He gave the people of his best:
The worst he kept, the best he gave.”

Quoted from *To—* by
Alfred Lord Tennyson

I have wandered from my subject, I know: yet grant me another minute to relate a little incident of my own experience. I was walking on a hill-side, alone, one bright summer day, when suddenly there came into my head one line of verse—one solitary line—‘For the Snark *was* a Boojum, you see.’ I knew not what it meant, then: I know not what it means, now: but I wrote it down: and, some time afterwards, the rest of the stanza occurred to me, that being its last line: and so by degrees, at odd moments during the next year or two, the rest of the poem pieced itself together, that being its last stanza. And since then, periodically, I have received courteous letters from strangers, begging to know whether ‘the Hunting of the Snark’ is an allegory, or contains some hidden moral, or is a political satire: and for all such questions I have but one answer, “*I don’t know!*” And now I return to my text, and will wander no more.

Stand forth, then, from the shadowy past, ‘Alice,’ the child of my dreams! Full many a year has slipped away, since that ‘golden afternoon’ that gave thee birth, but I can call it up almost as clearly as if it were yesterday—the cloudless blue above, the watery mirror below, the boat drifting idly on its way, the tinkle of the drops that fell from the oars, as they waved so sleepily to and fro, and (the one bright gleam of life in all the slumberous scene) the three eager faces, hungry for news of fairy-land, and who would not be said ‘nay’ to: from whose lips “tell us a story, please,” had all the stern immutability of Fate!

What wert thou, dream-Alice, in thy foster-father’s eyes? How shall he picture thee? Loving, first, loving and gentle: loving as a dog (forgive the prosaic simile, but I know no earthly love so pure and perfect), and gentle as a fawn: then courteous—courteous to *all*, high or low, grand or grotesque, King or Caterpillar, even as though she were herself a King’s daughter, and her clothing of wrought gold: then trustful, ready to accept the wildest impossibilities with all that utter trust that only dreamers know; and lastly, curious—wildly curious, and with the eager enjoyment of Life that comes only in the happy hours of childhood, when all is new and fair, and when Sin and Sorrow are but names—empty words, signifying nothing!

And the White Rabbit, what of *him*? Was *he* framed on the ‘Alice’ lines, or meant as a contrast? As a contrast, distinctly. For *her* ‘youth,’ ‘audacity,’ ‘vigour,’ and ‘swift directness of purpose,’ read ‘elderly,’ ‘timid,’ ‘feeble,’ and ‘nervously shilly-shallying,’ and you will get *something* of what I meant him to be. I *think* the White Rabbit should wear spectacles. I am sure his voice should quaver, and his knees quiver, and his whole air suggest a total inability to say ‘Bo!’ to a goose!

But I cannot hope to be allowed, even by the courteous Editor of THE THEATRE, half the space I should need (even if my *reader’s* patience would hold out) to discuss each of my puppets one by one. Let me cull from the two books a Royal Trio—the Queen of Hearts, the Red Queen, and the White Queen. It was certainly hard on my Muse, to expect her to sing of *three* Queens, within such

brief compass, and yet to give to each her own individuality. Each, of course, had to preserve, through all her eccentricities, a certain queenly *dignity*. That was essential. And, for distinguishing traits, I pictured to myself the Queen of Hearts as a sort of embodiment of ungovernable passion—a blind and aimless Fury. The Red Queen I pictured also as a Fury, but of another type; *her* passion must be cold and calm; she must be formal and strict, yet not unkindly; pedantic to the tenth degree, the concentrated essence of all governesses! Lastly, the White Queen seemed, to my dreaming fancy, gentle, stupid, fat and pale; helpless as an infant; and with a slow, maundering, bewildered air about her, just *suggesting* imbecility, but never quite passing into it; *that* would be, I think, fatal to any comic effect she might otherwise produce. There is a character strangely like her in Mr. Wilkie Collins's novel 'No Name:' by two different yet converging paths we have somehow reached the same ideal, and Mrs. Wragg and the White Queen might have been twin-sisters.

As it is no part of my present purpose to find fault with any of those who have striven so zealously to make this 'dream-play' a waking success, I shall but name two or three who seemed to me specially successful in realising the characters of the story.

None, I think, was better realised than the two undertaken by Mr. Sydney Harcourt, 'the Hatter' and 'Tweedledum.' To see him enact the Hatter was a weird and uncanny thing, as though some grotesque monster, seen last night in a dream, should walk into the room in broad daylight, and quietly say 'good morning!' I need not try to describe what I mean the Hatter to be, since, so far as I can now remember, it was exactly what Mr. Harcourt had made him: and I may say nearly the same of Tweedledum: but the Hatter surprised me most—perhaps only because it came first in the play.

There were others who realised my ideas nearly as well; but I am not attempting a complete review: I will conclude with a few words about the two children who played 'Alice' and 'the Dormouse.'

Of Miss Phœbe Carlo's performance it would be difficult to speak too highly. As a mere effort of memory, it was surely a marvellous feat for so young a child, to learn no less than two hundred and fifteen speeches—nearly three times as many as Beatrice in "Much Ado About Nothing"! But what I admired most, as realising most nearly my ideal heroine, was her perfect assumption of the high spirits, and readiness to enjoy *everything*, of a child out for a holiday. I doubt if any grown actress, however experienced, could have worn this air so perfectly; *we* 'look before and after, and sigh for what is not': a child never does *this*: and it is only a child that can utter from her heart the words poor Margaret Fuller Ossoli so longed to make her own, 'I am all happy *now*!'

And last (I may for once omit the time-honoured addition 'not least,' for surely no tinier maiden ever yet achieved so genuine a theatrical success?) comes our dainty Dormouse. 'Dainty' is the only epithet that seems to me exactly to suit her: with her beaming baby-face, the delicious crispness of her speech, and the perfect realism with which she makes herself the embodied essence of Sleep, she is surely the daintiest Dormouse that ever yet told us 'I sleep when I breathe!' With the first words of that her opening speech, a sudden silence falls upon the house (at least it has been so every time *I* have been there), and the baby-tones sound strangely clear in the stillness. And yet I doubt if the charm is due only to the incisive clearness of her articulation; to me there was an even greater charm in the utter self-abandonment and conscientious *thoroughness* of her acting. If

Quoted from *To a Skylark* by Percy Bysshe Shelley

Quoted from *Memoirs of Margaret Fuller Ossoli, Vol. II* by Margaret Fuller Ossoli

Dorothy ever adopts a motto, it ought to be 'Thorough.' I hope the time may soon come when she will have a better part than 'Dormouse' to play—when some enterprising manager will revive the 'Midsummer Night's Dream,' and do his obvious duty to the Public by securing Miss Dorothy d'Alcourt as 'Puck'!

It would be well indeed for our churches if some of the clergy could take a lesson in enunciation from this little child; and better still, for 'our noble selves,' if *we* would lay to heart some things that she could teach us, and would learn by her example to realise, rather more than we do, the spirit of a maxim I once came across in an old book, "whatsoever thy hand findeth to do, *do it with thy might.*"

Quoted from
Ecclesiastes 9:10

14.5 Children in Theatres

Source: The St. James's Gazette, July 19, 1887

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—In your Gazette of this day (July 16) I see an account of a meeting of ladies, held in South Kensington, in support of a movement the object of which is to make it illegal for children under ten years of age to be engaged in performances at theatres and pantomimes.

One of the speakers (with a true ladylike disregard for that law in statistics, which tells us that numbers are only relative magnitudes, and have no argumentative value unless stated as percentages) informed the meeting that “there were known to be 10,000 children employed in connection with pantomimes throughout the country,” and that “the physical strain of this work on very little children was exceedingly heavy, and she had personally known cases in which it had led to fatal results.”

With the utmost respect for the motives of this lady, I cannot but think that her audience must have been in the same frame of mind as the judge who declined to hear the pleadings on both sides “because it confused him so,” if they accepted without question such sweeping assertions as that “the physical strain is exceedingly heavy,” or the deduction evidently meant to be drawn from the statement that certain cases “had led to fatal results.” As, in these days, ladies know everything (a category in which Latin may fairly be included), I may perhaps without pedantry address her with the words *audi alteram partem*.

As to the fact that the fair speaker “had personally known cases in which it had led to fatal results,” I would venture to suggest that if she would devote a short time to tabulating (with a due regard for percentages) the “cases” of high pressure in Board-Schools which “have led to fatal results,” or even the “cases” of “three children sliding on the ice” which “have led to fatal results,” it might perhaps cause her to modify her views.

As to her assertion that “the physical strain is exceedingly heavy,” I demur to it altogether as a matter of fact. The “cases” of children “personally known to” myself, some in shools and some in theatres, are very many—as many, possibly, as those known to the speaker whose words I have quoted: and I deliberately assert that, while I have known several cases of complete break-down in health, due to the physical strain of competitive examinations, I have met with none, where the strain could even be called “heavy,” among children employed in drama or pantomime.

Such counter-arguments as that stage-children are well-paid, and that they bring sorely-needed help to very poor parents who are straining their utmost to support large families of young children, are well enough in themselves, but go for nothing unless the “physical strain” objection can first be disposed of.

May I relate my experiences of yesterday, and thus, even if I cannot “point a moral,” at least “adorn a tale”?

I spent yesterday afternoon at Brighton, where for five hours I enjoyed the society of three exceedingly happy and healthy little girls, aged twelve, ten, and seven. We paid three visits to the houses of friends: we spent a long time on the Pier, where we vigorously applauded the marvellous under-water performances

Quoted from *The Vanity of Human Wishes* by Samuel Johnson

of Miss Louey Webb, and invested pennies in every mechanical device which invited such contributions and promised anything worth having, for body or mind, in return: we even made an excited raid on head-quarters, like Shylock with three attendant Portias, to demand the “pound of flesh”—in the form of a box of chocolate-drops—which a dyspeptic machine had refused to render. I think that any one, who could have seen the vigour of *life* in those three children—the intensity with which they enjoyed everything, great or small, that came in their way—who could have watched the younger two running races on the Pier, or have heard the fervent exclamation of the eldest at the end of the afternoon, “We *have* enjoyed ourselves!”—would have agreed with me that here, at least, there was no excessive “physical strain,” nor any *imminent* danger of “fatal results”!

But these, of course, were *not* stage children? They had never done anything more dangerous than Board-school competition? Far from it: all three are on the stage—the eldest having acted for five years at least, and even the tiny creature of seven having already appeared in four dramas!

But, at any rate, it is their holiday-time, and they are not at present suffering the “exceedingly heavy strain” of work on the stage? On the contrary. A drama, written by Mr. Savile-Clarke, is now being played at Brighton: and in this (it is called “Alice in Wonderland”) all three children have been engaged, with only a month’s interval, ever since Christmas: the youngest being “Dormouse” as well as three other characters—the second appearing, though not in a “speaking” part—while the eldest plays the heroine, “Alice”—quite the heaviest part in the whole play, and, I should think, the heaviest ever undertaken by a child: she has no less than 215 speeches! They had been acting every night this week, and *twice* on the day before I met them, the second performance lasting till after half-past ten at night—after which they got up at seven next morning to bathe!

That such (apparently) severe work should co-exist with blooming health and buoyant spirits seems at first sight a paradox: but I appeal to any one who has ever worked *con amore* at any subject whatever to support me in the assertion that, when you really love the subject you are working at, the “physical strain” is absolutely *nil*: it is only when working “against the grain” that any strain is felt. And I believe the apparent paradox is to be explained by the fact that a taste for *acting* is one of the strongest passions of human nature, that stage-children show it nearly from infancy, and that, instead of being, as these good ladies imagine, miserable drudges who ought to be celebrated in a new “Cry of the Children,” they simply *rejoice* in their work, “even as a giant rejoiceth to run his course.”—I am, Sir, your obedient servant,
Lewis Carroll.

19:5

July 16.

14.6 The Stage and the Spirit of Reverence

Source: The Theatre, June 1888

By Lewis Carroll

This article is *not* going to be a sermon in disguise. This I protest, at the outset, knowing how entirely usage—a mistaken usage, as I think—has limited the word to *religious* topics only, and that the reader is only too likely to turn this page hastily over, muttering “*Chacun son goût*.” This is meant for sectarians of *some* kind. *I* have no such narrow sympathies. Talk to me as a *man*, and I’ll listen!”

But that is exactly what I want to do. I want to talk to the play-going, or play-writing reader, who may honour me with his attention, as a *man*: not as a churchman, not as a Christian, not even as a believer in God—but simply as a man who recognises (*this*, I admit, is essential) that there is a distinction between good and evil; who honours good men and good deeds, simple as being good; and who realises that from evil men and evil deeds comes much, if not all, of the sorrow of life.

And may not the word “good,” also, have a broader meaning than usage has assigned to it? May it not fairly include all that is brave, and manly, and true in human nature? Surely a man may honour *these* qualities, even though he own to no *religious* beliefs whatever? A striking example of *this* kind of “reverence” is recorded of the robber-tribes of Upper Scinde, during Sir Charles Napier’s campaign (I quote from a lecture by Robertson, of Brighton, on “The Influence of Poetry on the Working Classes”):—

“A detachment of troops was marching along a valley, the cliffs overhanging which were crested by the enemy. A sergeant, with eleven men, chanced to become separated from the rest by taking the wrong side of a ravine, which they expected soon to terminate, but which suddenly deepened into an impassable chasm. The officer in command signalled to the party an order to return. They mistook the signal for a command to charge; the brave fellows answered with a cheer, and charged. At the summit of the steep mountain was a triangular platform, defended by a breast-work, behind which were seventy of the foe. On they went, charging up one of these fearful paths, eleven against seventy. The contest could not long be doubtful with such odds. One after another they fell: six upon the spot, the remainder hurled backwards; but not until they had slain nearly twice their own number.

“There is a custom, we are told, amongst the hillsmen, that when a great chieftain of their own falls in battle, his wrist is bound with a thread either of red or green, the red denoting the highest rank. According to custom, they stripped the dead, and threw their bodies over the precipice. When their comrades came, they found their corpses stark and gashed; but round both wrists of every British hero was twined the red thread!”

In “reverence” such as this I am happy to believe that the standard reached on the Stage is fully as high as in the literature of Fiction, and distinctly higher than what often passes without protest in Society.

Take, for instance, the treatment of *vice*. In Fiction and in many a social circle, vice is condoned, and sentiments utterly vile and selfish are freely expressed, in language that would be hissed off the stage of a respectable theatre, unless put into the mouth of the stage “villain.” In the “Silver King,” as I saw it some

years ago, when the gentlemanly scoundrel, splendidly acted by Mr. Willard, sent the coarser scoundrel, who served as his tool on the hateful mission of turning out of doors the poor mother whose child was dying, it was good to hear the low fierce hiss that ran through the audience as the old wretch went off. Any one who witnessed that fine drama would, I think, believe with me that those who thus hiss—evil as their own lives may be in some cases—yet have their better moments, when the veil is lifted, when they see Sin in all its native hideousness, and shudder at the sight!

And, for an example of the sympathy shown by play-goers for what is pure and good, I may recall the experience of a few weeks back, when I went to see “The Golden Ladder” (produced by the same conscientious actor and manager—Mr. Wilson Barrett—who gave us “The Silver King”), and heard with delight the ripple of applause which greeted the soliloquy of the comical old greengrocer, Mr. George Barrett, about his child, to whom he has given the ambitious name “Victoria Alexandra.” “And I giv her them two names, because they’re the best two names as is!” That ripple of applause seemed to me to say “Yes, the very sound of those names—names which recall a Queen whose spotless life has for many long years been a blessing to her people, and a Princess who will worthily follow in her steps—is sweet music to English ears!”

The reader can no doubt recall many occasions when Pit and Gallery have shown equally keen sympathy with self-denial, generosity, or any of the qualities that ennoble human nature. I will content myself with two more examples.

Years ago I saw Mr. Emery play the hero of “All is not Gold that Glitters”—a factory-owner, with a rough manner but a tender heart; and I well remember how he “brought down the house,” when speaking of the “hands” employed in his factory, with the words, “And a’ couldn’t lie down and sleep in peace, if a’ thowt there was man, woman, or child among ’em as was going to bed cold and hungry!” What mattered it to us that all this was fiction? That the “hands,” so tenderly cared for, were creatures of a dream? We were not “reverencing” that actor only, but every man, in every age, that has ever taken loving thought for those around him, that ever “hath given his bread to the hungry, and hath covered the naked with a garment.”

Quoted from Ezekiel
18:7

My other example shall be a memory of the greatest actor our generation has seen—one whose every word and gesture seemed inspired, and made one feel “He has me in his power; he can make me laugh and weep as he will!”—I mean Frederick Robson. Who, that ever saw him in “The Porter’s Knot”, can forget the delicious pathos of the scene where the old father, who has sacrificed the earnings of a lifetime to save his son’s reputation and send him abroad, is in an innocent conspiracy, with the girl to whom his son is betrothed, to keep the old mother happy by reading her a letter they pretend to have come from her boy. Unknown to him, the loving girl has resolved on giving her last earnings to the old couple, and has added a postscript. “Dear Mother,—I am getting on so well that I send you this five-pound note,” which the old man, reading the letter to his wife, comes upon so unexpectedly that he nearly betrays the whole plot. Then came the “aside”—with that humorous glance at the audience that none ever gave as he did—“Well! This here has growed since the morning!” And then, suddenly detecting the loving stratagem, and shaking his fist at the girl, “Oh, you little *rascal!*” As Borachio would say, “I tell this story vilely.” Would that any words of mine *could* convey to the reader the infinite tenderness that breathed in those whispered “words of unmeant bitterness”!

Quoted from
Christabel by Samuel
Taylor Coleridge

And now, before narrowing the field of discussion and considering how “reverence” is due to subjects connected with religion, I wish to give to this word also a broader sense than the conventional one. I mean by it simply a belief in *some* good and unseen being, above and outside human life as we see it, to whom we feel ourselves responsible. And I hold that “reverence” is due, even to the most degraded type of “religion,” as embodying in a concrete form a principle which the most absolute Atheist professes to revere in the abstract.

These subjects may be classed under two headings, according as they are connected with the principle of good or with that of evil. Under the first heading we may name the Deity, and good spirits, the act of prayer, places of worship, and ministers; under the second, evil spirits and future punishment.

The “irreverence” with which such topics are sometimes handled, both on and off the Stage, may be partly explained by the fact (not unlikely to be overlooked) that no word has a meaning *inseparably* attached to it; a word means what the speaker intends by it, and what the hearer understands by it, and that is all.

I meet a friend, and say “Good morning!” Harmless words enough, one would think? Yet possibly, in some language he and I have never heard, these words may convey utterly horrid and loathsome ideas. But are *we* responsible for this? This thought may serve to lessen the horror of some of the language used by the lower classes, which, it is a comfort to remember, is often a mere collection of unmeaning *sounds*, so far as speaker and hearer are concerned.

And even where profane language seems really blameworthy, as being consciously and deliberately used, I do not think the worst instances occur on the Stage; you must turn for such to fashionable Society and popular Literature.

No type of anecdote seems so sure to amuse the social circle as that which turns some familiar Bible-phrase into a grotesque parody. Sometimes the wretched jest is retailed, half-apologetically, as said by a child, “and, of course,” it is added, “the *child* meant no harm!” Possibly: but does the *grown man* mean no harm, who thus degrades what he ought to treat with reverence, just to raise a laugh?

Again, can such jesting as that of the “Ingoldsby Legends,” where evil spirits are treated as subjects for uproarious merriment, be tolerated by any one who realises what “evil” means, whether in disembodied spirits (whose existence he may possibly doubt) or in living men and women? Shall the curse of all the race, the misery of all the ages, serve us for a passing *jest*?

But the lowest depths of conscious and deliberate irreverence that my memory recalls, have been, I am sorry to say, the utterances of *reverend* jesters. I have heard, from the lips of clergymen, anecdotes whose horrid blasphemy outdid anything that would be even *possible* on the Stage. Whether it be that long familiarity with sacred phrases deadens one’s sense of their meaning, I cannot tell: it is the only excuse I can think of: and such a theory is partly supported by the curious phenomenon (which the reader can easily test for himself) that if you repeat a word a great many times in succession, however suggestive it may have been when you began, you will end by divesting it of every shred of meaning, and almost wondering how you could ever have meant anything by it!

How far can the Stage use of oaths, or phrases introducing the name of the Deity, be justified? To me it is only when lightly and jestingly uttered that they seem profane. Used gravely, and for a worthy purpose, they are at any rate not to be condemned by any appeal to the *Bible*: one of the loveliest pieces of its prose-poetry, the well-known “Entreat me not to leave thee,” &c., ends with an undeniable oath, “The Lord do so to me, and more also, it aught but death part

Quoted from Ruth
1:16

Quoted from Ruth
1:17

thee and me." And it is on Society, rather than on the Stage, that we should lay the blame of the light use of such language, common in the last generation, when such phrases as "My God!" "Good Lord!" were constantly used as mere *badinage*, and when so refined a writer as Miss Austen could make a young lady say (in "Pride and Prejudice") "Lord, how ashamed I should be of not being married before three-and-twenty!" When quite common, such words possibly conveyed no meaning either to speaker or hearer: in these days they jar on the ear, for their strangeness forces us to realise their meaning. When Shakespeare wrote "Much Ado," Beatrice's "O God, that I were a man! I would eat his heart in the market-place," and Benedick's "O God, sir, here's a dish I love not; I cannot endure my lady Tongue," no doubt fell with equally innocent effect on the ear: but in our day, though the first may well be retained, as gravely said and on a worthy occasion, the second comes as a false note; and I think Mr. Irving, instead of toning it down into "O Lord!" would have done better by omitting it altogether.

The act of prayer is almost uniformly treated with reverence on the Stage. My experience furnishes only one instance to the contrary, where the heroine of a ballet, supposed to be in her chamber at night, and soon to be serenaded by her lover at the window, went through the horrid mockery of kneeling in semblance of prayer. But I see no objection to its introduction on the Stage, if reverently represented, as in the scene in "Hamlet," where Claudius is found praying: and I well remember the grand effect produced by Charles Kean (in "Henry V.," just before the battle of Agincourt), by kneeling, for a short passionate prayer, on the battle-field.

Places of worship, also, when made the subjects of stage representation, are usually treated with perfect propriety: one must turn to the orgies of the Salvation Army, or the ribaldry of the street preacher, to realise how far religion can be vulgarised, and with what loathsome familiarity the holiest themes can be insulted. We have lately been privileged to see an instance of exquisite taste and reverent handling in the church-scene in "Much Ado" at the Lyceum. Some objected, at the time, to any such scene being put on the Stage, yet probably none of its censors would condemn "sacred" pictures? And surely the distinction between a picture painted on canvas, and a picture formed by living figures on a stage is more fanciful than real? To me the solemn beauty of that scene suggested the hope that some might see it—some to whom the ideas of God, or heaven, or prayer, were strange—and might think "Is *this* what church is like? I'll go and see it for myself!" Yet *one* false note there certainly was to mar the beauty of that scene. The dialogue between Beatrice and Benedick, with all its delicate banter and refined comedy, spoken amid such surroundings, must have given pain to many to whom the special scene had been a pure delight. I heartily wish Mr. Irving could see his way to transfer it to the *outside* of the church. Surely a manager, who could endure an interpolation so utterly alien to the spirit of the scene as "Kiss my hand again!" can have no *very* strong feeling about keeping the text of Shakespeare inviolate!

As for ministers of religion, I would not seek to shield them from ridicule *when they deserve it*; but is it not sometimes too indiscriminate? Mr. Gilbert—to whom we owe a deep debt of gratitude for the pure and healthy fun he has given us in such comedies as "Patience"—seems to have a craze for making bishops and clergymen contemptible. Yet are they behind other professions in such things as earnestness, and hard work, and devotion of life to the call of

duty? That clever song, "The pale young curate", with its charming music, is to me simply painful. I seem to see him as he goes home at night, pale and worn with the day's work, perhaps sick with the pestilent atmosphere of a noisome garret where, at the risk of his life, he has been comforting a dying man—and is your sense of humour, my reader, so keen that you can *laugh* at that man? Then at least be consistent. Laugh also at that pale young doctor, whom you have summoned in such hot haste to your own dying child: ay, and laugh also at that pale young soldier, as he sinks on the trampled battle-field, and reddens the dust with his life-blood for the honour of Old England!

Quoted from *The Sorcerer* by W. S. Gilbert and Arthur Sullivan

Still, the other side of this picture is now and again given us on the Stage, and one could not desire a more gentle and lovable type of old age than the "Vicar of Wakefield," as played by Mr. Irving, or a more manly and chivalrous hero than the young clergyman in "The Golden Ladder," played by Mr. Wilson Barrett.

The comic treatment of such subjects as *evil spirits* must be regarded from a fresh stand-point. "What reverence," it might fairly be asked, "is due to the Devil, whether we believe that such a being exists or not?" My answer is, that *seriousness* at least is due in dealing with such subjects. The darkest deeds of lust or cruelty that have blasted human happiness have often seemed to the guilty wretch to be due to influences other than his own thoughts: but, even setting aside such evidence, the whole subject is too closely bound up with the deepest sorrows of life to be fit matter for jesting. Yet how often one hears in Society the ready laughter with which any sly allusion to the Devil is received—ay, even by clergymen themselves, who, if their whole life be not one continuous lie, do believe that such a being exists, and that his existence is one of the saddest facts of life.

In this respect I think the tone of the Stage not lower than—I doubt if it be so low as—that of Society. Such a picture as Irving gives us of "Mephistopheles" must surely have a healthy influence. Who can see it and not realise, with a vividness few preachers could rival, the utter *hatefulness* of sin?

The same claim, for seriousness of treatment, may be made as to the subjects of Hell and future punishment. In the last generation the Stage, in its constant light use of words, connected with "damnation," was simply following the lead of Society; and it is satisfactory to notice that the idle curses, no longer heard in respectable Society, are fast vanishing from the Stage. Let me mention one instance of false treatment of this subject on the Stage, and conclude with two of the better kind.

I have never seen Mr. Gilbert's clever play "Pinafore" performed by grown-up actors: as played by *children*, one passage in it was to me sad beyond words. It occurs when the captain utters the oath "Damn me!" and forthwith a bevy of sweet innocent-looking little girls sing, with bright, happy looks, the chorus "He said 'Damn me!' He said 'Damn me!'" I cannot find words to convey to the reader the pain I felt in seeing those dear children taught to utter such words to amuse ears grown callous to their ghastly meaning. Put the two ideas side by side—Hell (no matter whether *you* believe in it or not: millions do), and those pure young lips thus sporting with its horrors—and then find what *fun* in it you can! How Mr. Gilbert could have stooped to write, or Sir Arthur Sullivan could have prostituted his noble art to set to music, such vile trash, it passes my skill to understand.

But I am no such purist as to object to *all* such allusions: when gravely made, and for a worthy purpose, they are, I think, entirely healthy in their effect. When the hero of "The Golden Ladder," claimed as prisoner by a French officer, is taken under the protection of a British captain (finely played by Mr. Bernage), and the Frenchman's "He is my prison-erre!" is met by the choleric captain's stentorian reply, "Then, damn it, come on board my ship and take him!" the oath did not sound "irreverent" in any degree. Here was no empty *jesting*: all was grim earnest!

One more example, and I have done. No dramatic version of "David Copperfield" would do justice to the story if it failed to give the scene after Steerforth has eloped with "little Em'ly", leaving her betrothed, Ham Peggotty, a broken-hearted man. Ham has brought the news to his father, and David is present.

"Mas'r Davy," implored Ham, "go out a bit, and let me tell him what I must. You doen't ought to hear it, sir."

"I want to know his name!" I heard said, once more.

"For some time past," Ham faltered, "there's been a servant about here at odd times. There's been a gen'lm'n, too. . . . A strange chay and horses was outside town this monhing. . . . When the servant went to it, Em'ly was nigh him. The t'other was inside. He's the man."

"For the Lord's love," said Mr. Peggotty, falling back, and putting out his hand, as if to keep off what he dreaded, "doen't tell me his name's Steerforth!"

"Mas'r Davy," exclaimed Ham, in a broken voice, "it ain't no fault of yourn—and I am far from laying of it to you—but his name is Steerforth, and he's a damned villain!"

The critic who would exclaim, on witnessing such a scene, "Shocking irreverence! That oath ought to be cut out!", attaches a meaning to the word "irreverence" with which I have no sympathy.

May I conclude with an allusion to the distinctly dramatic tone of much of the language of the Bible? In doing so I make no special appeal to Christians: any one, who possesses any literary taste at all, will admit that, for poetry and simple pathos, it stands high in the literature of the world. Much of the vivid force of the parables depends on their dramatic character: one fancies, in reading the parable of the "Sower", that the recital was illustrated by the actual events of the moment: one pictures a neighbouring hill-side, with its sharp skyline, along which slowly moves a figure, seen clear and black against the bright sky, and giving, by the regular swing of his arm, a sort of rhythmic cadence to the words of the speaker.

Whether the parable of "The Prodigal Son" has ever served as the basis of a drama I know not: the general idea has no doubt been so used again and again: but the story, as it stands, simply translated into modern life, would make a most effective play.

The First Act, with the splendour of the wealthy home, would be in picturesque contrast with the Second, where we should find the spendthrift in gaudy and ostentatious vulgarity, surrounded by unmanly men and unwomanly women, wasting his substance in the "far country." The Third might depict his downward career, ending in a deep despair—then the revulsion of feeling—then the pathetic words "I will arise, and go to my Father!" And when the Fourth Act took us back to the ancestral halls, and showed us the wretched outcast, pausing irresolute at the door, mocked by a troop of listless menials, who would fain drive the beggar back to starvation and death, and the old father rushing

Quoted from Luke
15:18

forth to clasp the wanderer to his breast—might not some eyes, even among the
rougns of the Gallery, be “wet with most delicious tears”, and some hearts be
filled with new and noble thoughts, and a spirit of “reverence” be aroused, for
“whatsoever things are just, whatsoever things are pure, whatsoever things are
lovely,” which would not lightly pass away?

14.7 Mrs. Fawcett and the Stage Children

Source: The St. James's Gazette, July 20, 1889

Parody on an earlier letter to the editor

To the EDITOR *of the* ST. JAMES'S GAZETTE

SIR,—Most reluctantly do I seek to trespass on your space with another personal matter. Some remarks of mine, relative to the well-known Mr. John Smith, have probably attracted your notice, having been widely repeated in the best circles. These were to the effect that he has committed several burglaries and forged two cheques for large amounts. Similar publicity has, unfortunately, been given to Mr. William Brown's assertion that my statements "were fabrications."

May I be allowed to say, once for all, that, some months ago, when Mr. Brown made a similar charge against me, I challenged him to produce any one statement which I have ever made about Mr. John Smith, and prove it to be false.

To this challenge he made no reply, except to mutter some wretched Latin jargon about "onus probandi." I leave the public to judge where the fabrication lies.—I am, Sir, your obedient servant,

Lewis Carroll.

14.8 Stage Children

Source: The Sunday Times, August 4, 1889 (also reprinted in *The Theatre*, September 1889)

SIR,—I am neither a stage manager nor a dramatic author; I have no children of my own on the stage, or anywhere else; and I have no pecuniary interest in anything theatrical. But I have had abundant opportunities, for many years, for studying the natures of children, including many stage children, and have enjoyed the friendship of many dear children, both on and off the stage.

To these reasons for writing I may, perhaps, be allowed to add that I have given some attention to logic and mathematics, which help so largely in the *orderly* arrangement of topics of controversy—an art much needed when so many controversialists are ladies. Long experience of that delightful sex has taught me that their system of arrangement is that of a circulating decimal, that with them analogy is identity, and reiteration proof, and that they always lay the *onus probandi* on their opponents. A beautiful instance of this occurred in a newspaper letter on this very controversy a few days ago (I forget the signature, but it was surely a lady's writing). She stated that the Americans are stricter in this matter than the British, and asked, "Why should not we do as the Americans do?" forgetting that it might be asked, with exactly the same logical force, "Why should not the Americans do as we do?"

My contention is:—

I. That the employment, in theatres, of children under ten is *not* harmful.

II. That it *is* beneficial.

III. That, while this practice needs certain safeguards not yet provided by the law, it does *not* call for absolute prohibition.

(I.) The harm attributed to this practice may be classed under three headings—(1) physical; (2) intellectual; (3) moral.

(1) "Physical harm."—Take first the charge that it causes "excessive bodily fatigue." To this there was at first an additional item, "enforced by cruelty," which is now practically abandoned, it appearing, on investigation, that no evidence in support of it was forthcoming, while abundant evidence was produced of the kindness such children met with in theatres, and of their thorough enjoyment of their work. According to my experience, the work is well within healthy limits, and the children enjoy it with an intensity difficult to convey by mere words. They like it better than any game ever invented for them. Watch any children you know, in any rank of life, when thrown on their own resources for amusement, and, if they do not speedily extemporise a little drama, all I can say is that they are not normal children, and they had better see a doctor.

Take next such charges as "late hours, impure air, draughts, exposure to night air," &c. The good people who raise these cries seem to think that the homes of these little ones are perfect models of regular habits and good sanitary arrangements, and that such a sight as a child outside its house after 9 p. m. would thrill the neighbourhood with horror! Let them visit a few London alleys, and judge for themselves.

(2) "Intellectual harm."—This is asserted to exist in two forms, "excess of dramatic study," and "defect of other studies." A lady writer lately drew a sensational parallel between the little Josef Hoffmann, who was so nearly killed by being encouraged to give constant public exhibitions of his precocious musical

talent, and the ordinary stage child. It was not a fair parallel; in fact no really parallel case on the stage has yet been produced (the pathetic death of the tiny Midshipmite in "Patience" was due to causes quite unconnected with stage work); and I have myself known intimately stage children who have played the heaviest child parts on record without receiving the slightest harm.

As to defect of other studies, if we contemplate the weary man of useless knowledge which, in the present craze for teaching everybody everything, so many little minds are compelled, not to *digest*, for that is impossible, but merely to swallow, we may well hope that the stage child is all the better for escaping much of this. Frequent mental collapse among Board school children and pupil teachers is slowly teaching us the valuable psychological fact that a child's mind is *not* a sausage; but we have not quite learned our lesson yet!

(3) "Moral harm."—As this danger exists in every phase of human life, those who plead it in this controversy are bound to show that it is *greater* for children under ten than for older actors and actresses; otherwise they commit the fallacy of "proving to much."

Take first "immorality, whether of general tone or particular passage, in the play itself." Ignorance of the ways of the world, and of the meanings of most of the words they hear, is a protection enjoyed by young children, and by them only. The evil itself is undeniably great—though less, I believe, in this age than in any previous one—but it is almost wholly limited to the adult members of the company and of the audience.

Take next "the encouragement of vanity, love of dress," &c. Here, again, the danger is distinctly greater in the case of adults. Children are too deeply absorbed in attending to their stage "business," and in observing the discipline enforced in all well-conducted theatres, to have much opportunity for self-consciousness.

Take, lastly, the gravest and most real of all the dangers that come under the category of "moral harm," viz., "the society of profligate men" For adult actresses this danger is, I believe, in well-conducted theatres, distinctly less than it would be in most of the lines of life open to them. Here again the good people, who see such peril in the life of an actress, seem to be living in a fool's paradise, and to fancy they are legislating for young ladies who, if they did not go on the stage, would be secluded in drawing-rooms where none but respectable guests are admitted. Do they suppose that attractive-looking young women, in the class from which the stage is chiefly recruited, would be safer as barmaids or shopwomen from the insidious attentions of the wealthy voluptuary than they are as actresses?

But if it be granted that young women of this class may choose a stage life with as fair a chance of living a reputable life as they would have in any other profession open to them, it is surely desirable to begin learning their business as soon as they are competent, unless it can be shown that they are in greater danger as children than as young women. I believe the danger is distinctly less. Their extreme youth is a powerful safeguard. To plot evil against a child, in all its innocence and sweet trustfulness and ignorance of the world, needs no common voluptuary; it needs one so selfish, so pitiless, and so abject a coward as to be beneath one calling himself a man.

II. My second contention is that stage life is beneficial to children, even the youngest; and this in three ways—(1) physically, (2) intellectually, and (3) morally.

(1) Physically. The deportment that must be acquired for even moderately good acting, and the art of dancing, which most stage children acquire, not only give grace of figure and of action, but are excellent for the health. In girls' schools, not so many years ago, spinal curvature was so common that an eminent surgeon, Dr. Mayo, put it on record that scarcely three per cent. escaped it. I am glad to believe that they are more sensibly managed now, and that the days are passed away when it was "vulgar" for young ladies to run, and where the only bodily exercise allowed them was to walk two-and-two; but I feel sure that, even now, if one hundred children were taken at random from the highly educated classes, and another hundred from the stage, the latter would show a better average for straightness of spine, strength, activity, and the bright, happy look that tells of health. The stage child "feels its life in every limb"—a locality where the Board school child only feels its lessons.

Quoted from *We Are Seven* by William Wordsworth

(2) Intellectually. Comparing children with children, my belief is that stage life distinctly *brightens* the mind of a child. Of course the same result is produced at schools, whenever they can manage to *interest* the pupils in their work. But how often they fail to do this! How often are the poor little victims made to do work "against the grain"! And all such work is not only badly done, but is intensely fatiguing and depressing to spirits and intellect alike.

(3) Morally. I believe that stage life, in a well-conducted theatre, is valuable moral training for young children. They learn—

(a) Submission to discipline.

(b) Habits of order and punctuality.

(c) Unselfishness (this on the principle on which you always find children in large families less selfish than only children).

(d) Humility. This because, however clever they may think themselves, they soon find that others are cleverer.

III. My third contention is that, though it is desirable to provide, by law, certain safeguards for the employment of children in theatres, there is no need for its absolute prohibition.

The legislation that seems to me desirable would take some such form as this:—

That every child under sixteen (ten is too low a limit), employed in a theatre, should hold a licence, annually renewable.

That such licence should only be granted on condition of the child having passed the examination for a certain "standard," adapted to the age of the child.

That a limit should be fixed for the number of weeks in the year that the child may be engaged, and for the number of hours in the day that he or she may be at the theatre. (This rule to be relaxed during rehearsals.)

That, during a theatrical engagement, the child shall attend a specified number of hours, during the afternoons, at some school; at other times in the year during the usual hours, if attending a Board school. (High schools would probably adopt the same principle, and allow half-day attendance during engagements.)

That some guarantee be required that girls under sixteen are provided with sufficient escort to and from a theatre.

But I do not believe that the law can absolutely prohibit children under ten from acting in theatres without doing a cruel wrong to many a poor struggling family, to whom the child's stage salary is a godsend, and making many poor

children miserable by debarring them from a healthy and innocent occupation
which they dearly love.

Faithfully yours,

Lewis Carroll.

Texts about Letters, Post, etc.

15.1 The Telegraph-Cipher

Source: printed 1868

Directions for Use

Cut this card in two along the line.

In order to send messages in this cipher, a key-word (or sentence) must be agreed on between the correspondents: this should be carried in the memory only.

To translate a message into cipher, write the key-word, letter for letter, over the message, repeating it as often as may be necessary: slide the message-alphabet along under the other, so as to bring the first letter of the message under the first letter of the key-word, and copy the letter that stands over 'a': then do the same with the second letter of the message and second letter of the key-word, and so on.

Translate the cipher back into English by the same process. [T. O.]

For example, if the key-word be 'war,' and the message 'meet me at six,' we write it thus:—

$$\left\{ \begin{array}{cccccccc} w & a & r & w & a & r & w & a & r & w & a \\ m & e & e & t & m & e & a & t & s & i & x \\ k & w & n & d & o & n & w & h & z & o & d \end{array} \right\}$$

The cipher sent, 'kwndonwhzod,' may be re-translated by the same process.

An explanation of the method of using the above table for sending Messages will be found on the other side.

Explanation

Each column of this table forms a dictionary of symbols representing the alphabet: thus, in the A column, the symbol is the same as the letter represented; in the B column, A is represented by B, B by C, and so on.

To use the table, some word or sentence should be agreed on by two correspondents. This may be called the “key-word,” or “key-sentence,” and should be carried in the memory only.

In sending a message, write the key-word over it, letter for letter, repeating it as often as may be necessary: the letters of the key-word will indicate which column is to be used in translating each letter of the message, the symbols for which should be written underneath: then copy out the symbols only, and destroy the first paper. It will now be impossible for any one, ignorant of the key-word, to decipher the message, even with the help of the table.

For example, let the key-word be *vigilance*, and the message “meet me on Tuesday evening at seven,” the first paper will read as follows:—

v i g i l a n c e v i g i l a n c e v i g i l a n c e v i
m e e t m e o n t u e s d a y e v e n i n g a t s e v e n
h m k b x e b p x p m y l l y r x i i q t o l t f g z z v

the second will contain only "h m k b x e b p x p m y l l y r x i i q t o l t f g z z v."

The receiver of the message can, by the same process, retranslate it into English.

N.B. If this table be lost, it can easily be written out from memory, by observing that the first symbol in each column is the same as the letter naming the column, and that they are continued downwards in alphabetical order. Of course it would only be necessary to write out the particular columns required by the key-word: such a paper, however, should not be preserved, as it would afford means for discovering the key-word.

15.3 Letter from Mabel

Source: cyclostyled 1880

*Edinborough,
February 14*

My dear Emily,

Last Saterdag was my birthday. I wish it was your's too: then we'd be the same ages. A pedlar came to the door. He said he was a cobbler and soled doll's shoes. I was rather frightened of him for there was only Aunt and me in the house, as the maid don't sleep here. Aunt bought a pair of shoes for my doll. Wasn't she aimiable? I was in an extasy. I wish you'd come and see her and I, like you did last year.

Your loveing Mabel

15.4 A Complete Postage Guide

Source: The Times, September 1, 1883; also probably published separately

To the Editor of the Times

Sir,—As the scales of charges for postage are not supplied at post-offices in any cheaper form than the sixpenny “Postal Guide,” and as all tables for reference are liable to be mislaid, your readers will perhaps find the following rules useful.

*I am, Sir, your obedient servant,
Charles L. Dodgson.
Christ Church, Oxford.*

Rules for Reckoning Postage

Book Post.—Find the number of ounces. Take the first even number not less than this and halve it. This gives the cost in half-pence.

Letter Post.—A letter not over 1oz. costs 1d. Otherwise use last rule and add 1d.

Parcel Post.—Find the number of pounds and add one. Take the first even number not less than this and halve it. This gives the cost in threepenny-pieces.

N.B.—A book must not be over 5lb. nor a parcel over 7lb. A letter over 12oz. is charged 1d. an ounce, beginning with the first ounce.

Examples.—For a book of $5\frac{1}{2}$ oz., say “ $5\frac{1}{2}$, 6, 3 half-pence.” For a letter of $5\frac{1}{2}$ oz., say “ $5\frac{1}{2}$, 6, 3 half-pence; and a penny makes $2\frac{1}{2}$ d.” For a parcel of $5\frac{1}{2}$ lb., say “ $5\frac{1}{2}$, $6\frac{1}{2}$, 8, 4 threepenny-pieces make 1s.”

15.5 What to Call a “Telephone-Message”

Source: St. James’s Gazette, January 17, 1889

To the EDITOR *of the* ST. JAMES’S GAZETTE

SIR,—Why spend time in discussing the twenty-two rival words proposed, while the simple and obvious word “teltale” is—so to speak—staring one in the face?—
I am, Sir, your obedient servant,

Lewis Carroll.
January 16.

15.6 Eight or Nine Wise Words About Letter-Writing

Source: Eight or Nine Wise Words About Letter-Writing, first edition (with differences as noted), and fifth edition

The title is quoted from *Much Ado About Nothing* by William Shakespeare.

§ 1. On Stamp-Cases

Some American writer has said “the snakes in this district may be divided into one species—the venomous.” The same principle applies here. Postage-Stamp-Cases may be divided into one species, the “Wonderland.” [The title is entered at Stationers’ Hall: the two Pictorial Surprises, and the ‘Wise Words,’ are copyright.]¹

You don’t see why I call them ‘Surprises’? Well, take the Case in your left-hand, and regard it attentively. You see Alice nursing the Duchess’s Baby? (An entirely new combination, by the way: it doesn’t occur in the book.) Now, with your right thumb and forefinger, lay hold of the little book, and suddenly pull it out. *The Baby has turned into a Pig!* If *that* doesn’t surprise you, why, I suppose you wouldn’t be surprised if your own Mother-in-law suddenly turned into a Gyroscope!

This Case is *not* intended to carry about in your pocket. Far from it. People seldom want any other Stamps, on an emergency, than Penny-Stamps for Letters, Sixpenny-Stamps for Telegrams, and a bit of Stamp-edging for cut fingers (it makes capital sticking-plaster, and will stand three or four washings, cautiously conducted): and all these are easily carried in a purse or pocket-book. No, *this* is meant to haunt your envelope-case, or wherever you keep your writing-materials. What made me invent it was the constantly wanting Stamps of other values, for foreign Letters, Parcel Post, &c., and finding it very bothersome to get at the kind I wanted in a hurry. Since I have possessed a “Wonderland Stamp Case”, Life has been bright and peaceful, and I have used no other. I believe the Queen’s laundress uses no other.

Each of the pockets will hold 6 stamps, comfortably. I would recommend you to put them in, one by one, in the form of a *bouquet*² making them lean to the right and to the left alternately: thus there will always be a free *corner* to get hold of, so as to take them out, quickly and easily, one by one: otherwise you will find them apt to come out two or three at a time.

According to *my* experience, the 5*d.*, 9*d.*, and 1*s.* Stamps are hardly ever wanted, though I have constantly to replenish all the other pockets. If your experience agrees with mine, you may find it convenient to keep only a couple (say) of each of these 3 kinds, in the 1*s.* pocket, and to fill the other 2 pockets with extra 1*d.* stamps.

¹Imitations of it will soon appear, no doubt: but they cannot include the two Pictorial Surprises, which are copyright.

²I would recommend you to arrange the 6, before putting them in, something like a *bouquet*,

§ 2. How to begin a Letter

If the Letter is to be in answer to another, begin by getting out that other letter and reading it through, in order to refresh your memory, as to what it is you have to answer, and as to your correspondent's *present address* (otherwise you will be sending your letter to his regular address in *London*, though he has been careful in writing to give you his *Torquay* address in full).

Next, Address and Stamp the Envelope. "What! Before writing the *Letter*?" Most certainly. And I'll tell you what will happen if you don't. You will go on writing till the last moment, and, just in the middle of the last sentence, you will become aware that 'time's up!' Then comes the hurried wind-up—the wildly-scrawled signature—the hastily-fastened envelope, which comes open in the post—the address, a mere hieroglyphic—the horrible discovery that you've forgotten to replenish your Stamp-Case—the frantic appeal, to every one in the house, to lend you a Stamp—the headlong rush to the Post Office, arriving, hot and gasping, just after the box has closed—and finally, a week afterwards, the return of the Letter, from the Dead-Letter Office, marked "address illegible!"

Do not, however, in your anxiety to observe this rule, commit the error of *addressing two Envelopes at once!* The inevitable result of *that* would be that the Letters would get into wrong Envelopes, and if (as is most probable) one was a Letter of congratulation, and the other of condolence, the out-come of your morning's work would be to turn two of your best and oldest friends into *bitter enemies for life! Verb. sap. sat.*³

Next, put your own address, *in full*, at the top of the note-sheet. It is an aggravating thing—I speak from bitter experience—when a friend, staying at some new address, heads his letter "Dover," simply, assuming that you can get the rest of the address from his previous letter, which *of course*⁴ you have destroyed.

Next, put the date *in full*. It is another aggravating thing, when you wish, years afterwards, to arrange a series of letters, to find them dated "Feb. 17", "Aug. 2", without any year to guide you as to which comes first. And never, never, dear Madam (N.B. this remark is addressed to ladies *only*: no *man* would ever do such a thing), put "Wednesday", simply, as the date!

"That way madness lies."

Quoted from *King Lear* by William Shakespeare

§ 3. How to go on with a Letter

Here is a golden Rule to begin with. *Write legibly.* The average temper of the human race would be perceptibly sweetened, if everybody obeyed this Rule! A great deal of the bad writing in the world comes simply from writing *too quickly*. Of course you reply, "I do it to save *time*". A very good object, no doubt: but what right have you to do it at your friend's expense? Isn't *his* time as valuable as yours? Years ago, I used to receive letters from a friend—and very interesting letters too—written in one of the most atrocious hands ever invented. It generally took me about a *week* to read one of his letters! I used to carry it about in my pocket, and take it out at leisure times, to puzzle over the riddles which composed it—holding it in different positions, and at different distances, till at last the meaning of some hopeless scrawl would flash upon me,

³missing in first edition

⁴perhaps

when I at once wrote down the English under it; and, when several had been thus guessed, the context would help with the others, till at last the whole series of hieroglyphics was deciphered. If *all* one's friends wrote like that, Life would be entirely spent in reading their letters!

This Rule applies, specially, to names of people or places—and *most* specially to *foreign names*. I got a letter once, containing some Russian names, written in the same hasty scramble in which people often write “yours sincerely”. The *context*, of course, didn't help in the least: and one spelling was just as likely as another, so far as *I* knew: it was necessary to write and tell my friend that I couldn't read any of them!

My second Rule is, don't fill *more* than a page and a half with apologies for not having written sooner!

The best subject, to *begin* with, is your friend's last letter. Write with the letter open before you. Answer his questions, and make any remarks his letter suggests. *Then* go on to what you want to say yourself. This arrangement is more courteous, and pleasanter for the reader, than to fill the letter with your own invaluable remarks, and then hastily answer your friend's questions in a postscript. Your friend is much more likely to enjoy your wit, *after* his own anxiety for information has been satisfied.

In referring to anything your friend has said in his letter, it is best to *quote the exact words*, and not to give a summary of them in *your* words. ⊥You know, yourself, how aggravating it is to have ‘words put into your mouth’—so to speak—which you have neither said nor meant to say.⁵

⊥This caution⁶ is specially necessary when some point has arisen as to which the two correspondents do not quite agree. There ought to be no opening for such writing as ⊥“You have quite misunderstood my letter. I never said so-and-so, &c. &c.”,⁷ which tends to make a correspondence last for a lifetime.

A few more Rules may fitly be given here, for correspondence that has unfortunately become *controversial*.

One is, *don't repeat yourself*. When once you have said your say, fully and clearly, on a certain point, and have failed to convince your friend, *drop that subject*: to repeat your arguments, all over again, will simply lead to his doing the same; and so you will go on, like a Circulating Decimal. *Did you ever know a Circulating Decimal come to an end?*

Another Rule is, when you have written a letter that you feel may possibly irritate your friend, however necessary you may have felt it to so express yourself, *put it aside till the next day*. Then read it over again, and fancy it addressed to yourself. This will often lead to your writing it all over again, taking out a lot of the vinegar and pepper, and putting in honey instead, and thus making a *much* more palatable dish of it! If, when you have done your best to write inoffensively, you still feel that it will probably lead to further controversy, *keep a copy of it*. There is very little use, months afterwards, in pleading “I am almost sure I never expressed myself as you say: to the best of my recollection I said so-and-so”. *Far* better to be able to write “I did *not* express myself so: these are the words I used.”

⁵A's impression, of what *B* has said, expressed in *A*'s words, will never convey to *B* the meaning of his own words.

⁶This

⁷You are quite mistaken in thinking I said so-and-so. It was not in the least my meaning, &c., &c.

My fifth Rule is, if your friend makes a severe remark, either leave it unnoticed, or make your reply distinctly *less* severe: and if he makes a friendly remark, tending towards 'making up' the little difference that has arisen between you, let your reply be distinctly *more* friendly. If, in picking a quarrel, each party declined to go more than *three-eighths* of the way, and if, in making friends, each was ready to go *five-eighths* of the way—why, there would be more reconciliations than quarrels! Which is like the Irishman's remonstrance to his gad-about daughter—"Shure, you're *always* goin' out! You go out *three* times, for *wanst* that you come in!"

My sixth Rule (and my last remark about controversial correspondence) is, *don't try to have the last word!* How many a controversy would be nipped in the bud, if each was anxious to let the *other* have the last word! Never mind how telling a rejoinder you leave unuttered: never mind your friend's supposing that you are silent from lack of anything to say: let the thing drop, as soon as it is possible without discourtesy: remember 'speech is silver, but silence is golden'! (N.B.—If you are a gentleman, and your friend is a lady, this Rule is superfluous: *you wo'n't get the last word!*)

My seventh Rule is, if it should ever occur to you to write, jestingly, in *dispraise* of your friend, be sure you exaggerate enough to make the jesting *obvious*: a word spoken in *jest*, but taken as *earnest*, may lead to very serious consequences. I have known it to lead to the breaking-off of a friendship. Suppose, for instance, you wish to remind your friend of a sovereign you have lent him, which he has forgotten to repay—you might quite *mean* the words "I mention it, as you seem to have a conveniently bad memory for debts", in jest: yet there would be nothing to wonder at if he took offence at that way of putting it. But, suppose you wrote "Long observation of your career, as a pickpocket⁸, has convinced me that my one only⁹ hope, for recovering that sovereign I lent you, is to say 'Pay up, or I'll summons yer!'" he would indeed be a matter-of-fact friend if he took *that* as seriously meant!

My eighth Rule. When you say, in your letter, "I enclose £5 bank-note¹⁰," or "I enclose John's letter for you to see", get¹¹ the document referred to—and *put it into the envelope*. Otherwise, you are pretty certain to find it lying about, *after the Post has gone!*

My ninth Rule. When you get to the end of a note-sheet, and find you have more to say, take another piece of paper—a whole sheet, or a scrap, as the case may demand: but whatever you do, *don't cross!* Remember the old proverb '*Cross-writing makes cross reading*'. "The *old* proverb?" you say, enquiringly. "*How old?*" Well, not so *very* ancient, I must confess. In fact, I'm afraid I invented it while writing this paragraph! Still, you know, 'old' is a *comparative* term. I think you would be *quite* justified in addressing a chicken, just of the shell, as "Old boy!", *when compared* with another chicken, that was only half-out!

If¹² doubtful whether to end with 'yours faithfully', or 'yours truly', or 'your most truly', &c. (there are at least a dozen varieties, before you reach

⁸pickpocket and a burglar

⁹lingering

¹⁰cheque for £5

¹¹leave off writing for a moment—go and get

¹²In the first edition preceded by the headline "§ 4. How to end a Letter", the next is § 5 instead of § 4.

‘yours affectionately’), refer to your correspondent’s last letter, and make your winding-up *at least as friendly as his*: in fact, even if a shade *more* friendly, it will do no harm!

A Postscript is a very useful invention: but it is *not* meant (as so many ladies suppose) to contain the real *gist* of the letter: it serves rather to throw into the shade any little matter we do *not* wish to make a fuss about. For example, your friend had promised to execute a commission for you in town, but forgot it, thereby putting you to great inconvenience: and he now writes to apologize for his negligence. It would be cruel, and needlessly crushing, to make it the main subject of your reply. How much more gracefully it comes in thus! “P.S. Don’t distress yourself any more about having omitted that little matter in town. I wo’n’t deny that it *did* put my plans out a little, at the time: but it’s all right now. I often forget things, myself: and ‘those, who live in glass-houses, mustn’t throw stones’, you know!”

My tenth Rule. When your letter is finished, read it carefully through, and put in any ‘not’ that you may chance to have omitted. (This precaution will sometimes save you from saying what you had not quite intended: *e. g.*, suppose you had *meant* to write “Dear Sir, I am not prepared to accept the offer you make me of your hand and heart.”) Then fold up the letter with all the enclosures *in* it, so that all must come out *together*. Otherwise your friend will simply draw out the letter, and put the envelope into the fire, and it will only be when he reaches the words “I enclose £5 bank-note” that he will turn to watch, with tearful gaze, a fragment of white paper-ash, as it flickers up the chimney!¹³

My eleventh Rule. Do not fasten up the envelope till Post-time is close at hand. Otherwise, you will have to tear it open again, to insert something you had forgotten to say.¹⁴

My last Rule.¹⁵ When you take your letters to the Post, *carry them in your hand*. If you put them *into*¹⁶ your pocket you will take a long country-walk (I speak from experience), passing the Post-Office *twice*, going and returning, and, when you get *home*¹⁷, will find them *still* in your pocket.

§ 4. On registering Correspondence

Let me recommend you to keep a record of Letters Received and Sent. I have kept one for many years, and have found it of the greatest possible service, in many ways: it secures my *answering* Letters, however long they have to wait; it enables me to refer, for my own guidance, to the details of previous correspondence, though the actual Letters may have been destroyed long ago; and, most valuable feature of all, if any difficulty arises, years afterwards, in connection with a half-forgotten correspondence, it enables me to say, with confidence, “I did *not* tell you that he was ‘an *invaluable* servant in *every* way’, and that you *couldn’t* ‘trust him too much’. I have a *précis* of my letter. What I said was ‘he is a *valuable* servant in *many* ways, but *don’t* trust him too much’. So, if he’s cheated you, you really must not hold *me* responsible for it!”

I will now give you a few simple Rules for making, and keeping a Letter-Register.

Get a blank book, containing (say) 200 leaves, about 4 in.¹⁸ wide and 7 high. It should be *well* fastened into its cover, as it will have to be opened and shut hundreds of times. Have a line ruled, in red ink, down each margin of every page, an inch off the edge (the margin should be wide enough to contain a number of 5 digits, easily: *I* manage with a $\frac{3}{4}$ inch margin: but, unless you write very small you will find an inch margin¹⁹ more comfortable).

Write a *précis* of each Letter, received or sent, in chronological order. Let the entry of a 'received' Letter reach from the left-hand edge to the right-hand marginal line; and the entry of a 'sent' Letter from the left-hand marginal line to the right-hand edge. Thus the two kinds will be quite distinct, and you can easily hunt through the 'received' Letters by themselves, without being bothered with the 'sent' Letters; and *vice versâ*.

Use the *right-hand* pages only: and, when you come to the end of the book, turn it upside-down, and begin at the other end, still using right-hand pages.²⁰

Write, at the top of every sheet of a 'received' Letter, and of every copy you keep of a 'sent' Letter, its Register-Number in full.²¹

I will now give a few (ideal) specimen pages of my Letter-Register, and make a few remarks on them: after which I think you will find it easy enough to manage one for yourself.

¹⁸inches

¹⁹inch

²⁰Additional sentence in first edition: You will find this much more comfortable than using left-handed pages.

²¹You will find it convenient to write, at the top of every sheet of a 'received' Letter, its Register-Number in full.

I begin each page by putting, at the top left-hand corner, the next entry-number I am going to use, *in full* (the last 3 digits of each entry-number are enough afterwards); and I put the date of the year, at the top, in the centre.

I begin each entry with the last 3 digits of the entry-number, enclosed in an oval (this is difficult to reproduce in print, so I have put round-parentheses here). Then, for the *first* entry in each page, I put the day of the month and the

day of the week: afterwards, 'do.' is enough for the month-day, till it changes: I do not repeat the week-day.

Next, if the entry is *not* a letter, I put a symbol for 'parcel' (see Nos. 243, 245) or 'telegram' (see Nos. 230, 231) as the case may be.

Next, the name of the person, underlined (indicated here by italics).

If an entry needs special further attention, I put [] at the end: and, when it has been attended to, I fill in the appropriate symbol, e. g. in No. 218, it showed that the bill had to be *paid*; in No. 222, that an answer was really *needed* (the 'x' means 'attended to'); in No. 234, that I owed the old lady a visit; in No. 235, that the item had to be entered in my account book; in No. 236, that I must not forget to write; in No. 239, that the address had to be entered in my address-book; in No. 245, that the book had to be returned.

I give each entry the space of 2 lines, whether it fills them or not, in order to have room, in the margin, for a head-reference and a foot-reference.²² And, at the foot of each page I leave 2 or 3 lines *blank* (often *useful*²³ for entering omitted Letters) and I miss²⁴ one or 2 numbers before I begin the next page.

At any odd moments of leisure, I 'make up' the entry-book, in various ways, as follows:—

(1) I draw a *second* line, at the right-hand end of the 'received' entries, and at the left-hand end of the 'sent' entries. This I usually do pretty well 'up to date'. In my Register the first line is *red*, the second *blue*: here I distinguish them by making the first thin, and the second *thick*.

(2) Beginning with the last entry, and going backwards, I read over the names till I recognise²⁵ one as having occurred already: I then link the two entries together, by giving the one, that comes first in chronological order, a *foot-reference*, and the other a *head-reference*. When the two entries belong to the same *thousand*, I use only the last 3 digits of their reference-numbers (see Nos. 221, 246): otherwise, I write the number in full (see head-reference of No. 217).²⁶ I do not keep this 'up-to-date', but leave it till there are 4 or 5 pages to be done. I work back till I come among entries that are all supplied with 'foot-references', when I once more glance through the last few pages, to see if there are any entries not yet supplied with head-references: *their* predecessors may need a special search. If an entry is connected, in subject, with another under a different name, I link them by cross-references, distinguished from the head- and foot-references by being written *further from the marginal line* (see No. 229). When 2 consecutive entries have the same name, and are both of the same kind (i. e. both 'received' or both 'sent') I bracket them (see Nos. 242, 243); if of different kinds, I link them with the symbol used for Nos. 219, 220.

(3) Beginning at the earliest entry not yet done with, and going forwards, I cross out every entry that has got a head- and foot-reference, and is done with, by continuing the extra line *through* it (see Nos. 221, 223, 225). I also cross out every entry that is done with, even if it have no head-reference, provided it is the *first of its kind*, so that no head-reference is possible: also every is done with, even if it have no foot-reference, provided it is likely to be the *last of its kind*; but in this case it is convenient, in order to find it again if the

²²room for references

²³useful afterwards

²⁴miss

²⁵recognize

²⁶'foot-reference' (see Nos. 217, 225)

correspondence should ever re-commence, to enter it in an alphabetical index of 'Closed Correspondences'.²⁷ The result of this system of crossing-out is that²⁸ wherever a *break* occurs in this extra line, it shows there is some matter still needing attention. I do not keep this anything like 'up to date', but leave it till there are 30 or 40 pages to look through at a time. When the first page in the volume is thus completely crossed out, I put a mark at the foot of the page to indicate this; and so with pages 2, 3, &c. hence, whenever I do this part of the 'making up', I need not begin at the beginning of the volume, but only at the *earliest page that has not got this mark*.

All this looks very complicated, when stated at full length: but you will find it perfectly simple, when you have had a little practice, and will come to regard the 'making-up' as a pleasant occupation for a rainy day, or at any time that you feel disinclined for more severe mental work. In the Game of Whist, Hoyle gives us one golden Rule, "When in doubt, win the trick"—I find that Rule admirable for²⁹ real life: when in doubt what to do, I 'make-up' my Letter-Register!

15.7 A Postal Problem. June, 1891

Source: printed 1891

The Rule, for Commissions chargeable on overdue Postal Orders, is given in the "Post Office Guide," in these words, (it is here divided, for convenience of reference, into 3 clauses):—

"(a) After the expiration of 3 months from the last day of the month of issue, a Postal Order will be payable only on payment of a Commission, equal to the amount of the original poundage

"(b) with the addition (if more than 3 months have elapsed since the said expiration) of the amount of the original poundage for every further period of 3 months which has so elapsed

"(c) and for every portion of any such period of 3 months over and above every complete period.

You are requested to answer the following questions, in reference to a Postal Order for 10. (on which the 'original poundage' would be 1*d.*) issued during the month of January, so that the 1st 'period' would consist of the months February, March, April; the 2nd would consist of the months May, June, July; and the 3rd would consist of the months August, September, October.

(1) Supposing the Rule to consist of clause (a) only, on what day would a 'Commission' begin to be chargeable? []

(2) What would be its amount? []

(3) Supposing the Rule to consist of clauses (a) and (b), on what day would the lowest 'Commission' begin to be chargeable? []

(4) What would be its amount? []

(5) On what day would a larger 'Commission' (being the sum of 2 'Commissions') begin to be chargeable? []

(6) What would be its amount? []

(7) On what day would a yet larger 'Commission' begin to be chargeable? []

(8) What would be its amount? []

(9) Taking the Rule as consisting of all 3 clauses, in *which* of the above-named 3 'periods' does clause (c) first begin to take effect? []

(10) *Which* day, of any 'period,' is the earliest on which it can be said that a 'portion' of the 'period' has elapsed? []

(11) On what day would the lowest 'Commission' begin to be chargeable? []

(12) What would be its amount? []

(13) On what day would a larger 'Commission' begin to be chargeable? []

(14) What would be its amount? []

(15) On what day would a yet larger 'Commission' begin to be chargeable? []

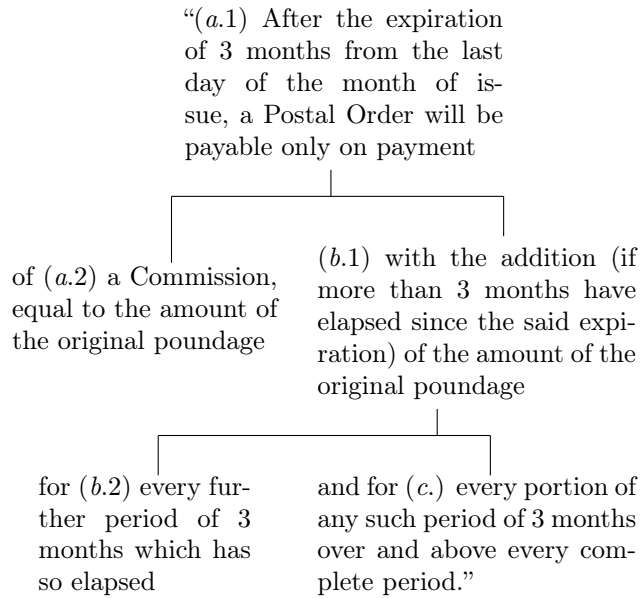

(16) What would be its amount? []

Date _____

Supplement

The Rule is given, below, in a form which exhibits its grammatical construction:—

15.8 A Postal Problem

Source: *The Lady*, December 17, 1891 (as part of the Syzygy column)

As the new Rules for Syzygies are not quite ready yet, I will give the competitors an altogether new kind of Problem.

In the "Post Office Guide" the following Rule is laid down as to certain charges to be made, in certain cases, on the presentation for payment of Postal Orders:—

"After the expiration of three months from the last day of the month of issue, a postal order will be payable only on payment of a commission equal to the amount of the original poundage, with the addition (if more than three months have elapsed since the said expiration) of the amount of the original poundage for every further period of three months which has so elapsed, and for every portion of any such period of three months over and above every complete period."

My Problem is as follows:—Assume that 360 Postal Orders, for 2s. each (so that the "poundage" on each would be 1d.), were purchased on the 6th of January, and that one is presented, for payment, every day till the end of the year. State the various amounts of commission chargeable, naming the first and last day on which each such amount would be charged.

Answers to this Problem should be written in the following form:—

7d. July 24 to Aug. 8.

8d. Aug. 9 to Oct. 20.

and so on;

And it is requested that they may reach the Editor by or before the first post on Dec. 24. They shall be scored in order of unanimity. Answers obtained from lawyers will be especially interesting. I have already been thus favoured by various judges, solicitors, &c., whose replies exhibit a pleasing variety and contrast. Of course, no real names need be given.

Part 16

Other Texts

16.1 Railway Rules

Source: manuscript written about 1847 (text might not be complete)

Station master must mind his station, and supply refreshments: he can put anyone who behaves badly to prison, while a train goes round the garden: he must ring for the passengers to take their seats, then count 20 slowly, then ring again for the train to start. The L one shall be a surgeon, the wounded must be brought there gratis by the next train going that way and cured gratis. There shall be a place at the L station for lost luggage. If there is anyone to go, a flag is to be hoisted.

Passengers may not go on the line on any pretence: parents responsible for their children: may not get in or out of the train when moving: the money is divided equally among all except drivers: the parents take their childrens': any one without money works at one of the stations.

16.2 “Love’s” Railway Guide

Source: manuscript written about 1847 (table hard to decipher)

Trains leave	I	II
Croft	immediatly after dinner	when the engine is rested
Liverpool	about 5 m after	durant stage
York	about 3 p. m.	4. 1 m p. m.
Manchester	3. 5 m p. m.	Train left behind as the engine &c. go to tea

Rule I. All passengers when upset are requested to lie still until picked up—as it is requisite that at least 3 trains should go over them, to entitle them to the attention of the doctor and assistants.

II. If a passenger comes up to a station after the train has passed the next (i. e. when it is about 100 m off) he may not run after it but must wait for the next.

III. When a passenger has no money and still wants to go by the train, he must stop at whatever station he happens to be at, and earn money—by making tea for the station master (who drinks it all hours of the day and night) and grinding sand for the company (what use they make of it they are *not* bound to explain).

16.3 Answers to Correspondents

Source: Rectory Magazine

Part 1

- M. B. F. Catherine may be spelt indifferently with a “C” or “K”.
- D. S. Your question is unintelligible. What do you mean by “with-some”?
- K. P. 235.
- C. S. K. “Boz” stands for Charles Dickens, “Phiz” for Hablot K. Browne¹.
- M. We do not know the way in which Indian rubber balls are made.
- E. F. We must refer you to Johnson’s Dictionary.
- S. V. We cannot inform you.
- A. B. “Cupboard” is pronounced “cubberd.”

Part 2

- A. S. “F. M.” stands for Field Marshal.
- E. L. K. Whatever you please, my little dear, you pays your money, and you takes your choice.
- N. C. No.
- E. B. M. Yes.
- J. P. Ca’n’t say.

Part 3

- F. F. What a stupid you are!
- L. B. York Minster has been burnt 3 times, the last time by a madman.
- M. N. We should *rather* think not.
- S. What tiber will roof us? (Wat Tyler. Will Rufus.)
- M. F. Chichester or Norfolk. We forget which.

Part 4

- F. Z. We cannot undertake to return rejected communications.
- L. F. D. Derived from “darling” and “town,” an expression of admiration.
- N. W. Contracted from “shelf funnier,” meaning that it is a funnier sort of shelf than any hitherto invented.
- D. D. 43 miles.
- R. N. We cannot answer you.

¹originally erroneously “George Cruikshank”

Part 5

- M. M. The gutta percha is mixed with treacle, we believe, or some such substance, to soften it.
- D. J. Do you mean,
 ‘An Austrian army awfully arrayed,
 ‘Boldly by battery besiege Belgrade &c.’?
- C. Z. We will try.
- M. B. We think not, at least as far as regards snails and turpentine.
- F. Julius Cæsar.
- B. C. Perhaps.

Quoted from *The Siege of Belgrade* by Alaric Alexander Watts

Part 6

- A. Q. Invert the divisor, and proceed as in multiplication.
- F. N. ‘Round the rugged rocks the ragged rascals ran.’
- D. T. To the north of Mexico.
- L. C. Shouldn’t wonder.
- N. B. W. Yes.
- Q. G. Bird lime is best.
- S. S. We do not understand you.

Part 7

- H. H. The fable is as follows. ‘She went into the garden to cut a cabbageleaf to make an apple pie; while she was gone, an old she-bear looked in at the window, ‘What? no soap?’ so *he* died, and *she* very imprudently married the barber, and there were present at the wedding the Picanninnies and the Joblillies and the great Panjorum himself, with a little round button at the top, and they all played at Catch-who-catch-can till the gunpowder ran out at the heels of their boots.’ We do not know the moral.
- L. B. Try for yourself. Surely you’ve got a spoon?

Quoted from *The Grand Panjandrum* by Samuel Foote

Part 8

- F. L. W. You may go on as long as you please, for anything *we* care.
- M. What buisness is it of yours?
- Y. Y. Platinum.
- S. H. We never tasted a decoction of indian-rubber, or boiled log-wood.
- L. F. Aldiboronto-foscoforneo Crononhoton-thologus.
- Z. B. Yes: for instance a brass shoe-horn.
- D. R. Hop-o’-my-thumb is a contraction for Hop-over-my thumb.

16.4 Reviews

Source: Rectory Magazine

According to our monthly custom, we sit down to review the works published during the last month, and sent for our approval. First in order stands a ponderous volume: "Natural Logic, by Professor Poddle:" which purports to be a variety of arguments drawn from observations of nature: these arguments are as ponderous as the book, and, to our weak intellect, perfectly incomprehensible: let us take the first sentence of his chapter on tadpoles, (p. 46.) "*Upon this subject we could wish to deduce even more arguments than we are about: first, the reverberatory processes of Nature, as interwoven with the calumniation (what calumniation?) of astronomy present a picture to the pleasing eye varied as the never-ending kaleidoscope (we never saw one) the probability of paralysation, is, we should say, greater than (than what? do you suppose) than the inferiority of other things as combined in the reciprocity of reaction.*" if you can understand this reader you are wiser than we. Next comes, "The Bandy-legged Butterfly, a tale for youth," *we should say for infants less than a month old, witness the following extract*

"My darling little Mousey-pousey, said the butterfly, good bye, lovey: ta ta pet: take care no naughty wolfey-pulfey hurts my little chicksey-picksey."

we suppose you've had about enough now.

The next is, "The child's first question book" by a Lady: we consider the questions as rather foolish, and the answers as particularly so, but of course the author may judge for herself:

"Q. Who was Alexander the Great?"

A. Please, ma'am, I don't know, but I believe he was king of England.

Q. Who was king of France?

A. Louis the XIth.

Q. Who was king of Rome?

A. Servius Tullius.

Q. Who was king of England?

A. Henry the 3^d.

Q. Well then you see it couldn't have been Alexander, now, what other country is there left?

A. China.

Q. Who was emperor of China.

A. don't know, Ma'am.

Q. What'll you do if you're naughty?

A. Hang.

Q. Very well, then what conclusion do you draw from that?

A. Please 'm, that I won't do naughty.

Q. No, I meant that Hang was Emperor of China, so Alexander couldn't have been him; who was he?

A. King of Macedon."

here eight questions are interposed between the question and answer: what the effect on the unhappy child would be, the reader shall judge.

Editor.

16.5 Moans from the Miserable,¹ or The Wretch's Wail

Source: The Rectory Umbrella

Pitiful Sirs,

We, the undersigned victims of unfeeling, heartless barbarity, entreat you of your pitifulness to “lend an ear,” as the poet saith: alack! we would not have you give it, knowing the treatment our own are subject to. Our owners, or guardians, we know not which they be, declare that they love us, but ah! it must be as Isaak Walton loved the frog, for the essence of their love is cruelty. In proof of this love they do daily bear us about by our ears, kind sirs; mine tingle even to think of it, they do put us down, do catch us up again, do whirl us round, and do howl into our ears words of affection and endearment, the very recollection whereof maketh us to shudder:

“Oh ye whose hearts have nerves,
“Oh ye whose eyes have tears,
“It is not your love you are wearing out,
“But living victim's ears!”

So, an *earnest*² Adieu,
from your *heart*-wrung victims,
The Loved and Tortured.

¹the real authors were the Rectory rabbits.

²reader! pray observe the pun.

16.6 Zoological Papers

Source: The Rectory Umbrella

No. 1. Pixies

The origin of this curious race of creatures is not at present known: the best description we can collect of them is this, that they are a species of fairies about two feet high,¹ of small and graceful figure; they are covered with a dark reddish sort of fur; the general expression of their faces is sweetness and good humour; the former quality is probably the reason why foxes are so fond of eating them. From Coleridge we learn the following additional facts; that they have “filmy pinions,” something like dragon flies’ wings, that they “sip the furze-flower’s fragrant dew,” (that, however, could only be for breakfast, as it would dry up before dinner time), and they are wont to “flash their faery feet in gamesome prank,” or, in more common language, “to dance the polka² like winking.”

Quoted from *Elfin music. Songs of the Pixies* by Arthur Edward Waite

From an old English legend³ which, as it is familiar to most of our readers, we need not here repeat, we learn that they have a strong affection for raw turnips, decidedly a more vulgar sort of food than “fragrant dew”; and from their using churns and kettles we conjecture that they are not unacquainted with tea, milk, butter &c. They are tolerably good architects, though their houses must unavoidably have something the appearance of large dog kennels, and they go to market occasionally, though from what source they get the money⁴ for this purpose, has hitherto remained an unexplained mystery. This is all the information we have been able to collect on this interesting subject. In our next paper we propose to discuss the natural history of “the Lory.”

No. 2. The Lory

This creature is, we believe, a species of parrot: Southey informs us that it is a “bird of gorgeous plumery,”⁵ and it is our private opinion that there never existed more than one, whose history as far as practicable we will now lay before our readers.

Quoted from *Mount Meru* by Robert Southey

The time and place of the Lory’s birth is uncertain: the egg from which it was hatched was most probably, to judge from the colour of the bird, one of those magnificent Easter eggs⁶ which our readers have doubtless often seen; the experiment of hatching an Easter egg is at any rate worth trying.

¹so they are described by the inhabitants of Devonshire, who occasionally see them.

²or any other step.

³a tradition, introduced into notice by the Editor.

⁴vide a similar difficulty, page 1932.

⁵plumage, feathers.

⁶of these a full description may be found in the sixth number of the “Comet.”

That it came into the possession of Cambeo, or Cupid, at a very early age, is evident from its extreme docility, as we find him using it, by all accounts without saddle or bridle,⁷ for a kind of shooting pony in Southey's poem of "the Curse of Kehama." We need not relate its history therein contained, as our readers may see it themselves, so we proceed at once to the conclusion. When Kehama had done for the rest of the gods, and had been thereupon scorched by the combined influence of Seeva's angry eye, and the Amreeta drink, which must have been something like fluid curry powder, it is more than probable that in the universal smash which then occurred, Cambeo's affairs among others were wound up. His goods and chattels were then most likely put up to auction, the Lory included, which we have reason to believe was knocked down to the Glendoveer,⁸ in whose possession it remained for the rest of its life.

Quoted from *The Curse of Kehama* by Robert Southey

After its death we conjecture that the Glendoveer, unwilling to lose sight of its "plumery," had it stuffed, and some years afterwards, at the suggestion of Kailyal, presented it to the Museum at York, where it may now be seen, by the inquiring reader, admittance one shilling. Having thus stated all we know, and a good deal we don't know, on this interesting subject, we must conclude: our next subject will probably be "Fishes."

No. 3. Fishs

The facts we have collected about this strange race of creatures are drawn partly from observation, partly from the works of a German author, whose name has not been given to the world. We believe that they⁹ are only to be found in Germany: our author tells us they have "ordinarely¹⁰ angles¹¹ at them," by which they "can be fanged, and heaved out of the water." The specimens which fell under our observation had *not* angles, as will shortly be seen, and therefore this sketch¹² is founded on mere conjecture.

⁷a bridle would be useless.

⁸a happy spirit with large blue wings like an Aerial Machine.

⁹i. e. Fishs.

¹⁰as he spells it.

¹¹or corners.

¹²the "angles" however may be supposed to be correct.

What the “fanging” consists of we cannot exactly say: if it is anything like a dog “fanging” a bone, it is certainly a strange mode of capture, but perhaps the writer refers to otters. The “heaving out of the water” we have likewise attempted to pourtray, though here again fancy is our only guide. The reader probably will aks, “why put a *Crane* into the picture?” our answer is “the only “heaving” we ever saw done was by means of a Crane.”

This part of the subject however will be more properly treated of in the next paper.¹³ Another fact our author gives us is that “they will very readily swim¹⁴ after the pleasing directions of the staff”: this is easier to understand, as the simplest reader at once perceives that the only “staff” answering to this description is a stick of barley sugar.¹⁵

We will now attempt to describe the “fishs” which we examined. Skin hard and metallic; colour brilliant, and of many hues; body hollow; (surprising as this fact may appear, it is *perfectly true*); eyes large and meaningless; fins fixed, and perfectly useless. They are wonderfully light, and have a sort of beak or snout of a metallic substance: as this is solid, and they have no other mouth, their hollowness is thus easily accounted for. The colour is sticky and comes off on the fingers, and they can swim back downwards just as easily as in the usual way. All these facts prove that they must not on any account be confounded with the English “fishes,” which the similarity of names might at first lead us to do. They are a peculiar race of animals,¹⁶ and must be treated as such. Our next subject¹⁷ will be “The One-winged Dove.”

No. 4: The One-Winged Dove

All the information we can collect on this subject is taken from an advertisement in the *Times*, July 2, 1850, the rest is conjecture.

To begin with the advertisement. “The One-winged Dove must Die, unless the Crane returns to be a shield against her enemies.” From this we draw the

Quoted from *Agony* column in the *Times*, July 15, 18, 22, 25, 1850, and more occurrences in other papers

¹³vide page 1930.

¹⁴“float” would be a better word, as their fins are immoveable.

¹⁵there is an objection to this solution, as “fishs” have no mouth.

¹⁶an incorrect expression: “creatures” would be better.

¹⁷vide page 1930

following facts. (1.) It is a dove with one wing. (2.) The Crane is it's friend. (3.) It has enemies who wish it's death. (4.) The Crane alone can resist these enemies. (5.) The Crane has left it. (6.) (from the mere fact of the advertisement being sent to the Times) The Dove can write. (7.) (from the same fact) The Crane can read. (8.) (do.) The Dove has more than 12s in the world. (9.) (do.) The Crane takes in the Times.

So that here is at any rate a reasonable foundation for conjecture. You are not so clever¹⁸ as we are, Reader, so it will not be surprising if you have not yet discovered that facts (1) and (6) are connected together,¹⁹ and explain each other. Have you now? confess! There is another discovery which has probably hitherto escaped your notice, namely, that fact (2) and (3) are similarly connected.²⁰ So now to begin.²¹

The Crane and the Dove are friends.²² This is natural, as they are both birds: it seems hardly necessary to speculate on the origin of this friendship, perhaps their natural talents,²³ namely, reading and writing, first led to it.

The Dove has but one wing,²⁴ that is, it has lost the other. This is *unnatural*, but we hope to account for it soon. It is evidently this misfortune which prevents it's escaping from it's enemies,²⁵ and this gives us the first clue as to the nature of those enemies. Clearly they cannot be birds; two wings would be no protection against *them*: neither can they be beasts,²⁶ against whom the Crane could be no protection²⁷: they are as clearly not English; the Crane is not wild in England:²⁸ insects are too contemptible a foe. There is only one thing left: come, Reader! you shall have the credit of guessing! that's right! "Fishes." Not "fishes," mind! *that* is an English name, but "fishs."

And we are here met by a startling, a thrilling confirmation in the fact that a *Crane* is to be the shield against these enemies. Turn back, Reader, to the paper²⁹ on "Fishes": what is employed to "fang" those "fishs"? to "heave them out of the water," and so to destroy them? is it not a Crane? This conclusion, then, cannot be disputed.

"Fishes," then, are the Dove's enemies. But why? what occasioned this enmity? everything must have a reason. Be patient, Reader. The Dove, we know, is talented³⁰: it therefore probably writes in Punch: "fishs" have "angles": "angle" is a word of two meanings. What so natural, then, as that it should write jokes on "fishs"? This would of course enrage the said "fishs," and enmity would thereby arise. Is not this clear enough? We know also that "fishs" were

¹⁸this is not meant to dispane the mental capacities of readers in general, or of any reader in particular. Who knows but that Faraday himself may read these pages? Yet, considering the transcendent intellects of the Editor, this assertion, in any given case, has every probability of being true.

¹⁹vide page 1932.

²⁰vide page 1932.

²¹not that we have not begun already, but here commences that close, learned, and unanswerable argument which has made this paper so deservedly celebrated.

²²fact (2).

²³or "accomplishments," which, though common among men, are rarely found in other creatures.

²⁴fact (1.)

²⁵fact (3.)

²⁶or quadrupeds

²⁷fact (4.)

²⁸see Buffon: "wild" does not here mean "savage," but "undomesticated."

²⁹page 1929.

³⁰the use of this word is explained on this page above: note (23).

long ere this enemies to the Crane, because of it's habit of "fanging" them, and "heaving them out of the water." The Crane then was, of all birds, the most proper friend for the Dove to appeal to.

"But," say you, "how could "fishs" kill the Dove?" Oh most stupid and ignorant Reader! have not "fishs" got "angles"? are not "angles" sharp and jagged? How easy then with them to kill so tender³¹ a creature as a One-Winged Dove! And now for the grand question, "how did the Dove lose it's wing?" and the mysterious connection between facts (1) and (6). Reader! you shall guess again. The Dove writes in Punch³²: pens are used in writing: pens are procured from feathers³³: feathers from—yes! you're right! "it uses it's own feathers." Perhaps you are not aware that Punch has been in existence nine years, so that if the Dove was a contributor from the first, the loss of one whole wing is thus easily accounted for. You will surely allow that thus far at least, we build our conjectures entirely on fact?

Is it likely that the Crane should have left the Dove³⁴ in it's present defenceless condition? Certainly not.³⁵ We may safely conclude that it left it while still able to defend itself. When was that? Calculate for yourself, Reader. Punch comes out once a week: probably the Dove writes one article in each number,³⁶ that is, uses one pen or feather each week: thirteen feathers would probably³⁷ make a wing large enough to fly with: it has evidently *none* now: thirteen weeks from the date of it's first advertisement brings us to April 7: can't you guess now? Well then, we must tell you. On April 9th a great *Protectionist* Meeting took place in London. Still stupid? Reader! you are wonderfully slow of comprehension! does not the Crane *protect* the Dove? what other motive *could* it have then for going up to London on the 9th but attending that meeting?

And now what conclusion are we to draw from the facts that the Dove has more than 12s,³⁸ and that the Crane takes in the Times³⁹? We may as well just mention that 12s is the usual price⁴⁰ for inserting such an advertisement in a newspaper. Simply this. The Dove is rich⁴¹: therefore it pays the Crane for defending it, and this accounts for the Crane's taking in the Times: where else could it get the money to do so? "But where," you ask, "where does the Dove get *it's* money?" That, gentle Reader, is it's own affair. We know that it *has* money because otherwise it could not advertise.

One question yet remains unanswered; "where does the Dove live?" that is easily disposed of. "Fishs" are only found in Germany. *There* then the Dove lives. As evidently the Crane is in England, else why advertise⁴² for it in an English paper? "But it left Germany thirteen weeks ago!" you say, "cruel Crane!

³¹by this is not meant that it is tenderer than other doves.

³²see preceding page.

³³generally of a goose or swan, but there is no reason why a Dove's should not be used.

³⁴fact (5.)

³⁵if the Dove was tender-bodied, we may safely conclude that the Crane was tender-hearted, and would "heave" a sigh at the misfortunes of others.

³⁶that is every Thursday. The Umbrella comes out every rainy day.

³⁷this cannot be known for certain without making the experiment.

³⁸fact (8.)

³⁹fact (9.)

⁴⁰we believe the charge is five shillings a line: an advertisement lately inserted, which took up a whole page, cost three hundred pounds.

⁴¹this is further seen from the fact that this advertisement was put in three or four days running.

⁴²how the Dove being abroad, could advertise in England, we confess we can not explain.

why does it not return?" Reader, we echo the question, and we tremble as we do so.

The life of a Crane in England is no safe or easy life: even at this moment probably the Crane is either dead or in a cage. This alone can account for its silence. Alas! poor Dove⁴³! what will you do? you state yourself that you "must die." We fear it is only too true.

Quoted from *Hamlet*
by William
Shakespeare

We are aware that one objection can be brought against this argument, namely, that no one remembers seeing any jokes in *Punch* about "Fishes." This however is no real argument, as the statement at best is negative, and besides, how faithless a thing is memory! Will you, oh Reader, be certain you can remember every joke *Punch* has published for nine years?

We have dwelt thus long and earnestly on this subject, as knowing its difficulty and importance: still we hope we have established *some* facts, cleared up *some* doubts, solved *some* difficulties. At all events we have done our best: we cannot name any subject for our next paper, nor are we at all sure there will be another at all, so at any rate for the present, good Reader, farewell!

⁴³Shakespeare's "Alas, poor Yorick!" though inferior to this passage in simplicity, is almost equal to it in poetical pathos. It seems hardly necessary to add that the idea was *originated* by the Editor, who would scorn to copy any author.

16.7 Representative Men¹

Source: The Rectory Umbrella

The first section ends with “(continued page ...)”, the second with “(continued at page ...)” in the original.

Parody on *Representative Men* by Ralph Waldo Emerson

Lecture 1st. “On the Uses of Little Men”

“The world is made of little men.” ’Tis a little saying, but how true! Go where you will, you meet them: they are the majority of the people, the nobility, the army, the orators. Can an army exist without private soldiers? no more than a house without bricks. For every great man, there are 10,000 little men: aye, and there is work for them, which no great man would do. Do not little men build our houses and ships, till our land, and supply our various wants? Ask the great Alexander to make a pudding. Faugh! But the pudding *must* be made. A most important class truly! and all-worthy of a representative. How profoundly little was the saying of the countryman² when the dumplings came to table. “them’s the jockeys for my money!”

The great men round him laughed at it; *we* know it’s value. Look at the Times: “the smallest terrier in England, lowest price £25” Little! little! is still the cry. Draw up the curtain! Enter, little man!

Quoted from *The book of modern English anecdotes, humour, wit, and wisdom* by Tom Hood

Lecture 2nd. “Cuffey, or the Chartist”

Chartism, or democracy, has always had it’s little men. It is intrinsically a little ambition which inspires it’s followers: they would have all men level: natural representative is Cuffey.³ The little Cuffey was born in humble life: so are all little men: it is a remarkable and peculiar trait *of* little men: in body⁴ he

¹after “Emerson’s Representative Men.”

²a well-known anecdote.

³the history of this man may be found in the Times.

⁴he was a tailor and therefore only ninth part of a man, as every one knows.

was little, in mind, less: his wife took in washing: he gloried in making the fact public: could anything be littler? One fact shews the profound littleness of this man: he declared in public, “I gave my wife *leave* to take in washing.” Leave! no doubt his wife boxed his ears for it afterwards: it was a fitting reward for such littleness. His little seditious attempts had little effect: he and his littleness were transported. Ah! little, *little* man!

Lecture 3d. “Jack Sprat, or the Epicure”

We have the highest authority for stating the fact that Jack, or John Sprat⁵ could eat no fat. The conviction bursts upon us with such a blaze of evidence, that room for doubt there is none. Now, even if we grant that he had a “little” appetite, and so was not sufficiently hungry to desire to eat fat—even granting this, I say, and the admission, instead of lessening, would but strengthen my argument for the littleness of the man—still how can anyone pretend to set aside or step over the fact that he permitted his wife to refuse lean? Yes! it is so stated: “his wife would eat no lean”: not a word his said of his pulling a stop to her whims: no, he submitted with true littleness of mind. All epicures are little, and he is but a common specimen of the class.

Quoted from nursery rhyme

⁵a shade of doubt has been cast over the authenticity of this anecdote on account of the rhyme between “Sprat” and “fat” a singular coincidence.

16.8 Difficulties

Source: The Rectory Umbrella

No. 1

Half of the world, or nearly so, is always in the light of the sun: as the world turns round, this hemisphere of light shifts round too, and passes over each part of it in succession.

Supposing on Tuesday, it is morning at London; in another hour it would be Tuesday morning at the west of England; if the whole world were land we might go on tracing¹ Tuesday morning, Tuesday morning all the way round, till in 24 hours we get to London again. But we *know* that at London 24 hours after Tuesday morning it is Wednesday morning. Where then, in its passage round the earth, does the day change its name? where does it lose its identity?

Practically there is no difficulty in it, because a great part of its journey is over water, and what it does out at sea no one can tell: and besides there are so many different languages that it would be hopeless to attempt to trace the name of any one day all round. But is the case inconceivable that the same land and the same language should continue all round the world? I cannot see that it is: in that case either² there would be no distinction at all between each successive day, and so week, month, &c so that we should have to say "the Battle of Waterloo happened to-day, about two million hours ago," or some line would have to be fixed, where the change should take place, so that the inhabitants of one house would wake and say "heigh ho³! Tuesday morning!" and the inhabitants of the next, (over the line,) a few miles to the west would wake a few minutes afterwards and say "heigh ho! Wednesday morning!" What hopeless confusion the people who happened to live *on* the line would always be in, it is not for me to say. There would be a quarrel every morning as to what the name of the day should be. I can imagine no third case, unless everybody was allowed to choose for themselves, which state of things would be rather worse than either of the other two.

I am aware that this idea has been started before, namely, by the unknown author of that beautiful poem beginning "If all the world were apple pie &c."⁴ The particular result here discussed however does not appear to have occurred to him, as he confines himself to the difficulties in obtaining drink which would certainly ensue.

Any good solution of the above difficulty will be thankfully received and inserted.

¹the best way is to imagine yourself walking round with the sun and asking the inhabitants as you go "what morning is this?" if you suppose them living all the way round, and all speaking one language, the difficulty is obvious.

²this is clearly an impossible case, and is only put as an hypothesis.

³the usual exclamation at waking: generally said with a yawn.

⁴

"If all the world were apple pie,
"And all the sea were ink,
"And all the trees were bread and cheese,
"What *should* we have to drink?"

Quoted from nursery rhyme

No. 2

Which is the best, a clock that is right only once a year, or a clock that is right twice every day? “The latter,” you reply, “unquestionably.” Very good, reader, now attend.

I have two clocks: one doesn’t go *at all*, and the other loses a minute a day: which would you prefer? “The losing one,” you answer, “without a doubt.” Now observe: the one which loses a minute a day has to lose twelve hours, or seven hundred and twenty minutes before it is right again, consequently it is only right once in two years, whereas the other is evidently right as often as the time it points to comes round, which happens twice a day. So you’ve contradicted yourself *once*: “ah, but,” you say, “what’s the use of it’s being right twice a day, if I can’t tell when the time comes?” Why, suppose the clock points to eight o’clock, don’t you see that the clock is right *at* eight o’clock? Consequently, when eight o’clock comes round your clock is right. “Yes, I see *that*,” you reply.⁵ Very good, then you’ve contradicted yourself *twice*: now get out of the difficulty as you can, and don’t contradict yourself again if you can help it.

⁵you *might* go on to ask, “How am I to know when eight o’clock *does* come? my clock will not tell me.” Be patient, reader: you know that when eight o’clock comes your clock is right: very good: then your rule is this: keep your eye fixed on your clock, and the very moment it is right it will be eight o’clock. “But—” you say. There, that’ll do, reader; the more you argue, the farther you get from the point, so it will be as well to stop.

16.9 Hints for Etiquette; or Dining out Made Easy

Source: The Comic Times, October 13, 1855; Mischmasch (as newspaper cutting)
Parody on *Hints on Etiquette and the Usages of Society* by Ἀγώγος (Charles William Day)

As caterers for the public taste, we can conscientiously recommend this book to all diners-out who are perfectly unacquainted with the usages of society. However we may regret that our author has confined himself to warning rather than advice, we are bound in justice to say that nothing here stated will be found to contradict the habits of the best circles. The following examples exhibit a depth of penetration and a fulness of experience rarely met with.

V.

In proceeding to the dining-room, the gentleman gives one arm to the lady he escorts—it is unusual to offer both.

VIII.

The practice of taking soup with the next gentleman but one is now wisely discontinued; but the custom of asking your host his opinion of the weather immediately on the removal of the first course still prevails.

IX.

To use a fork with your soup, intimating at the same time to your hostess that you are reserving the spoon for the beefsteaks, is a practice wholly exploded.

XI.

On meat being placed before you, there is no possible objection to your eating it, if so disposed; still in all such delicate cases, be guided entirely by the conduct of those around you.

XII.

It is always allowable to ask for artichoke jelly with your boild venison; however there are houses where this is not supplied.

XIII.

The method of helping roast turkey with two carving-forks is practicable, but deficient in grace.

XVII.

We do not recommend the practice of eating cheese with a knife and fork in one hand and a spoon and wine-glass in the other; there is a kind of awkwardness in the action which no account of practice can entirely dispel.

XXVI.

As a general rule, do not kick the shins of the opposite gentleman under the table, if personally unacquainted with him: your pleasantry is liable to be misunderstood—a circumstance at all times unpleasant.

XXVII.

Proposing the health of the boy in buttons immediately on the removal of the cloth, is a custom springing from regard to his tender years, rather than from a strict adherence to the rules of etiquette.

16.10 Life of Richard Hakluyt

Source: manuscript for Gaudy oration given on May 31, 1856

Foremost in the ranks of those who have aided the progress of science and civilisation by their writings, and have earned for themselves an imperishable name in the records of History, stand original writers, inventors, and projectors: second to these, and second only so far as their genius is less brilliant, and their names less widely known, are those who have recorded the advance of those before them, who have mapped out the landmarks of the fields of Science already in possession, and from which future investigators are to begin their labours.

It is among this latter class that the name of Richard Hakluyt, sometime Student of Ch. Ch. deserves an honorable mention: the few facts which history has recorded of him all bear testimony to the care and unremitting diligence with which he cultivated Science, and to the success with which his labours were crowned.

He was born, as the learned Anthony Wood informs us, of an ancient and honourable family at Yetton or Yatton in Herefordshire: the date of his birth does not appear to have been accurately ascertained, but it was very nearly in the middle of the 16th century. He received his education in Westminster School, and it was during his residence there that his thoughts were first accidentally directed to those subjects which were destined to engross his attention and labour during the greater portion of his life. He paid frequent visits to the house of a relative, a man of great learning and influence, who is related to have given up his whole life to the encouragement of navigation, commerce, arts and manufactures. The constant sight of the maps and books with which his house was filled, aided probably by the pleasing associations with which the young schoolboy would naturally look back upon these visits, awoke in his mind a love for Science, and inspired him with the resolution to devote his life to these studies.

How effectually he adhered to this resolution we find abundantly proved in the history of his Collegiate Life: he was elected as a student from Westminster to Ch. Ch. in the year 1570, and while here he prosecuted with such success the studies he had begun at Westminster, that we find him soon after taking his degree made Professor of Naval History, in which capacity he delivered public lectures on cosmography and its kindred sciences. We cannot doubt but that there was seen in him some peculiar fitness for this office, a fitness which had led him as a mere boy to devote himself to studies which are usually found so laborious and uninteresting, and obtained for him as a young man a distinction all the more honorable, as he appears to have been at once the first lecturer in this subject, and the cause of the lecture itself being instituted.

A great friend and patron of his, Sir Francis Drake, who about this time made his celebrated voyage round the world, was encouraged by the success of these lectures on naval history, to offer funds for the institution of a lecture on navigation. This was intended to be a continuation of the lecture begun on Hakluyt, and he was requested by Sir Francis to look out a fit person to succeed himself: Hakluyt succeeded in the search, but the nearest approach that was ever made to an arrangement in this matter, was that Sir Francis offered £20 per annum for the lecturer, and that Hakluyt's friend demanded £40, alleging

that less would not support him: and as neither party would alter his terms to accommodate the other, the proposition came to nothing.

Hakluyt however persevered for some years in the lecture to which he had been appointed, and in so rude a state did he find that science at the outset of his course, that to him is ascribed the introduction into England of the use of the globe and other instruments of geography. Besides this, he kept up an active correspondence with all the noted seamen of the day, among whom we may find the name of Gerard Mercator. About at this time, he entered for a short time on the study of law, in the Middle Temple, but whether from the little success he had in that study, or that with a mind so preoccupied as his he found it uncongenial to his tastes, he appears to have soon deserted it for his favourite pursuits. We are informed that he entered into holy orders, probably soon afterwards, but in connection with this we have no further information than the names of the different livings and other ecclesiastical preferments which he held.

His fame as one learned in nautical matters had now reached a more than Oxford celebrity, and we find him frequently consulted by various companies as well as private individuals on the subject of voyages to be undertaken. Through all this he appears to have kept one object steadily before him, the accumulation of all the documents he could find relating to former voyages, and these afterwards constituted the large and valuable collection of voyages which bears his name, and on which his claim to celebrity as a writer chiefly rests.

His was a curious instance of the exclusive direction of the mind to one especial branch of a subject: we do not find that the interest he took in voyages of discovery ever led him to join one in person; nor that his aptitude for collecting and compiling documentary evidence was ever applied to any other branch of history: but for the one of these two great features in his character, he might have been a sailor; but for the other, he might have been an historian. The union of the two made him that character, as which alone he is presented to our view in history, the recorder of naval enterprise.

As secretary to Sir Edward Stafford, who went as ambassador to Paris in the year 1584, Hakluyt found an opportunity for extending the researches he had so long carried on in England. Here it was that he came upon a manuscript, by a captain Laudonnière, relating to the discovery of Florida, and generously furnished the funds necessary for its publication: as this was done under the editorship of Martin Basanier, it does not appear that Hakluyt had any thoughts of acquiring celebrity for himself in doing this: indeed throughout the whole of his literary career, his devotion to Science appears to have been most sincere and disinterested.

On his return to England he gave to the world the first result of his laborious research in the form of a *Collection of Voyages*, in one folio volume, which he dedicated to another patron, Sir Francis Walsingham. This appeared in 1589, but he continued to enlarge this collection during the remainder of his life, until it had reached the bulk of three folio volumes. In the course of this work he records the voyage which his earliest patron, Sir Francis Drake, made round the world. Another voyage, in the relation of which he must have taken an almost personal interest, was that made by Thomas Randolphe, who was also a student at Ch. Ch. and who was sent as an ambassador to the Emperor of Russia in the year 1568. This account is worth noticing, as it furnishes us with a curious picture of the manners and customs of the Russian court of that day.

At the conclusion of his interview with the Emperor, as the ambassador himself relates, he "said unto me: 'I dine not this day openly for great affaires I have, but I will send thee my dinner, and give leave to thee and thine to go at liberty, and augment our allowance to thee, in token of our love and favour to our sister the Queene of England.' I with reverence took my leave, being conveyed by two other of greater calling than those that brought me to the Emperor's sight, who delivered me to the two first gentlemen, who conducted me to the office where I first was, where came unto me one called the Long duke, with whom I conferred a while, and so returned to my lodging. Within one houre after comes to my lodging a duke richly appavelled, accompanied with fiftie persons, ech of them caryng a silver dish with meat, and covered with silver. The duke first delivered twenty loaves of bread of the Emperor's own eating, having tasted the same, and delivered every dish into my hands, and tasted of every kind of drinke that he brought. This being done, the duke and his company sate downe with me, and tooke part of the Emperor's meat, and filled themselves well of all sorts, and went not away from me unrewarded."

The duke here mentioned appears to have filled a situation to which in England we should have given a very different name, but there can be little doubt that this strange and inconvenient honour was intended as a real mark of the Emperor's regard, for we find that this visit was very shortly followed by a grant, made by the Emperor at the ambassador's request, of a great number of privileges for the accomodation of English merchants trading in Russia.

Throughout the whole of this work the style is uniformly simple and unpretending, aiming at no brilliance of writing, but merely at relating in as truthful a manner as possible, the bare facts of the history on which he was engaged. And he does this with all the minuteness of detail, and all the apparent credulity of Herodotus himself.

In another account of a Russian voyage, made by D^r. Giles Fletcher, who went out as ambassador in the year 1588, we find accounts of popular legends and superstitions, which might almost have been taken from the pages of the father of History: "They say that to the men of Lucomoria chaunceth a marveilous thing and incredible: For they affirme, that they die yearly at the XXVII. day of November, being the feast of S. George among the Muscovites: and that at the next spring, about the XXIII. day of April, they revive againe as doe Frogges. With these also the people of Grustintzi and Serponowtzi exercise a new and strange kinde of trade: For when the accustomed time of their dying, or rather of sleeping, approcheth, they leave their wares in certaine places appointed, which the Grustintzi and Serponowtzi carry away, leaving other wares of equal value in their places: which if the dead men at the time of their reviving perceive to be of unequal price, they require their owne againe: by reason whereof, much strife and fighting is betweene them."

He remained with Sir Edward Stafford in Paris for 5 years, during which time he published, or rather re-edited, two works. One of these, by Peter Martyr, bears the title of "De novo orbe," and he afterwards published an English version of it, under the name of "The history of the West Indies." The other was originally written in Portuguese, by Antonio Galvano, governor of Ternate, the chief island of the Moluccas. Hakluyt gave to his translation of this work the name of "The discoveries of the World from the first, original, unto the year of our Lord 1555."

The next of his works is also taken from the Portuguese, and is entitled "Virginia richly valued by the description of the main land of Florida her next neighbour." The author of this work was Ferdinand de Soto.

In the year 1598, just before the publication of this book, he brought out the 3 folio volumes, into which his Collection of Voyages had now grown, and this is in fact the only work which we can, with any idea of the originality of writing, ascribe to his pen. In the year 1605 the government recompensed him, as we are informed, by presenting him to the Rectory of Wetheringset in Suffolk, as well as to a prebendaryship at Bristol: he had been for some years before this a prebendary of Westminster. Whether this recompense had reference to the services he had done to Science or to the Church, we are not informed: indeed there is scarcely any fact preserved in the history of his life, which does not bear, directly or indirectly, upon his literary career.

He did not live long enough to enlarge still further his great work, although he has left sufficient materials to constitute a fourth volume; these, while still in manuscript, fell into the hands of Samuel Purchass, a very similar literary character, and were by him embodied in one or other of his collections of travels and voyages; probably in that which bears the name of "Purchass his Pilgrims."

Richard Hakluyt died in the year 1616, and was buried in Westminster Abbey: a more enduring monument to his fame is to be found on the coast of Greenland, one of whose promontories was named by the navigator Hudson "Hakluyt's Headland."

He had married in the year 1594, and he left behind him one son, named Edmund, to whom he bequeathed his country estate, as well as some property which he held in Westminster. The name of one other of his relations is handed down to us, Oliver Hakluyt, his brother, who was also a student at Ch. Ch. and who, we are told "having graduated in Physic, had an happy hand in the practice of it."

In the works which bear his name, little claim can be found to any originality of authorship: he appears to have been far more zealous to advance the science which he cultivated than to raise his own reputation as a writer. Three of the 5 works which he has left to the world are merely English versions of foreign works, in which accuracy of translation is the only point for which he was personally responsible: what Coleridge said of his system of philosophy, he would doubtless have felt with regards to these records of British Naval Enterprise, namely that he would have been "also lately glad, if he could hear that the thing had already been done before him."

The genius of an original writer, like the enterprising zeal of a first discoverer, or the resistless energy of a conqueror, is apt to dazzle the eyes of those that look on: and they too easily overlook the heavier toil and almost equal abilities which belong to those that come after, and whose part it is to collect and shape the stray efforts of genius, to record for time to come the results of discovery, to secure and perpetuate the gains of conquest.

In the rush and glare of a conqueror's triumphal procession as it sweeps by, the eye is naturally drawn to the one royal figure who forms the nucleus of all that splendour, the ear naturally dwells upon the swelling music which heralds his approach: and we scarcely hear the measured tread of the soldiery, who fill up the intervals in the line, and we hardly notice the dense dark masses against whom the gaudy banners show in such bold relief, and many and many a one, general, and counsellor, and minister of state, goes by unheeded in that

glittering stream, and yet they may have wrought as well and as fully in their work as the great chief himself, whose fortune has been higher than theirs; and but for their labours, unrequited and forgotten, even that mighty genius might have spent himself in vain.

The following set of complimentary verses, addressed to Hakluyt on the subject of his great work "The Collection of Voyages," may not inappropriately conclude this notice of his life.

In Navales Richardi Hakluyti Commentarios

Anglia magnarum facunda puerpera cerum,
Sive solum spectes nobile sive salum.
Quæ quantum sumptis se nobilarerit armis,
Sive domi gessit prælia, sive foris;
Multorum celebrant matura volumina: tanta
Insula materiem parvula landis alit.
At se in quot qualesque et quando effuderit oras,
Quâ fudit ignotum pervia classis iter,
Solius *Hakluyti* decus est, prædivite pennâ
Ostendisse suis civibus ausa mari.
Quæcunque idcirco celeri gens Anglica navi,
Oceani tristes spernere docta minas,
A primâ generisque et gentis origine gessit,
Quæ via per fluctus ulla patere potest,
Sive decus laudemque secuta, ut et hostibus ala
Demeret, atque suis læta pararet opes:
Hoc opus *Hakluyti*; cui debet patria multum,
Cui multum, patriæ quisquis amicus erit.
Quâ re namque magis se nostra Britannia jactat,
Quàm quod sit præter cætera classe potens?
Quam prius obsessam tenebris sic liberat, ut nunc
Quisque sciat, quàm sit nobile classis opus.
Quâ si Dædalicè utemur, surgemus in altum,
Sin autem Icaricè, quod voret, aquor habet.

16.11 Where Does the Day Begin?

Source: The Illustrated London News, April 18, 1857

Observing that this question is now under discussion in your columns (a question which occurred to myself years ago, and for which I have never been able to meet with a satisfactory solution), I am anxious that your correspondents should be aware what the real difficulty of the question is. According to the statement of "T. J. Buckton, Lichfield," the day is always commencing at some point or other on the globe; so that if one could travel round it in twenty-four hours, arriving everywhere exactly at midnight by the time of the place, we should find each place in a state of transition of name. But if for midnight we substitute mid-day we are at once involved in a difficulty. The case may be briefly stated thus:—Suppose yourself to start from London at mid-day on Tuesday, and to travel with the sun, thus reaching London again at mid-day on Wednesday. If at the end of every hour you ask the English residents in the place you have reached the name of the day, you must at last reach some place where the answer changes to Wednesday. But at that moment it is still Tuesday (one p.m.), at the place you left an hour before. Thus you find two places within an hour in time of each other, using different names for the same day, and that not at midnight when it would be natural to do so, but when one place is at mid-day, and the other at one p.m. Whether two such places exist, and whether, if they do exist, any communication can take place between them without utter confusion being the result, I shall not pretend to say: but I shall be glad to see any rational solution suggested for the difficulty as I have put it.—

16.12 Photographic Exhibition

Source: Illustrated Times, January 28, 1860; Mischmasch (as newspaper cutting)
In *Mischmasch* the newspaper cutting is preceded by the headline "Review" and
"From the *Illustrated Times*, Jan. 28/60. N.B.—The concluding sentence is *not* by
the Editor of this Magazine."

There is very little novelty to call for notice this year, either in subject, or mode of treatment, or chemical process. In the last respect—with some few exceptions, as Janpenot's and Fothergill's process, collodio-albumen, &c.—the old collodion process constitutes the staple of the exhibition.

The merits and demerits of photographs are, generally speaking, so entirely chemical as to leave little subject for art-criticism. In the quality of chemicals employed the photographer has generally no further concern than in the choice of a chemist; and in such subjects as copies of painting, &c., there is really nothing by which the skill, or want of skill, of the artist himself can be tested. All is done for him. The chief merit of which photographs are capable as chemical productions is sensitiveness of collodion, or other vehicle, and capability of reproducing minute details. This is best tested by foliage and old stonework—foliage especially, as the green presents an obstacle to the photographer which has never been perfectly overcome. The best examples of successful treatment of this may be found in Messrs. Cundall and Downes'—No. 31, Mr. L. Smith's 23 and 47, Lieut. Holder's No. 66 (though suffering a little from a want of light), and Mr. Robinson's Nos. 73 and 61; the latter is, perhaps, the best specimen of this year. In stonework we would call especial notice to Messrs. Bisson's beautiful pictures—(Nos. 30, 34, 35, 36)—nothing can exceed the perfection of detail exhibited by the roof in No. 30; and 35 contains a most successful moonlight effect, though no doubt taken in sunlight. Then there are those of Messrs. Cundall and Downes (No. 40); Mr. Barnes (No. 17), where the crumbling stonework of the old college fronts is most truthfully rendered; Mr. Grice (21), all Mr. Piper's; while, perhaps, the best specimen of detail in architecture and foliage combined is to be found in Mr. Bedford No. 432. As similar subjects we may call attention to Mr. White's 155 and Mr. Fenton's 121 and 145; in the latter he has most successfully contended with the additional difficulty of winter light. However, this merit of sensitiveness of collodion may be carried to an extreme, so as to fail in giving the necessary contrast of light and shade, and so to produce a general flat effect. An instance of this may be seen in Mr. Fenton's 130.

The artist himself is mainly responsible in views for choice of point of view and time of day, and (occasionally) the arrangement of foreground accessories; in such subjects as copies of pictures, &c., for focussing alone; and in portraits, for choice of light, altitude, and grouping.

As instances of taste in choice of view Lord Alfred Churchill's 234 and Mr. Bedford's 238 are well worthy of notice; the former is a thoroughly poetical picture. In the upper picture of 238 the tree in the foreground is perfectly placed, and in the lower remarkable taste has been shown in getting the mass of white formed by the cottage and the cascade just far enough out of the centre to avoid stiffness of composition, and yet not so far as to overbalance the picture by an excess of light on one side; two other good specimens of this may be found in Messrs. Cundall and Downes' 281, and Mr. Mudd's 315.

Instances of good choice of light may be found in Messrs. Maull and Polyblank (No. 5), Mr. Grice (21), Mr. Mudd (37), and Mr. Fenton (150); the last, an interior, is an especially difficult subject.

For good focusing Mr. White's No. 155 may be taken as an instance. This picture is excellent in every way, the collodion having been perfectly sensitive, and a very still day chosen for taking the picture, thus avoiding the too common fault of woolly foliage. The facsimiles of music by Mr. Ripplingham (Nos. 558, 561, and 562), and the copy of a map which faces the spectator on entering, are also first-rate.

In taking portraits a well-arranged light is of paramount importance. We have already noticed a remarkable instance of this in No. 5, and another may be found in Mr. Hering's 237, and Messrs. Watkins' 2 and 26. This point is of especial importance, as without it all softness of feature is hopeless.

The grouping of Messrs. Hennah and Kent's 312, and Mr. Robinson's 98 and 493, is especially good. In all the important result of unity of picture has been obtained by giving to the different figures one object of attention; thus, the cricketing group in 312 may be supposed to be watching a match going on behind the spectator, and in 98 some object to the right has evidently diverted for a moment the attention which would naturally be directed to the spectator himself.

In single portraits the chief difficulty to be overcome is the natural placing of the hands; within the narrow limits allowed by the focussing power of the lens there are not many attitudes into which they naturally fall, while, if the artist attempts the arrangement himself, he generally produces the effect of the proverbial bashful young man in society who finds for the first time that his hands are an incumbrance, and cannot remember what he is in the habit of doing with them in private life. Mr. Hering's portraits generally are specimens of what may be done overcoming this difficulty. His portraits of children in No. 327 are nearly all excellent, while the two end ones, and the third from the left in the upper row, are as nearly perfection in this line of art as the present state of photography admits of; the last-mentioned picture (with the trifling drawback of an awkward pose of the right hand) is not surpassed by any in the room. Among pictures of this sort Messrs. Lock and Whitfield also deserve notice, especially the child in profile No. 231, and the same exquisitely coloured in 331. The colouring itself does not of course constitute a branch of photography. Beautiful instances of this may be found in Nos. 331, 342, 343, 357, and 366. All Mr. Herbert Watkins's portraits are artistic and lifelike.

We turn now to a less pleasing portion of our task—the fault of photographs. These, like their merits, chiefly consist in choice of view, lighting, focussing, grouping, &c., and in all these respects instances may be pointed out which may act as beacons to the young adventurer in the art.

A common fault in choice of view is getting the principal object exactly into the centre, or, at all events, so near to it that the calculating faculty is at once aroused instead of the imaginative, and the spectator longs for a foot rule to ascertain whether the picture is exactly bisected or not. Instances of this may be seen in 197 and 295, the latter having the additional fault of facing the spectator full instead of a little obliquely, which is the more pity as Magdalen Tower presents so many much better aspects from other directions. In No. 120 a very curious effect is produced by the absence of all the usual standards of measurement, for want of which the spectator can scarcely avoid taking the

edging to the flower-borders for the height of ordinary railings, and so raising the windows above into gigantic proportions.

Bad lighting is another very common fault; this may be studied in Nos. 67 and 135, the latter giving one the idea of the fish having been left out till so late at night that the forgetful sportsman is forced to bring a lantern to look for them.

But it is grouping that the chief difference lies between the artist and the mere chemical manipulator, and melancholy instances of what may be done in this way are only too easy to point out. Mr. Robinson's groups are usually exquisite, and some of his have already been noticed as such; but in No. 68 not only has the head of the principal figure been thrown out of focus for the sake of other parts of the picture, but the infant has been so placed that its feet are terribly magnified, giving it the effect of a hideous dwarf. The same remark applies to 459, where this group is repeated, though the effect is rather less apparent from the diminution of the picture. Mr. Robinson has also inflicted a pair of very large feet on the central figure in 98, a picture otherwise admirable. In No. 183 he has thrown all three figures into strained and unlikely attitudes while the eyes of the right-hand girl would most certainly be fixed on the spectator, who is necessarily close upon the group. In No. 142 there is a unity of attention given to the group, but it is centred on nothing; the eye involuntarily wanders over the pile of logs in search of the figure of the stump orator or field preacher who *ought* to be there, but whose motions appear to have been too continuous and energetic for photography to catch him. In 501 the figures, though practised actors, are greatly wanting in life and meaning; but perhaps the crowning instance of what may be achieved by a resolutely stiff and conventional arrangement may be found in No. 537. A resigned gloom has settled over nearly all the unfortunate victims; and if the second picture from the right in the top row were only labelled "Entrance to a Panoramic Exhibition, all the seats full, and no view to be had from the door," it would be indeed excellent.

One other fault, but much less common than any of the preceding, remains to be noticed—the attempting of manifest impossibilities. Some instances of this may be found in Mr. Piper's beautiful pictures, where, by taking a point of view too near for the powers of the lens, a disagreeable pyramidal effect is given to the buildings—see Nos. 44, 51, and 196. This effect may be especially noticed in 244, where the buildings actually appear to be falling. In 198 and 305 effects are attempted which cannot possibly be all in focus at once, and a woolliness of effect is inevitable.

Mr. Paul Pretsch's nature engraving is interesting, though the result is so uniformly dark as to be hardly satisfactory.

I have omitted to mention some fine views of Niagara Falls exhibited by the London Stereoscopic Company. Through an oversight, probably, they are not numbered in the catalogue, but they nevertheless are well worthy the attention of the visitor. I would especially mention "The General View of Niagara," embracing the Horseshoe Fall, Goat Island, and the American Fall.

The Lounger.

16.13 Feeding the Mind

Source: Oxford Magazine and Church Advocate, December 1861 (based on a lecture given on April 9, 1861); posthumous publication based on a variant of the lecture given in October 1884 with minor differences as noted

Breakfast, dinner, tea; in extreme cases, breakfast, luncheon, dinner, tea, supper, and a glass of something hot at bed-time. What care we take about feeding the lucky body! Which of us does as much for his mind? And what causes the difference? Is the body so much the more important of the two?

By no means: but *life* depends on the body being fed, whereas we can continue to exist as animals, (scarcely as men,) though the mind be utterly starved and neglected. Therefore nature provides that, in case of serious neglect of the body, such terrible consequences of discomfort and pain shall ensue, as will soon bring us back to a sense of our duty: and some of the functions necessary to life she does for us altogether, leaving us no choice in the matter. It would fare but ill with many of us, if we were left to superintend our own digestion and circulation. "Bless me!" one would cry, "I forgot to wind up my heart this morning! To think that it has been standing still for the last three hours!" "I can't walk with you this afternoon," a friend would say, "as I have no less than eleven dinners to digest. I had to let them stand over from last week, being so busy—and my doctor says he will not answer for the consequences if I wait any longer!"

Well is it¹, I say, for us, that the consequences of neglecting the body can be clearly seen and felt: and it might be well for some, if the mind were equally visible and tangible—if we could take it, say, to the doctor, and have its pulse felt. "Why, what have you been doing with this mind lately? How have you fed it? It looks pale, and the pulse is *very* slow." "Well, doctor, it has not had much regular food lately: I gave it a lot of sugar-plums yesterday." "Sugar-plums? What kind?" "Well, they were a parcel of conundrums, Sir." "Ah, I thought so. Now, just mind this: if you go on playing tricks like that, you'll spoil all its teeth, and get laid up with mental indigestion. You must have nothing but the plainest reading for the next few days. Take care, now! No novels on any account?"

Considering the amount of painful experience many of us have had in feeding and dosing the body, it would, I think, be quite worth our while to try and translate some of the rules into corresponding ones for the mind.

First, then, we should set ourselves to provide for our mind its *proper kind* of food: we very soon learn what will, and what will not, agree with the body, and find little difficulty in refusing a piece of the tempting pudding or pie which is associated in our memory with that terrible attack of indigestion, and whose very name irresistibly recalls rhubarb and magnesia; but it takes a great many lessons to convince us how indigestible some of our favourite lines of reading are, and again and again we make a meal of the unwholesome novel, sure to be followed by its usual train of low spirits, unwillingness to work, weariness of existence,—in fact, by mental night-mare.

Then we should be careful to provide this wholesome food in *proper amount*. Mental gluttony, or *over-reading*, is a dangerous propensity, tending to weakness

¹it is

of digestive power, and in some cases to loss of appetite; we know that bread is a good and wholesome food, but who would like to try the experiment of eating two or three loaves at a sitting? I have heard of a physician telling his patient—whose complaint was merely gluttony and want of exercise—that “the earliest symptom of hyper-nutrition is a deposition of adipose tissue,” and no doubt the fine long words greatly consoled the poor man under his increasing load of fat. I wonder if there is such a thing in nature as a *fat mind*? I really think I have met with one or two: minds which could not keep up with the slowest trot in conversation, could not jump over a logical fence to save their lives, always got stuck fast in a narrow argument, and, in short, were fit for nothing but to waddle helplessly through the world.

Then, again, though the food be wholesome, and in proper amount, we know that we must not consume *too many kinds at once*. Take the thirsty haymaker² a quart of beer, or a quart of cider, or even a quart of cold tea, and he will probably thank you (though not so heartily in the last case): but what think you his feelings would be if you offered him a tray, containing a little mug of beer, a little mug of cider, another of cold tea, one of hot tea, one of coffee, one of cocoa, and corresponding vessels of milk, water, brandy-and-water, and buttermilk? The sum total might be a quart, but would it be the same thing to the haymaker?

Having settled the proper kind, amount, and variety of our mental food, it remains that we should be careful to allow *proper intervals* between meal and meal, and not swallow the food hastily without mastication; so that it may be thoroughly digested; both which rules, *bodily*³, are also applicable at once to the mind. First as to the intervals—these are as really necessary as they are for the body, with this difference only, that, while the body requires three or four hours’ rest before it is ready for another meal, the mind will in many cases do with three or four minutes: I believe that the interval required is *much shorter* than is generally supposed, and from personal experience I would recommend *the reader*⁴, who has to devote several hours together to one subject of thought, to try the effect of such a break, say once an hour—leaving off for five minutes only each time, but taking care to throw the mind absolutely “out of gear” for those five minutes, and to turn it entirely to other subjects. It is astonishing what an amount of impetus and elasticity the mind recovers during those short periods of rest. And then as to the mastication of the food; the mental process answering to this is simply *thinking over* what we read: this is a very much greater exertion of mind than the mere passive taking in the contents of our author—so much greater an exertion is it, that, as Coleridge says, the mind often “angrily refuses” to put itself to such trouble—so much greater, that we are far too apt to neglect it altogether, and go on pouring in fresh food on the top of the undigested masses already lying there, till the unfortunate mind is fairly swamped under the flood. But the greater the exertion, the more valuable, we may be sure, is the effect: one hour of steady thinking over a subject, (a solitary walk is as good an opportunity for the process as any other,) is worth two or three of reading only.

And just consider another effect of this thorough digestion of the books we read; I mean the arranging and “ticketing,” so to speak, of the subjects in our

²missing in later version

³for the body

⁴anyone

minds, so that we can readily refer to them when we want them. Sam Slick tells us that he has learnt several languages in his life, “but somehow couldn’t keep the parcels sorted in his mind;” and many a mind, that hurries through book after book, without waiting to digest or arrange anything, gets into that sort of condition, and the unfortunate owner finds himself far from fit really to support the character all his friends give him—“A thoroughly well-read man: just you try him in any subject, now. You can’t puzzle him!” You turn to the thoroughly well-read man, you ask him a question, say in English History; (he is understood to have just finished reading Macaulay): he smiles good-naturedly, tries to look as if he knew all about it, and proceeds to dive into his mind for the answer. Up comes a handful of very promising facts, but, on examination, they turn out to belong to the wrong century, and are pitched in again; a second haul brings up a fact much more like the real thing, but unfortunately along with it comes a tangle of other things, a fact in political economy, a rule in arithmetic, the ages of his brother’s children, the market-days in Oxfordshire,⁵ and a stanza of Gray’s Elogy, and among all these the fact he wants has got hopelessly twisted up and entangled: meanwhile, every one is waiting for his reply, and, as the silence is getting more and more awkward, our well-read friend has to stammer out some half-answer at last, not nearly so clear or so satisfactory as an ordinary schoolboy would have given. And all this for want of making up his knowledge into proper bundles, and ticketing them!

Do you know the unfortunate victim of ill-judged mental feeding when you see him? Can you doubt him? Look at him, dreadingly wandering round a reading-room, tasting dish after dish—we beg his pardon, book after book—and⁶ keeping to none: first a mouthful of novel, but no, faugh! he has had nothing but that to eat for the last week, and is quite tired of the taste: then a slice of science, but you know at once what the result of *that* will be—ah, of course, much too tough for *his* teeth! And so on through the old weary round, which he tried⁷ (and failed in) yesterday, and will probably try (and fail in) to-morrow.

Mr. Holmes⁸, in his very amusing book, “The Professor at the Breakfast-table,” gives the following rule, (I quote from memory,) for finding a person’s age: “to ascertain the age of a given human animal, place within its reach, about an hour before dinner time, a large bun; if accepted, and greedily devoured, the individual is certainly young; if politely declined, the individual has, as certainly, reached maturity.”⁹

To ascertain the healthiness of the mental appetite of a human animal, place in its hands a short, well-written, but not exciting treatise on some popular subject:¹⁰ if read with eager interest and perfect abstraction¹¹, and if the reader can answer questions on the subject afterwards, the mind is in first-rate working order; if it be politely laid down again, or perhaps lounged over for a few minutes, and then, “I can’t read this stupid book! Would you hand me the

⁵missing in later version

⁸Mr. Oliver Wendell Holmes

⁹rule for knowing whether a human being is young or old: ‘The crucial experiment is this—offer a bulky bun to the suspected individual just ten minutes before dinner. If this is easily accepted and devoured, the fact of youth is established.’ He tells us that a human being, ‘if young, will eat anything at any hour of the day or night.’

¹⁰subject—a mental *bun*, in fact.

¹¹attention

second volume of the “Mysterious Murder?” you may be equally sure that there is something wrong in the digestive organs¹².

I wonder into what class of mental food, my reader, you will put this paper? It is rather difficult to find anything exactly analogous to it in the case of the body—something like dining on a cookery-book, I am afraid you will say. It matters little, however, what you think of the paper itself.¹³ If it¹⁴ has given¹⁵ any useful hints on the important subject of reading, and made you see that it is one’s duty, no less than one’s interest, to “read, mark, learn, and inwardly digest,” the good books that fall in your way, its purpose will have been fully answered¹⁶.

16.14 Enigma

Source: printed 1866, with "Explication" separate; attributed to Bishop Samuel Wilberforce, though this is probably the earliest printed version, though it is not sure whether indeed Carroll printed it

I have a large Box, with two lids, two caps, three established Measures, and a great number of articles a Carpenter cannot do without.—Then I have always by me a couple of good Fish, and a number of a smaller tribe,—besides two lofty Trees, fine Flowers, and the fruit of an indigenous Plant; a handsome stag; two playful Animals; and a number of a smaller and less tame Herd:—Also two Halls, or Places of Worship; some Weapons of warfare; and many Weathercocks:—The Steps of an Hotel: The House of Commons on the eve of a Dissolution; Two Students or Scholars, and some Spanish Grandees, to wait upon me.

All pronounce me a wonderful piece of Mechanism, but few have numbered up the strange medley of things which compose my whole. *Nov. 1866.*

Explication of the Enigma

The WHOLE,—is MAN.

The PARTS are as follow.

A large Box—The Chest.

Two lids—The Eye lids.

Two Caps—The Knee Caps.

Three established Measures—The nails, hands, and feet.

A great number of articles a Carpenter cannot do without,—Nails.

A couple of good Fish—The Soles of the Feet.

A number of a smaller tribe—The Muscles. (Mussels).

Two lofty Trees—The Palms (of the hands).

Fine Flowers—Two lips, (Tulips), and Irises.

The fruit of an indigenous Plant—Hips.

A handsome Stag—The Heart. (Hart).

Two playful Animals—The Calves.

A number of a smaller and less tame Herd—The Hairs. (Hares).

Two Halls, or Places of Worship—The Temples.

Some Weapons of Warfare—The Arms, and Shoulder blades.

Many Weathercocks—The Veins. (Vanes).

The Steps of an Hotel—The Insteps. (Inn-steps).

The House of Commons on the eve of a Dissolution—Eyes and Nose.

(Ayes and Noes).

Two Students or Scholars—The Pupils of the Eye.

Some Spanish Grandees—The Tendons. (Ten Dons).

Nov. 1866.

16.15 The Organization of Charity

Source: Pall Mall Gazette, January 24, 1867

To the EDITOR of the PALL MALL GAZETTE

SIR,—At this inclement season, when the appeal for aid from the benevolent is rising from all quarters, it seems a fit opportunity for discussing methods of facilitating and stimulating the flow of national benevolence.

I believe that a great deal of possible charity is retarded, or altogether withheld, through the difficulty, first of selecting the objects for benevolence, and secondly of reaching them when selected.

Let us take the case of some wealthy and charitably disposed Englishman. By reference to the advertisements, and to the lists of contributions acknowledged in the newspapers, he can with some trouble collect for himself the names of the principal institutions in need of help. Such a list will of course be far from complete, and that is of itself unsatisfactory to any one wishing to do the *best* with the means at his disposal. Let us suppose, however, that he has selected half a dozen of these, and has decided on the sums to be contributed to each; he will now have to procure half a dozen post-office orders, payable to as many different secretaries, and to post each of them in a separate envelope. Now, without diverging into a discussion of the existing system of post-office orders, it is enough to say that no one can have often gone through the process of procuring them without retaining a tolerably lively sense of the tediousness of the operation; and in addition to the trouble, there is a clear waste of money entailed on our charitable friend. I do not think that the process of sending the money by cheques (which would generally be paid into different banks) would be found, on the whole, less troublesome or less expensive.

Now the charitably disposed Englishman, like the rest of his countrymen, is a lover of ease, and not unlikely to limit the flow of his benevolence to those directions in which he found its exercise least troublesome and least trammelled with the necessity of additional and (so far as his object is concerned) wasted expenditure.

It is much more easy to point out an evil than to suggest a practicable remedy; but I am inclined to believe that if the following ideas, Utopian as they may seem, could be in some form realized, the cause of national benevolence would be furthered. The object to be aimed at I take to be a central point, *to* which, and again *from* which, the streams of benevolence should flow: one where contributions could be received, by some simple process, from all quarters, and for all charitable purposes, and handed over again, *without deduction*, to the objects designated, and from which information should be circulated of the names, purposes, claims, and progress of the various charitable institutions. Could such an object be attained, I believe that the giving of charity would be made so much more easy and attractive to those who, having abundance to give, need only information as to where and how to give it, that probably much more would be given.

To give this idea more of a tangible shape, let us imagine the existence of a "National Philanthropical Society." It would have something of the character of a bank, in which money might be deposited to be hereafter assigned to charitable

objects, if any chose so to do. It would receive as money cheques on all country banks, and would transfer the amount without deduction to the accounts of the various charities designated. There would be a register kept, in which, by paying a small annual fee, any charitable society or institution might have its name entered, with a short statement of its history and objects, and might add any further statement by paying for it as an advertisement. This register, with list of contributions, would be published from time to time, as cheaply as possible, and also largely circulated gratuitously (for instance, copies might be sent to all ministers of religion, to libraries, waiting-rooms on railways, &c.) And it would be a great addition to the usefulness of this society if there were a committee, who would receive money sent for general purposes (such as hospitals, churches, &c.), and make grants from time to time from such "general" funds to whichever particular institutions they considered most in need of help.

The necessary expenses of such a society might be defrayed partly by the fees for registration, partly by the advertisements, and partly by voluntary contributions.—I am, Sir, your obedient servant,

Charles L. Dodgson,
Student of Christ Church, Oxford.
Jan. 22, 1867.

16.16 Woodstock Election

Source: Oxford University Herald, November 28, 1868

To the Editor of the "Oxford University Herald."

SIR,—With your well-known impartiality, you will not, I trust, object to admit a Liberal communication to your columns. The proceedings at the recent election at Woodstock were so remarkable, and reflect so deep a discredit on the Conservative cause, that a sense of honour should compel even a Conservative paper to give publicity to them, if only as a warning to others of that misguided faction.

The following account appeared in the 'Oxford Chronicle' of Saturday last, and I am sure the eloquent writer will not object to my quoting it 'in extenso':—

"Having been present as a spectator at the Woodstock election during the whole of Tuesday, I should be glad if you would allow me the use of your columns to state one or two significant facts which may be interesting to the public. At the declaration of the result of the poll, the successful candidate, Mr. Barnett, endeavoured in vain to address the crowd. Not a word was audible amidst the hootings and execrations which greeted him. The defeated candidate, Mr. Brodrick, was received with enthusiastic cheering, and listened to in perfect silence. The successful candidate had to be escorted at every appearance in public by twenty or thirty policemen, and even then seemed hardly secure from personal violence. His unsuccessful rival walked without a single person attending him through the middle of the cheering crowd. Throughout the whole time I did not hear one shout for Barnett or one groan for Brodrick. In what sense, Sir, may I ask, is Mr. Barnett to be considered to 'represent Woodstock?'"

Facts like these, Sir, speak for themselves: but, with your permission, I will offer a few remarks 'to point the moral and adorn the tale.' The real origin of the scandal, the true cause of the cowardly conduct of the Conservative majority is not far to seek. What but ducal influence could have so far degraded the spirit of true-born Britons, and banished the cabbage-stalks and dead kittens, the natural weapons of freemen? But enough on this painful theme: let us turn to the account of the actual proceedings.

We are told, Sir, that the successful candidate, Mr. Barnett, "*attempted in vain to address the crowd. Not a word was audible amidst the hootings and execrations which greeted him.*" I cannot, Sir, tell you in words how refreshing to my ears were those manly voices! Though Tory tricks, aristocratic art, and the brute force of numerical superiority, had turned the day against that noble and enlightened minority, I seemed to hear in those voices the knell of a dying monster, the crashing downfall of the rotten fabric of Conservatism!

Mark, however, the contrast when the defeated candidate, Mr Brodrick, comes forward. He "*was received with enthusiastic cheering, and listened to in perfect silence.*" I do not, of course, suppose that the Conservative electors were hypocrites enough to join in the enthusiastic cheering; such depths of baseness have not yet, let us hope, been reached, even in degenerate Woodstock. But that he should be "*listened to in perfect silence!*" Sir, my blood boils within me at the thought. What! That a set of electors, with lungs in their bodies and breath in their lungs, should listen to a political opponent "*in perfect silence!*"

Quoted from *The Vanity of Human Wishes* by Samuel Johnson

It is too mean, too pitiful for belief: "execrations," possibly, their vocabulary may have been deficient in, (though even these they might have picked up, with attention, from their Liberal brethren), but surely they might have hooted!

But we have not yet nearly reached the depths of this abyss of infamy. The successful candidate, we are told, "*had to be escorted at every appearance in public by twenty or thirty policemen, and even then seemed hardly secure from personal violence.*" This is as it should be: else what are fists meant for in 'Merrie Englande'? Arguments may fail to convince the Conservative blockheads; even hootings and execrations may be unheeded by such crass intellects as theirs: but the 'one, two,' delivered from the shoulder, is a mode of reasoning that the dullest cannot ignore—it is a thick skull indeed that is insensible to a brickbat!

And now, Sir, for the contrast—Look on this picture, and on this. "*His unsuccessful rival walked without a single person attending him through the middle of the cheering crowd.*" Sir, the feats of Van Amburgh pale before this unprecedented display of heroism. His experience of the tender mercies of the gallant Liberal electors towards the Conservative candidate had doubtless prepared him for very different conduct: he felt that he was courting danger—that from that hostile crowd he could scarcely expect to emerge without a torn coat, a black eye or two, and possibly a broken head. And for the first few yards of his perilous march no doubt he moved on with beating heart, with fists clenched, and elbows squared ready for the combat. But he little knew the cowards among whom he went! Not a man dared to lay a finger on him: with bowed heads and bated breath the poltroons sneaked away wherever his manly form was seen. If the indignation of his soul could have found vent in words, might he not in some such sort as this have apostrophised those lily-livered minions?—

"Conservative cravens, where are ye? Brodrick, the son of Brodrick, dares you to the fray. Have ye voices, only to vote with—and are political fights to be waged only in the polling-booth? What is demonstration to a dig in the ribs? Is there any reasoning like rotten eggs? What, not one shout for Barnett? Not one groan for Brodrick! And you call yourselves Englishmen? O tempora, O mores!"

The writer asks, in conclusion, "*in what sense is Mr. Barnett to be considered to represent Woodstock?*" Let Oxford, Liberal Oxford, make reply. So long as Woodstock is degraded by a voiceless, heartless, Conservative majority, who can neither hoot, pelt, nor even execrate their foes, we must with shame confess that Mr. Barnett only too truly represents them. *But* if the noble band of Liberals, whose prowess I have here recorded, should ever become the majority—then indeed, to represent so fine a phase of political enthusiasm, no Barnett, no Brodrick, may we not add no English gentleman whatever, can be found fully and really competent!

I am, Sir, your obedient servant,

"A LIBERAL OF THE LIBERALS."
Nov. 24, 1868.

16.17 Original Research

Source: Pall Mall Gazette, October 29, 1874

To the EDITOR of the PALL MALL GAZETTE

SIR,—The scientific men of this day may well congratulate themselves, whatever Mr. Roscoe may say to the contrary, on having found in Dr. Appleton so eloquent an advocate of their claims. What they could not gracefully say for themselves he has said for them; and even if it be true, as Mr. Roscoe insinuates, that the learned Doctor does not know by his own experience all that is conveyed by the phrase “original research,” and so has no personal interest in the result of his efforts, surely that circumstance only gives him a greater claim to be heard. But there is a danger of which he hardly seems aware—that the very moderation and modesty of his proposal may prove fatal to it. This is not a thing that can be done by halves: a tentative and parsimonious experiment would be almost sure to fail, and then the whole theory would be discredited. I cannot but hope that Dr. Appleton will now essay a bolder flight, and give us a scheme really worthy of the nation and of the age. To begin with, the income offered must be ample: original research can never be carried on as a *πάρεργον*: the investigator must not only be saved from the necessity of running any other occupation, but he must also be set entirely above the petty cares which make such inroads upon the time and temper of those to whom ceremony is a duty. A thousand a year is the very least sum that can be named for this purpose. This is only for the necessities of life. Books, machinery, chemicals, assistants, &c., must all be liberally provided; and this would require at least a thousand more. But not only must the means provided be ample; ample time must also be allowed; and on this point I venture to think that Dr. Appleton has understated his case. To set a really scientific man to a great investigation and then to demand a tangible result in so short a time as three years is really almost as if the nation were to pension Mr. Holman Hunt and then request him to produce a picture every three weeks. “All great things” (I am quoting from Professor Tyndall’s eloquent address to the British Association) “come slowly to the birth. Copernicus pondered his great work for thirty-three years; Newton for nearly twenty years kept the idea of gravitation before his mind; Darwin for two-and-twenty years pondered the problem of the origin of species.” I do not think that Dr. Appleton would find forty years an excessive period to name. When a man feels that he is secure for such a period as that of an ample income, free from interruption, and furnished with all appliances needful to follow out the bent of his genius, remarkable results may fairly be expected.

One other point remains to be noticed—the question of providing funds. Dr. Appleton’s suggestion, made in the *Fortnightly Review*, that suitable funds exist at Oxford and Cambridge, is too indefinitely stated to be practical. To withdraw any large portion of the funds now employed in paying professors and tutors would seriously interfere with the educational work of the place; but no such objection can be urged against the course of abolishing all sinecure and non-resident Fellowships. In many cases, of course, it would be necessary to wait for a vacancy, as vested rights must be respected; still, it may be hoped that some holders would be found who, happy in the consciousness that they were

thus aiding a great and glorious work, would be willing to resign at once.—I
am, Sir, your obedient servant,

Rusticus Expectans.

October 28.

16.18 Memoria Technica (1877)

Source: cyclostyled 1877

for Numbers

1	2	3	4	5	6	7	8	9	0
<i>b</i>	<i>d</i>	<i>t</i>	<i>f</i>	<i>l</i>	<i>s</i>	<i>p</i>	<i>h</i>	<i>n</i>	<i>z</i>
<i>c</i>	<i>w</i>	<i>j</i>	<i>qu</i>	<i>v</i>	<i>x</i>	<i>m</i>	<i>k</i>	<i>g</i>	<i>r</i>

Each digit is represented by one or other of two consonants, according to the above table: vowels are then inserted *ad libitum* to form words, the significant consonants being always at the *end* of a line: the object of the is to give the important words the best chance of being, by means of the rhyme, remembered accurately.

The consonants have been chosen for the following reasons.

- (1) *b*, *c*, first two consonants.
- (2) *d* from “*deux*”; *w* from “*two*”
- (3) *t* from “*trois*”; *j* was the last consonant left unappropriated.
- (4) *f* from “*four*”; *qu* from “*quatre*.”
- (5) *l* = 50; *v* = 5.
- (6) *s*, *x*, from “*six*.”
- (7) *p*, *m*, from “*septem*.”
- (8) *h* from “*huit*”; *k* from ὀκτώ.
- (9) *n* from “*nine*”; *g* from its shape.
- (0) *z*, *r*, from “*zero*.”

They were also assigned in accordance, as far as possible, with the rules of giving to each digit *one* consonant in common use, and one rare one.

Since *y* is reckoned as a vowel, many whole words, (such as “*ye*,” “*you*,” “*eye*”), may be put in to make sense, without interfering with the significant letters.

Take as an example of this system the two dates of “Israelites leave Egypt—1495,” and “Israelites enter Canaan—1455”:—

“Shout again! We are free!”
Says the loud voice of glee.
“Nestle home like a dove,”
Says the low voice of love.

16.19 Specific Gravities of Metals, &c.

Source: cyclostyled 1877

[Water is taken as the unit. Translate into numbers the last four consonants of the couplet, and place a decimal point in the middle, e. g. Gold = 19.36]

Gold	Would you have enough Gold for your rents? Invest in the seven per cents.
Silver	With Silver the young soldier tip, And with a new sabre equip.
Copper	I bet you a copper that nook Is the place where the salmon broke hook.
Tin	It is merely a question of Tin, Where the wealthier suitor may win.
Lead	Leaden shot had been busy that day, Where many a dead rabbit lay.
Iron	Yes, Iron's the metal, old stoker, To make a superior poker!
Brass	Brass trumpet and brazen bassoon Will speedily mark you a tune.
Mercury	Quicksilver is quicker by far Than the liveliest live rabbits are.
Platinum	Of Platinum's little to spare: It is a commodity rare.
Lithium	From Lithium dread no fatigue, Though a lump you should carry a league.
Glass	Spun Glass will delight girl or boy: Nothing else makes so pretty a toy.
Deal	Yes, Deal is the timber, old mate, To make you a door or a gate.
Cork	This Cork to my shoulders I tie, And all marine terror defy.
Alcohol	For Alcohol cherish a dread; In excess it will injure your head.
Sea-water	Sea-water is held in repute. An invalid's health to recruit.

Gold: 19·36, Silver: 10·47, Copper: 8·88, Tin: 7·29, Lead: 11·35, Iron: 7·80, Brass:
8·39, Mercury: 13·60, Platinum: 23·00, Lithium: 0·59, Glass: 3·33, Deal: 0·93, Cork:
0·24, Alcohol: 0·82, Sea-water: 1·03 (most values deviate more or less from those in
modern tables)

16.20 Logs of Nos.

Source: manuscript, begun June 11, 1877, finished March 26, 1878

from 101 to 109, and from 1001 to 1009

With one grave bow he welcomes me:
But, when I leave the place,
Although requited by a fee,
He leers with crafty face.

Two days, at most, he lets me stay:
Not that he *says* "Don't stop."
He goes to work a surer way,
And slyly works a mop.

Three pence I gave him, half afraid,
And faltered "Worthy sage,
Though not enriched by what I paid,
Prithee abate your rage!"

Four pounds he wanted, but I *knew* it
Was a preposterous fee:
"I will not be a party *to* it!
Bring my receipt to me!

"A fine-pound note? Am I the Mint?
Or is your trade to rob?
I never heed a booby-hint:
Such loss would cause a sob.

"Six months I have travelled unshaven,
(That's exactly one half of a year:)
I have changed from a dove to a raven—
But I will not be shaved, even here!"

"Seven days make a week," say the folk:
For *weakness* malt-liquors avail.
There is not much new in the joke,
But I've always been nurtured on ale.

My eight-oar crew, your breath
Comes thick and short today!
Think not a jot of death!
Your stalwart foe survey!

At nine we'll sup, ye brave!
Nor will it harm our head
One atom, if we save
A glass to take in bed!

Logarithms of 1.01 to 1.09 (last 6 consonants of third lines, with implied 0.0) and of 1.001 to 1.009 (last 5 consonants of fourth lines, with implied 0.00):

$\lg 1.01 = 0.0043218$, $\lg 1.001 = 0.0004341$
 $\lg 1.02 = 0.0086002$, $\lg 1.002 = 0.0008677$
 $\lg 1.03 = 0.0128372$, $\lg 1.003 = 0.0013009$
 $\lg 1.04 = 0.0170333$, $\lg 1.004 = 0.0017337$
 $\lg 1.05 = 0.0211893$, $\lg 1.005 = 0.0021661$
 $\lg 1.06 = 0.0253059$, $\lg 1.006 = 0.0025980$
 $\lg 1.07 = 0.0293838$, $\lg 1.007 = 0.0030295$
 $\lg 1.08 = 0.0334238$, $\lg 1.008 = 0.0034605$
 $\lg 1.09 = 0.0374265$, $\lg 1.009 = 0.0038912$

16.21 Various Memoria Technica Verses

Source: various manuscripts, most undated, some other sources, 1877–1897
(Foundation of Colleges: June 1, 1877 according to diary, but later reconstructed from memory; Date of Easter: unpublished proof sheets, 1897?; Wycliffe: letter, October 14, 1894)

Date of Easter

List my song to!
'Tis as wrong to
Save a flea
As rob a bee.

The consonants of the last two lines give part of the *ah*-table used to calculate the date of Easter by Carroll's method:

Century	21	22	23	24
<i>a</i>	6	5	4	5
<i>h</i>	6	0	1	1

Kings and Queens of England

8 Henrys

Crazy belief we cause to none:
A fact, if dead of a hilly run.

...¹

Anne—Victoria

Poor I die
Hay-time

Execution of Charles

We pardon faults like thine,
Whose ending was so fine.

¹Remark: 6 Edwards, 4 Williams, 4 Georges, 3 Richards, 2 Charles, 2 James, Stephen—John, Mary and Elizabeth omitted for now, as the verses might still be protected by copyright

Cromwell made Protector

Ambition was *thy* fault:
Thine own self to exalt.

Years of enthronisations (all consonants):

Henry I: 1100, Henry II: 1154, Henry III: 1216, Henry IV: 1399, Henry V: 1413,
Henry VI: 1422, Henry VII: 1485, Henry VIII: 1509

Anne: 1702, Victoria: 1837

Execution of Charles: 1649

Cromwell made Protector: 1653

Foundation of Colleges

Brasenose College

With a nose that is brazen
Our gate we emblazon.

Christ Church

Ring Tom when you please:
We ask but small fees.

St John's College

They must have a bevel
To keep them so level.

Brasenose College: 1509, Christ Church: 1546, St John's College: 1555

Other Dates

Battle of Crécy

The string is wet! If so,
Useless is my bow!

Wycliffe's Bible completed

The Bible to translate
Brought Wycliffe nought but hate.

Battle of Crécy: 1346 (first line), Wycliffe's Bible completed: 1383

16.22 Memoria Technica (1888)

Source: typewritten 1888

My “Memoria Technica” is a modification of ¹Gray’s; but, whereas he used both consonants and vowels to represent digits, and had to content himself with a syllable of gibberish to represent the date or whatever other number was required, I use only consonants, and fill in with vowels “ad libitum”, and thus can always manage to make a real word of whatever has to be represented.

The principles on which the necessary 20 consonants have been chosen are as follows:—

- [1] “b” and “c”, the first two consonants in the Alphabet.
- [2] “d” from “duo”; “w” from “two”.
- [3] “t” from “tres”; the other may wait awhile.
- [4] “f” from “four”; “q” from “quatuor”.
- [5] “l” and “v”, because “L” and “V” are the Roman symbols for “fifty” and “five”.
- [6] “s” and “x”, from “six”.
- [7] “p” and “m”, from “septem”.
- [8] “h” from “huit”; & “k” from the Greek “okto”.
- [9] “n” from “nine”; & “g”, because it is so like a “9”.
- [0] “z” and “r”, from “zero”.

There is now one consonant still waiting for its digit, viz. “j”; and one digit waiting for its consonant, viz. “3”: the conclusion is obvious.

The result may be tabulated thus

1	2	3	4	5	6	7	8	9	0
b	d	t	f	l	s	p	h	n	z
c	w	j	q	v	x	m	k	g	r

When a word has been found, whose last consonants represent the number required, the best plan is to put it as the last word of a rhymed couplet, so that, whatever other words in it are forgotten, the rhyme will secure the only really important word.

Now suppose you wish to remember the date of the discovery of America, which is “1492”: the “1” may be left out as obvious; all we need is “492”.

Write it thus:—

4 9 2

f n d
q g w

and try to find a word that contains “f” or “q”, “n” or “g”, “d” or “w”. A word soon suggests itself—“found”.

The poetical faculty must now be brought into play, and the following couplet will soon be evolved:—

“Columbus sailed the world around,
Until America was FOUND”.

¹should be “Grey”

If possible, invent the couplets for yourself: you will remember them better than any made by others.

June, 1888.

16.23 The Electric Pen

Source: cyclostyled 1877

The Electric Pen, with which I am now writing, seems to me to be quite the best thing yet invented for taking a number of copies of M.S., drawings, or maps.

The “pen” consists of a needle, in a holder like a pencil: the needle is worked in and out with enormous rapidity by electricity, & projects just far enough to go through a thin sheet of paper. The result is that every line of the M.S. or drawing consists of a row of minute holes, almost close together. The paper thus prepared (which is called the “stencil”) is placed in a frame with blank paper underneath, & an inked roller is passed backwards & forwards over it: the ink is thus squeezed through the holes, & the little dots, so formed, run together, forming continuous lines.

The writing of the stencil is rather slower than ordinary writing, but the copies are easily worked off at the rate of 2 a minute—probably, with practice, much faster. When as many copies have been worked off as are required at the time, the stencil may be cleaned with methylated spirits of wine, and laid aside for future use.

It is said that 3000 copies may be taken from one stencil.

This writing is not as good as it might be, but I have only had a few days’ practice. I have tried drawing as well, & am delighted with the result.

The pen is a patented invention, & may be had, with battery &c., for 8 guineas, from the Electric Pen Company, 9. New Broad Street, City, London.

*C. L. Dodgson.

16.24 Testimonial

Source: The Edison Electric Pen and Duplicating Press, 1878, untitled entry in Testimonials section of instruction manual

July 11th, 1877.

I have tried the new Electric Pen for writing MS, printing and drawing, and consider it perfectly successful for all three purposes. For simplicity, expedition, and cleanliness in working, it seems to me to be quite unrivalled, and those who, like myself, often require twenty or thirty copies of a paper of questions or formulæ, &c., will save the cost of the machine in printer's bill several times over in a year.

*Charles L. Dodgson.
Mathematical Lecturer of Ch. Ch., Oxford.*

16.25 Is it Well to have Children Vaccinated?

August 18, 1877

Source: The Eastbourne Chronicle, August 18, 1877

By the way, Lewis Carroll was vaccinated on May 14, 1863, and again in September or October 1871.

Sir: A letter, with the signature of “William Hume Rothery,” in your paper of Aug. 4th, contained an argument in proof of the assertion that vaccination increases the liability to small-pox, based on such facts as the following:—That in Berlin, in 1871, of 17,000 small-pox patients, 14,287 had been vaccinated: *i. e.*, 84 per cent. And reducing his other statistics to per centages, we find that in Bavaria, in 1871, the per centage was 95; in London in 1870–72 it was 75; and in Leipzig in 1858–59 it was 92. Now it cannot be too widely known, or too often repeated, that this argument is a fallacy, and that these statistics by themselves prove nothing; we need to know as well what per centage of the population have been vaccinated and then to compare the two per centages together.

Let me illustrate that in some other subject. Suppose a certain city, whose inhabitants are known to be, 80 per cent. of them, church people and the rest dissenters; and suppose a great meeting to be held on the subject of drainage, and that it is found that 80 per cent. of the meeting are churchmen; what would be thought of my argument if I said, “It is clear that drainage is more interesting to churchmen than to dissenters?” Would not anyone answer at once, “Why, that is the proportion through the whole city! The fact that the same proportion occurs in the meeting merely shows that church principles have had nothing to do with it.” But if, in another meeting, it were found that considerably over 80 per cent., say 95, were church people, it would be quite legitimate to conclude that it was a meeting more attractive to church people than to dissenters, or if it were found that only 60 or 70 per cent. were church people, we might fairly conclude that some cause was at work to keep church people away.

Now every word of this is applicable to vaccination. We may fairly assume, I think, that at least 98 per cent. of the population have been vaccinated. Hence, if in a certain hospital we found the same per centage, we should say “Vaccination has no effect in bringing people in or keeping them out.” If we found a larger per centage, we should say “vaccination increases the liability to this complaint.” But if, as in the statistics quoted above, we find that the per centage of vaccinated persons is considerably less among small-pox patients than among the whole population, we may fairly draw the important conclusion that vaccination diminishes the liability to take small-pox.

I heartily wish that these simple facts could be brought to the notice of all members of that well-meaning, but most mischievous association, the “Anti-vaccination League.” Your obedient Servant,

*Charles L. Dodgson,
Mathematical Lecturer of Christ Church, Oxford.
7, Lushington-road.*

September 8, 1877

Source: The Eastbourne Chronicle, September 8, 1877

Sir: I hope you will be able to afford me space for a few words in reply to Mr. Hume-Rothery's letter in your paper of August 25th. He quotes from his previous letter some statistics of the number of vaccinated persons who died in small-pox, which statistics, he says, I have taken "care not to reproduce," implying (as I understand him to mean) that I omitted them in order to make my case look better than it really was. Surely this insinuation of an unworthy motive is a little uncourteous? But whether it be so or not, let me assure him that it is at least unfounded; my only motive for not reproducing those statistics was that they were irrelevant to the subject of my letter. I limited myself to the one question whether vaccination increases or diminishes the liability to take small-pox, and I reproduced the statistics which related to that question. I thought my letter long enough as it stood; otherwise I should have taken the question whether vaccination increases or diminishes the liability to die of small-pox, and have pointed out that the statistics given by Mr. Rothery (the per centage of deaths among vaccinated patients) require to be compared with other statistics (the per centage of deaths among the non-vaccinated) and that by themselves they prove nothing.

But Mr. Rothery further says that I am in error in thinking he used the statistics for any such purpose. "I in no part of my letter attempt," he says, "by the figures he has quoted, or by those he has omitted to quote, or by both together, to prove that vaccination increases the liability to small-pox." I am sorry to have misunderstood him, and can only say that I find in his letter, at the end of the statistics, the words "To this indisputable evidence anyone who desires it may find in England and elsewhere very much of the same nature which may be added, making a mass of testimony against vaccination, &c." Clearly, then, he thinks that the statistics prove something "against vaccination," and if that something is not "liability to small-pox" I am at a loss to know what it is.

I will not attempt to follow Mr. Rothery through the medical portions of his letter; I wrote as a mathematician, not as a doctor, with the object of asserting one single proposition, which is of such vital importance in the vaccination controversy that I gladly take this opportunity of repeating it:—The statistics so constantly quoted by the opponents of vaccination, namely, the per centage of vaccinated persons among small-pox patients, prove nothing, when taken alone, as to vaccination increasing or diminishing the liability to take small-pox; in order to prove anything, they must be compared with other statistics, namely, the per centage of vaccinated persons among the whole population; and, when so compared, they prove that vaccination diminishes that liability. Your obedient Servant,

*Charles L. Dodgson,
7, Lushington-road, Eastbourne,
August 30th, 1877*

September 22, 1877

Source: The Eastbourne Chronicle, September 22, 1877

Sir: Mr. Hume-Rothery has at last supplied the missing link in his argument. In your paper of the 15th he states that, according to recent reports, only two-thirds of the population (which we may call a per centage of 66) have been vaccinated. This differs widely from the 98 which, in the absence of statistics, I had taken as a probable per centage, and the statistics, as now completed,

undoubtedly go to prove that vaccination increases the liability to take small-pox. There is no hiatus in the argument. All depends now on the correctness of the statistics themselves, a matter which I am not qualified to discuss. I do not mean, of course, that this if proved would settle the whole question. Vaccination may still be good, even if it increases the liability to take small-pox, provided it diminishes the severity of the disease, or the pain, or the disfigurement, or the bad consequences, or the risk of death. On all such questions valuable evidence may be got from statistics, if we bear in mind the simple rule that we must compare two per centages together, *e. g.*, as to the severity of the disease, we must compare the per centage of sever cases among vaccinated patients with the per centage among the un-vaccinated.

Mr. Hume-Rothery thinks it "comical" that I should see any discourtesy in the charge he made against me of suppressing evidence (with the implied dishonourable motive of wishing to make my case look better than it really was), and says he was "simply crediting me with the intention to make the best of my case." And he holds that I was equally discourteous in speaking of the League as "well-meaning, but most mischievous" (where I expressly avoided implying any dishonourable motive by introducing the word "well-meaning"). He now makes a new charge against me of "garbling statistics." Perhaps he thinks that here also he is within the bounds of courtesy, and is not implying any dishonourable motive; if so, I can only say that we do not take quite the same view, either as to what is honourable in controversy, or as to what is courteous in language. This is the last letter with which I need trouble you. I did not come forward as a champion in the controversy, but as a critic; and I concerned myself rather with the logical accuracy of the weapons than with the result of the fight. My object in addressing you is fully effected, if I have made it clear (as I hope I have) that the statistics which I quoted from Mr. Hume-Rothery's first letter were useless by themselves, and that the conclusion which he drew from them had no logical force. Your obedient Servant,

*Charles L. Dodgson,
7, Lushington-road,

16.26 Notices to Correspondents (January 1882)

Source: The Monthly Packet, January 1882

‘A TANGLED TALE’—ANSWERS TO CORRESPONDENTS.—I beg to thank BALBUS and CERTAIN FRIENDLY SPIRITS for their communications, and would entreat the latter to abandon their wish, and to make what allowance they can for the feelings of one to whom anything like *personal* publicity is absolutely distasteful. ‘*Digito monstrari, et dicier, Hic est,*’ is doubtless desired, and even sought after, by many; but *my* wishes are all in the opposite direction, and I would prefer as my motto, ‘*Nec vixit malè, qui natus moriensque fefellit.*’ (N.B.—I do not offer the Spirits any translation. In these days young ladies learn *everything*; and ‘everything’ includes Latin.)

16.27 Notes

Source: St. James's Gazette, March 23, 1882

May I (writes "Lewis Carroll") presume to anticipate the *Daily News* in making an announcement which will shake to its centre the whole scientific world? The *Perpetuum Mobile* is discovered! We may confidently expect that a clock will shortly be exhibited which, as often as it runs down, is able to wind itself up again. The discoverer of this marvellous principle—the mere details of construction being trifles that any watchmaker can arrange—is no less a person than Mr. Gladstone, on whose great mind it has dawned, for the first time in the world's history, that a body of men *can confer on themselves* rights, over another body of men which they do not already possess. What he says is, in effect, this:—"We, the Majority of the House of Commons, admit that we have not at present any constitutional right to close a debate against the wish of you, the Minority. We can, however, effect our object by a twofold process. First, we will propose and carry against your wish, a Resolution conferring upon us this right: secondly, we will transfer ourselves from the position of donors to that of recipients, and will proceed to exercise the right we have thus received." That is to say, Mr. Pyke will first introduce Mr. Pluck, and then Mr. Pluck, being regularly introduced, will be qualified to introduce Mr. Pyke. It will not, I hope, be deemed impertinent, while the fate of the First Resolution is yet hidden in the future, to raise the question whether the operation proposed by Mr. Gladstone is either ethically or logically possible.

16.28 Aunt Judy's Correspondence

April

Source: Aunt Judy's Magazine, April 1882

'A Friend' of the Editor's is about to publish a selection of Shakespeare's Plays adapted for the acting of young people up to sixteen or eighteen years of age; and he will be greatly obliged if any readers who have learned by experience which plays are most popular and suitable for this purpose, will send him lists of such plays arranged in succession according to their popularity. All letters to be addressed *X. Z., care of the Editor, 71 Warwick Road, Earl's Court, S. W.*

'Mr. Lewis Carroll' (who advertised last month under the *soubriquet* of 'A Friend') is about to publish a selection of Shakespeare's Plays, adapted for the acting of young people up to sixteen or eighteen years of age, and he will be greatly obliged if any readers, who have learned by experience which plays are most popular and suitable for the purpose, will help him by sending lists of them, arranged in succession according to their popularity.—Address *Care of the Editor, 71 Warwick Road, Earl's Court, S. W.*

16.29 Notices to Correspondents (April 1882)

Source: The Monthly Packet, April 1882

A friend of the Editor is anxious to prepare a 'Shakespeare for Girls,' fit to be unhesitatingly placed in all hands in 'Shakespeare Readings.' He would be obliged if persons would send the Editor—to be forwarded to him—lists, drawn up from memory or experiment, of the plays that have been found most to interest young people.

16.30 Note about “Shakespeare for Girls”

Source: The Monthly Packet, June 1882 (untitled, after the *Tangled Tale*)

The Editor kindly allows me a little extra space to make a request to my lady readers. I am thinking of trying whether a selection of Shakespeare’s Plays can be produced, in which many of the beauties should be preserved, and yet the whole made so absolutely free from objectionable matter, whether in plot or language, that any English mother might, without scruple, put it into the hands of her daughters from the age of 10 or 12 up to 16 or 18. Younger girls would not be likely to understand or appreciate the greatest of poets: and older ones may safely be left to read Shakespeare in any edition, expurgated or not, they may prefer: but it seems a pity that so many children should be debarred from a great enjoyment for want of an edition suitable to them. Neither Bowdler’s, Chambers’, Brandram’s, nor Cundell’s ‘Boudoir’ Shakespeare, seems to me to meet the want: they are not sufficiently expurgated to suit children.

I hope to produce a cheap and handy volume, containing about 15 plays, and shall be much obliged to any lady who will send a list (founded on recollections of her own girlhood, or on observation of her daughters’ reading) of the plays she thinks suitable. When there are several ladies in one family, if each would draw up an *independent* list, each such list would have its own value as a separate piece of evidence. And a list arranged *in order of merit* would be even more useful: but this, I fear, would entail some trouble. Mistresses of girls’ schools could give, probably, more information than any private individual as to which plays are most liked by girls.

Lewis Carroll

16.31 The Profits of Authorship

Source: probably printed 1884, only one paragraph available

The publisher contributes about as much as the bookseller in time and bodily labour, but in mental toil and trouble a great deal more. I speak with some personal knowledge of the matter, having myself, for some twenty years, inflicted on that most patient and painstaking firm, Messrs. Macmillan and Co., about as much wear and worry as ever publishers have lived through. The day when they undertake a book for me is a *dies nefastus* for them. From that day till the book is out—an interval of some two or three years on an average—there is no pause in “the pelting of the pitiless storm” of directions and questions on every conceivable detail. To say that every question gets a courteous and thoughtful reply—that they are still outside a lunatic asylum—and that they still regard me with some degree of charity—is to speak volumes in praise of their good temper and of their health, bodily and mental. I think the publisher’s claim on the profits is on the whole stronger than the bookseller’s.

Quoted from *King Lear* by William Shakespeare

In connection with this, advertisements for Carroll’s books contained the following note (here from *A Tangled Tale*):

N.B. In selling the above-mentioned books to the Trade, Messrs. Macmillan and Co. will abate 2*d.* in the shilling (no odd copies), and allow 5 per cent. discount for payment within six months, and 10 per cent. for cash. In selling them to the Public (for cash only) they will allow 10 per cent. discount.

16.32 Mr. Gladstone's New Book¹

Source: The St. James's Gazette, March 21, 1885; authorship not entirely certain

In the first six volumes of this eagerly awaited work Mr. Gladstone leads up to his subject. Vols. i. to iii. consist of prefatory matter, in which the indefatigable author explains the lines on which he proposes to work, and in vols. iv. to vi. he revises. The treatise, which, when it is completed, will form a handsome library in itself, is dedicated to the late Gabriel Harvey, "as a slight token of admiration for a writer whose MSS. broke the wheels of a carrier's cart." To judge the book at present would be manifestly unfair; but we cannot think these six introductory volumes unworthy of their author's reputation.

Mr. Gladstone defines logic as "the art of explaining that it is all right," and he then hastens to point out (pp. 42–118, vol. i.) the inadvisability of using definitions at all. "For the meaning of a word or term," continues our author, "is that which we think about when we use another word or term; and no word or term has the same signification (or connotation) in one proposition that it has in another." Mr. Gladstone cites numerous examples. "When I use the word 'retire,'" he says, "in reference to a Government's policy, I may mean 'annex.'" Again, "The term 'atrocities,' when applied to certain persons and certain regions, connotes blood-guiltiness; applied to others it may imply, if it has any connotation at all, butchery for the ultimate advantage of the butchered."

Want of space prevents us dwelling at length on Mr. Gladstone's second volume, which is, perhaps, the most suggestive of the series, so far as it has gone. It may be briefly described as a caution against taking vol. i. too literally; "for all written or spoken statements must be considered in their relation to current events." Of the conversion of propositions Mr. Gladstone says little (pp. 15–182, vol. iii.) at present, holding this part of his subject too important for treatment in introductory volumes. He, however, makes merry over so-called "limited conversion." "Conversion," says Mr. Gladstone emphatically, "is unlimited;" and he adds, by way of caution to beginners, "it is well when you employ an affirmative proposition to explain that you use it in its negative sense."

After a noble but somewhat discursive peroration, Mr. Gladstone briefly states his rules of the syllogism (pp. 312–407). It will surprise no one that these differ from the views on the subject held by Whately; for Mr. Gladstone's work is sufficiently original to upset the old-fashioned Aristotelian theories of reasoning altogether. The new rules of the syllogism are five in number, and are stated in five sentences occupying two pages apiece. Each word is explained at length in brackets; but, with these reluctantly omitted (for the sake of brevity), the rules stand thus:—

(1) *A syllogism must contain not less than four terms.* "Three terms," says our author, "sufficed for Aristotle and his contemporaries; but in these days of complexity we cannot do with less than four." It is to be noted that Mr. Gladstone does not confine the syllogism to four terms. "Five," he adds in an appendix, "are sometimes employed with effect; and it is worth remembering that by varying your connotations you really increase the number of your terms." This is the example given:—

¹"The Elements of Logic." By W. E. Gladstone, M.P., Author of "Homer and the Homeric Age," etc. Vols. I. to VI. (London: Eyre and Spottiswoode.)

The English Government is responsible for Egyptian affairs.
 But the late Conservative Government was an English Govern-
 ment.
 ∴ The late Conservative Government is responsible for Egyptian
 affairs.

As Mr. Gladstone truly observes, “there seems something wrong about this syllogism when thus baldly expressed; but there can be no doubt of its validity when stated at proper length.” The author then proceeds to prove in a masterly dissertation (pp. 480–601) that the Conservatives are to blame for the imbroglio in Egypt.

A syllogism (says Rule 2) must similarly consist of not less than four propositions; “for plainly we can draw more deductions from four propositions than from three;” e. g.:—

To pour out our best blood for our country is noble.
 Gordon’s was our best blood.
 I poured it out.
 ∴ I am noble.

“But there are some terms,” we learn from a foot-note, “apt to lead to confusion and ambiguity. This word ‘Gordon’ is one of them, and I would be glad to see it expunged from the language.”

Passing over Rule 3—which, “though you would hardly think it,” is only Rule 2 in disguise—we reach the fourth rule: *If we are told a little about the terms in the premisses, we are entitled to infer a great deal more in the conclusion.* The last rule is a beautiful exposition of the doctrine that “from two negative premisses anything can be inferred.” For example:—

A Government with a policy cannot do as it is told.
 Not to obey other Governments is to be independent.
 But we have no policy.
 ∴ We can do as we are told.

Mr. Gladstone prefaces his remarks on the hypothetical syllogism with the truism that “we must first take for granted whatever we want to prove, and should always prove one thing by arguing about another.” And in another place he says, “Often an important premiss is not stated but merely conceived in the mind.” As thus:—

The noble Arabs fight for liberty.
 How noble a thing is liberty!
 ∴ We slay the Arabs.

“The hidden premiss,” continues our author, “is extremely useful, and it is difficult to see how we could get on without it.” It is not, however, a subject on which Mr. Gladstone dwells very long.

Vols. iv. to vi. may be best regarded as a commentary on the preceding volumes. “I have laid down my plan of procedure,” Mr. Gladstone explains, “at considerable length and with great caution; for I have not yet *absolutely* determined what my plan of procedure is to be. If I have anywhere left a statement unguarded by a qualifying phrase, such error is owing to want of careful revision. Wherever my assertions are contradictory it must be understood that in

the one I express my own opinion, subject to explanations, and in the others the opinions of other persons. At the present stage of the work I cannot undertake to decide which are my opinions; but wherever a syllogism is given in Barbara it will be advisable to convert it at once into Camestres. This will leave my original statement unchallenged, besides affording wholesome exercise for the student, and the result, of course, will in all cases be the same."

Mr. Gladstone's sixth volume concludes in the middle of a most interesting chapter on "the suicidal policy of using one word when two will do as well." "Every additional word," argues the author eloquently, "is an additional loophole of escape; and, indeed, by a judicious blending of terms the logician can always unsay in one sentence what he said in the preceding one."

We have frequently had occasion to question the utility of Mr. Gladstone's services as a statesman, but it would be ungenerous to deny that there is much thought-compelling matter in his latest work. There is no sham about it, the author laying bare the working of his mind for the benefit of a generation soon, to soon, to come after him; and so honest a book is far on its way to being a great book. There is much in it that may fairly be called biographical. The Premier has been fortunate in his publishers, though cloth binding is perhaps desirable. The volumes are issued in stiff blue paper covers that do not seem unfamiliar, and the general get-up of the work is excellent. We notice a few misprints, but these will doubtless be corrected in the second edition; to the reviser we may suggest that sentences of more than one page in length are apt to confuse.

16.33 Too Many Dogs

Source: The Standard, April 10, 1885

To the Editor of The Standard

SIR,—I trust the advocates of the diminution of the number of pet Dogs will not be deterred from their useful efforts by any outcry about their want of sympathy with a noble animal, or even by the charge of discourtesy to ladies, in adopting St. Paul's phrase, "silly women"! The Dog at his best is noble indeed; and has some human virtues—such as unselfishness and forgiveness of injuries—in a degree that few men ever attain to. The Dog, at his worst, the overfed and ill-tempered pet that ladies delight in, is about as mean a thing as the animal race has to show.

Quoted from 2
Timothy 3:6

As to this danger of personal suffering, and even of the terrible maledy hydrophobia, that this increasing craze for pet Dogs entails on all friends of the crazy owners, I can speak feelingly. Twice, after calling on lady friends, I have been attended down the gravel-walk by a savage Dog, and have only escaped a severe bite by the thickness of cloth trousers—the cloth itself being torn to rags: and twice, in the drawing-rooms of lady friends I have been attacked by a pet Dog—the Dog being, on one occasion, in the first stage of rabies, which necessitated its being shot the same afternoon. But what I wish to speak of now is the enormous waste of human food caused by this excessive *cultus* of pet Dogs.

No doubt the philo-doggist will plead "It is, in each particular case, so small a quantity. It is but the crumbs that fall from the rich man's table!" Well, but add up the sum-total of those crumbs throughout the land, and see how many poor people, who are at their wits' end to keep body and soul together, they would provide for. And if it be urged "how are the needy mouths and the food be brought together?" one can but reply, "If you took half the pains to find out the hungry paupers that surround you which you take to pamper the bloated pets that monopolise all your attention, you would not find you had many crumbs to spare!"

If, by opening your columns to this subject, you can lead the way to a heavier Dog-tax, to the diminution of Dog Shows, or to any humane expedient for reducing the plague of Dogs, you will have done a good deed.

I am, Sir, your obedient servant,

Lewis Carroll.

April 9.

16.34 Hydrophobia Curable

Source: The St. James's Gazette, October 21, 1885

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—As I see that some of your correspondents assert hydrophobia to be absolutely incurable, I enclose an extract from Dr. Tuke's book, which I hope may furnish some comfort to any of your readers who are nervous on the subject. Here however, preëminently, "prevention is better than cure," and an increased dog-tax, with a greater diligence in shutting up all dogs found wandering without owners, are perhaps the best available means for meeting the danger.—I am, Sir, your obedient servant,

Lewis Carroll.

October 19.

"At a séance of the Royal Academy of Medicine of Paris, Dr. Barthélemy expressed his conviction that the symptoms of hydrophobia in man were mainly due to the imagination and irritability of the patient. In proof of this he adduced his own case. He had introduced his finger into the throat of a mad dog, and drew it out covered with frothy saliva; in drying it he observed that he had a slight excoriation on his finger. He lightly cauterized it, but, ten days after, he experienced a sense of constriction about the throat. He felt alarmed; the difficulty of swallowing increased until he could not drink anything, and the sight of water caused spasms. The Will, however, was strongly exercised, and at last gained the day; the symptoms gradually abated, and in about a week he was well.

"An event in the life of Andrew Crosse, the electrician, illustrates, in a striking manner, the power of the Will over threatened disease, the symptoms in his case being those of hydrophobia. It would seem to illustrate the force of this influence, not only directly over the incipient irregular action of certain motor nerves and muscles, by forcing them into healthy exercise, but over the automatic action of the cerebrum itself, by resolutely arresting the train of ideas which have been excited. If 'an act of the Will frequently excites such changes in the brain as to arrest an incipient paroxysm of angina pectoris or epilepsy' (Laycock), there seems no reason why it should not exert the same influence over the symptoms present in this case.

"Mr. Crosse was severely bitten by a cat, which died the same day hydrophobic. He appears to have thought little of the circumstance, and was certainly not nervous or imaginative in regard to it. Three months, however, after he had received the wound he felt one morning great pain in his arm, accompanied by extreme thirst. He called for a glass of water. The sequel will be best told in his own words:—'At the instant that I was about to raise the tumbler to my lips, a strong spasm shot across my throat; immediately the terrible conviction came to my mind that I was about to fall a victim to hydrophobia, the consequence of the bite that I had received from the cat. The agony of mind I endured for one hour is indescribable; the contemplation of such a horrible death—death from hydrophobia—was almost insupportable; the torments of hell itself could not have surpassed what I suffered. The pain, which had first commenced in my hand, passed up to the elbow, and from thence to the shoulder, threatening to extend. I felt all human aid was useless, and I believed that I must die. At length I began to reflect upon my condition. I said to myself, either I shall die or I shall not; if I do, it will only be a similar fate to that which many have suffered, and many more must suffer, and I must bear it like a man; if, on the other hand, there is any hope of my life, my only chance is in summoning my utmost resolution, defying the attack, and exerting every effort of my mind. Accordingly, feeling that physical as

well as mental exertion was necessary, I took my gun, shouldered it, and went out for the purpose of shooting, my arm aching the while intolerably. I met with no sport, but I *walked the whole afternoon, exerting, at every step I went, a strong mental effort against the disease.* When I returned to the house I was decidedly better; I was able to eat some dinner, and drank water as usual. The next morning the aching pain had gone down to my elbow, the following it went down to the wrist, and the third day left me altogether. I mentioned the circumstance to Dr. Kinglake, and he said he certainly considered that I had had an attack of hydrophobia, which would possibly have proved fatal had I not struggled against it by a strong effort of mind.”

16.35 ‘Game of Logic’

Source: Ad Lucem, July 1887

Examination Paper done June 15, 1887

Out of the 23 girls, who have done this paper, I have selected 8, who are fairly ready to go on with harder work; their names I will give in order of merit:—

1. Caroline J. M. Hubback
2. J. Bessie Wieppert
3. Maggie Earle
4. { Millicent C. Bigg
Mabel L. Newton
6. { Philippa Fletcher
Grace E. McKinnell
Olive Marshall

After these I have selected 6, whom I would be happy to go on with, if they are willing to go over some of the old work again, before trying anything harder; their names I will give in alphabetical order:—

Florence M. Gillespy
Mildred M. Jotcham
Winifred M. C. Pickard
Winifred E. L. Stevens
Freda Stevenson
Adelaide E. L. Whigham

The others I would *advise* (but I do not *insist* on it) not to attend more lectures at present, as I am sure they can spend their time more profitably in other ways.

Charles L. Dodgson

16.36 Tristan d'Acunha

Source: St. James's Gazette, April 16, 1888

To the EDITOR *of the* ST. JAMES'S GAZETTE

SIR,—Will you kindly grant me space, in your columns, to ask if any clergyman, who takes in the *Guardian*, would bestow his copy, when done with, on my brother, the Rev. E. H. Dodgson, who is "Priest in Charge" in the lonely island of Tristan d'Acunha, 1,200 miles from the nearest land—S. Helena. Communications between S. Helena and Tristan are "few and far between," and my brother lives almost as if in another planet, so little does he hear of what goes on in the busy world he has left in order to devote himself to the spiritual needs of these poor islanders. When any vessel does go, it of course takes whatever letters etc. have accumulated for him at S. Helena: and a batch of old *Guardians* would be very welcome to him, even if months old when they reach him.

If any brother-priest will do him this service, I shall be grateful for a line, addressed to me at Oxford, that I may arrange with him as to where, and when, the papers should be sent.—I am, Sir, your obedient servant, *Charles L. Dodgson.*

Christ Church, Oxford, April 14.

16.37 Authors of Epigrams Wanted

Source: Notes and Queries, July 27, 1889

Answered September 7, 1889,

<https://academic.oup.com/nq/article/s7-VIII/193/193/4441108>

Can any of your readers give me the names of the authors of the following epigrams?—

Si placeat brevitās, hoc breve carmen habe.

“Femina dux facti: facti dux femina—” “Quid tum?” “Quid tum?
Tum facti femina dux fuit.” “O!”

C. L. Dodgson

16.38 “Life on a Lonely Isle of the Sea.”

Source: St. James's Gazette, November 13, 1889

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—In case any of your readers should feel any interest in the paragraph, with the above heading, which appears in your columns this evening, it may be worth while to correct a few inaccuracies in Captain Fearon's account of the people, and of my brother, the Rev. E. H. Dodgson, who is “priest in charge,” of the island of Tristan d'Acunha.

So far from having to “eke out an existence,” they have plenty of meat and vegetables; and some of them may even be called “wealthy.” The chief drawback is that wheat will not grow there; and, as there are sometimes long intervals without vessels touching there, they are liable to exhaust their supply of flour. My brother has been there for three years, not eight; and, so far from its being “without fee or reward,” he has received, during those three years, two handsome donations from the S.P.G.; from whom also he received, during a previous sojourn at the island, a regular annual stipend.

It is true that the Government send a man-of-war once a year, to report on the condition of the people, but this is anything but “their only communication with the outer world;” many ships touch there in the course of the year.

One sufficient objection to their being removed “to a more favoured region,” is that they would have to go as *paupers*, as their wealth consists almost entirely of live stock, whose conveyance to any other country would cost more than the value of the stock.—I am, Sir, your obedient servant,

*Charles L. Dodgson,
Christ Church, Oxford.
November 12.*

16.39 The Fasting Man

Source: St. James's Gazette, April 10, 1890

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—In connection with the question, naturally raised by the performance now going on, as to how far abstinence from solid Food, but not from Water, deserves the name of "Fasting," the following quotations may be of interest to your readers.

"Our classification of Food falls under two main divisions—Inorganic and Organic Substances; and, doubtless to the reader's surprise, the Inorganic turns out to be the *more* important of the two. We are not, indeed, accustomed to consider minerals as food, or Water as highly nutritious; but that is because we are not accustomed to consider the subject with the needful accuracy. Tell the first man you meet that Water is on the whole more nutritious than roast-beef, and it is probable that he will throw anxious glances across the street to assure himself that your keeper is at hand. Make the same statement to the first man of science you meet, and the chances are that he will think you very ignorant of organic chemistry, or that you are playing with a paradox. Nevertheless, it is demonstrably true, and never would have worn the air of a paradox, if men had steadily conceived the nature of an alimentary substance. *That* is an aliment which nourishes; whatever we find in the organism, as a constant and integral element, either forming part of its structure, or one of the conditions of vital processes, that, and that only, deserves the name of aliment. If 'to nourish the body' means to *sustain its force* and *repair its waste*—if food enters into the living structure—and if all the integral constituents of that structure are derived from food—there can be nothing improper in designating, as nutritious, substances which have an enormous preponderance among the integral constituents. People who think it paradoxical to call Water 'Food,' will cease their surprise on learning that water forms two-thirds of the living body."—Lewes's "Physiology of Common Life," Vol. I., p. 96.

"Surely the only real test of the alimentary character of any substance, is its power to support life for a longer period than it could subsist if deprived of all external help. Let us see how this principle would work. The most important food would then be Oxygen. Next to Oxygen we should rank Water, without which large mammalian animals perish within three or four days, but with a supply of which, in addition to the atmosphere, the want of other food may be sustained for many days, without the occurrence of fatal inanition."—Anstie's "Stimulants and Narcotics," p. 268.

I am, Sir, your obedient servant,

Lewis Carroll.

16.40 Eight Hours Movement

Source: The Standard, August 19, 1890

To the Editor of the Standard

SIR,—Supposing it were the custom, in a certain town, to sell eggs in paper bags at so much per bag, and that a fierce dispute had arisen between the egg vendors and the public as to how many eggs each bag should be understood to contain, the vendors wishing to be allowed to make up smaller bags; and supposing the public were to say, “In future we will pay you so much per egg, and you can make up bags as you please,” would any ground remain for further dispute?

Supposing that employers of labour, when threatened with a “strike” in case they should decline to reduce the number of hours in a working day, were to reply, “In future we will pay you so much per hour, and you can make up days as you please,” it does appear to me—being, as I confess, an ignorant outsider—that the dispute would die out for want of a *raison d’être*, and that these disastrous strikes, inflicting such heavy loss on employers and employed alike, would become things of the past.

I am, Sir, your obedient servant,

Lewis Carroll.

16.41 The Cab-Runner Nuisance

Source: The Standard, September 4, 1890

To the Editor of The Standard

SIR,—A letter on this subject signed “C. C.,” in *The Standard* of to-day, contains these words:—“In a case like this the police are of no assistance. They cannot be got at in time.” May I take this opportunity for making public a remedy which has occurred to me for this “intolerable nuisance,” as “C. C.” rightly calls it?

If the police themselves would take up the matter, my “plan of campaign” would, I feel sure, work splendidly, and would afford, to any ardent lover of sport, all the excitement of duck-hunting with “decoys.” The *modus operandi* would be as follows:—Having chosen a convenient house in a quiet neighbourhood, conceal therein a couple (say) of stalwart policemen, so posted as to be able, themselves unseen, to see and hear all that goes on outside. Meanwhile, a cab, with a tempting amount of luggage on the roof, and containing, as “decoy-ducks,” a couple of seemingly feeble old ladies, is slowly driving along a neighbouring thorough-fare, the cabman having instructions to keep to the main streets till he finds that he has one or two “cab-runners” in pursuit, and then to go at once to the house indicated. A respectable man emerges, takes charge of the boxes, and politely declines the assistance of the cab-runners. The rest of the scene needs no description.

But, even without the assistance of the authorities, much good may be done, and much fine sport obtained, by private enterprise. When a couple of genuine “feeble old ladies” are coming to town with a quantity of luggage, let them previously arrange to have two men awaiting their arrival; one, the “decoy,” to emerge from the house and take charge of the luggage: the other, a man of strength and courage, concealed (to avoid all appearance of collusion) in the next house, who is not to appear until the fun has become “fast and furious,” and is then to lounge out with the casual inquiry, “What’s all this about?” “Mind yer own business!” growls the angry cab-runner. “Mind yours!” retorts the man of nerve and muscle. “And just let go o’ that there box!” Here, again, the rest of the scene may be left to the reader’s imagination. As a point of law, I believe, it would only be necessary for the strong man to exercise forbearance till he had received one blow from the cab-runner. He would then be legally free to return it, with interest at the rate of ten, or even twenty per cent., should he feel so disposed.

I am, Sir, your obedient servant,

Lewis Carroll.

Shanter* by Robert
Burns

16.42 Nyctograph

Source: *The Lady*, October 29, 1891 (as part of the *Syzygy* column)

I cannot give any Lists of Marks or Answers to Correspondents this week, so will take this opportunity for describing my recent invention for writing in the dark, which arose from the need of recording *Syzygy-Chains* invented when lying awake at night, but which will, I hope, serve a far more important purpose, by enabling blind people to write letters, &c., without having to dictate them to others.

I think of calling the mechanical appliance which my system requires, in addition to an ordinary "indelible" memorandum-book, the "Nyctograph." I invented it September 24th, 1891, but I do not intend to patent it. Any one who chooses is welcome to make and sell the article.

Any one who has tried, as I have often done, the process of getting out of bed at 2 a. m. in a winter night, lighting a candle, and recording some happy thought which would probably be otherwise forgotten, will agree with me that it entails much discomfort. All I have now to do, if I wake and think of something I wish to record, is to draw from under the pillow a small memorandum book, containing my Nyctograph, write a few lines, or even a few pages, without even putting the hands outside the bed-clothes, replace the book, and go to sleep again.

There is an ingenious machine already made and sold (I bought mine from Messrs. Elliott, 101, St. Martin's Lane), where you write a line of MS. inside a narrow oblong opening, then turn a handle till you hear a click; this shifts the paper upwards and gives a fresh surface for another line of MS. I tried to put this into a more portable shape, by cutting a series of oblong apertures in a piece of pasteboard the size of a page of a small memorandum book; but the writing is apt to be illegible, as it is difficult to know where you are, and you constantly come against the edge of the aperture when you wish to go further in order to make the loop of an "h" or the tail of a "y." Then I tried rows of square holes, each to hold one letter (quarter of an inch square I found a very convenient size), and this proved a much better plan than the former; but the letters were still apt to be illegible. Then I said to myself "Why not invent a square alphabet, using only dots at the corners, and lines along the sides?" I soon found that, to make the writing easy to read, it was necessary to know where each square began. This I secured by the rule that every square-letter should contain a large black dot in the N. W. corner. Also I found that it would cause confusion to have any symbol which used only the W. side of the square. These limitations reduced the number of available symbols to 31, of which I selected 26 for the letters of the alphabet, and succeeded in getting 23 of them to have a distinct resemblance to the letters they were to represent.

Think of the number of lonely hours a blind man often spends doing nothing, when he would gladly record his thoughts, and you will realise what a blessing you can confer on him by giving him a small "indelible" memorandum-book, with a piece of paste-board containing rows of square holes, and teaching him the square-alphabet. The crowning blessing would be that, instead of having to dictate letters to his attendant, he could write them himself, and no one need see them except those to whom they were written. In the following list, I call the N. E. corner "2," the S. W. corner "3" and the S. E. corner "4." Also I have

bracketed letters whose symbols run in pairs, each being the reverse of the other.
Every symbol is assumed to have a large dot in its N. W. corner.

	Corners	Sides	Resemblance to letters, &c.
A	4	none	right-hand side of "A"
B	2, 4	W	vertical line of "B," with dots to stand for the semicircles.
{ C	none	N, W, S	obvious
{ D	"	N, E, S	obvious; also reversal of preceding symbol
E	"	N	top of "E"; taken as simplest symbol for commonest letter
{ F	4	N, W	obvious; dot stands for cross-piece which has fallen off
{ G	2	W, S	analogous to symbol for "C"; also reverse of preceding symbol
H	none	W, E	obvious
I	"	S	like "i," vertical line having fallen down
J	"	E, S	like "j," dot having slipped to one side
K	4	W	vertical line, and foot, of "K"
L	none	W, S	obvious
{ M	"	N, W, E	like "m," with centre vertical erased
{ N	"	W, E, S	reverse of preceding symbol
O	"	N, W, E, S	obvious
{ P	2	W	vertical line of "p," with dot to stand for semicircle
{ Q	none	E	vertical line of "q," with dot to stand for semicircle; also reverse of preceding
R	3	N, E	lower part of "R"
{ S	none	N, W	like old-fashioned "S"
{ T	"	N, E	left-hand part of "T"; also reverse of preceding symbol
U	2	none	tops of "U"
V	2, 4	"	corners of "V"
W	2	S	like two "V" symbols, with lower corners connected by a line
{ X	3	N	no likeness claimed
{ Y	4	N	ditto, but is reverse of preceding symbol
Z	none	N, S	upper and lower lines of "Z"
"figures"	2, 3	none	corners of "F"; means "symbols will now represent figures"
"date"	2, 3, 4	"	corners of a square "D"; means "next 6 symbols will represent date, 2 stand
"letters"	3, 4	"	corners of "L"; means "symbols will now represent letters again"
"and"	3	E	symbol for A put upright; and right-hand portions of symbols for "N" and "E"
"the"	3, 4	N	upper portion of symbol for "T"; feet of symbol for "H," and symbol for "E"

When the symbols are to represent figures, they should be the symbols for
10 of the letters, as follows:—

Number	Letters	Reasons for Selection
1	B	first consonant
2	D	initial of "duo" and "deux"
3	T	initial of "three"
4	F	initial of "four"
5	L	means "50" [in Roman numerals]
6	S	initial of "six"
7	M	final of "septem"
8	H	initial of "huit" [French for "eight"] also resembles "8"
9	N	initial of "nine"
0	Z	initial of "zero"

These 10 letters are a portion of my “Memoria Technica,”¹ in which (by assigning 2 consonants to each digit, and assigning no meaning to vowels and “Y”) I can always represent any date, or other number, by a *real* word: the other 10 consonants being as follows:—“1, C; 2, W; 3, J; 4, Q; 5, V; 6, X; 7, P; 8, K; 9, G; 0, R.” There are reasons for selection in all these pairs, except “3, J,” which had to pair off as the sole survivors.

Parodies on real images

Sir J. Reynolds. Painter.

P. Joupeat. Engraver.

The Age of Innocence.
from the picture in the Vernom Gallery.

that elaborate care for which M^r Herring is so famed, and the picture on the whole is one of his best.

“The Woodland Gait”

W. Colling. Painter.

C. Cousen. Engraver.

The Woodland Gait.
from the picture in the Vernom Gallery.

This charming picture represents a country dance: the intention of the painter is to portray rustic manners, untaught and unpolished; in this aim he has succeeded admirably, for surely no one would suppose either of the couple in the foreground had ever figured at a London ball.

The little man, bounding up at least a foot from the ground, evidently prides himself a good deal on his agility, but his partner, if one may judge by the smirk on her face, considers her own style of dancing more elegant and graceful. There is an expression of energy in the fiddler's face as though he threw his whole life into the fiddle bow, and the languishing flute-player is evidently some would-be Mozart,⁴ whom the bad taste and bad ear of his unmusical neighbours has hitherto prevented from rising into celebrity. The rustic gait of all the four figures is, in our opinion, admirably depicted.

Quoted from *Elegy
Written in a Country
Churchyard* by
Thomas Gray

4

“Some mute inglorious Milton here may rest,
“Some Cromwell, guiltless of his country's blood.”

Gray's *Elegy*.

“The First Earring”

Sir D. Wilkie. Painter.

W. Greatbach. Engraver.

The First Earring.
from the picture in the Vernom Gallery.

The scene from which this excellent picture is painted is taken from a passage in the autobiography⁵ of the celebrated Sir William Smith⁶ of his life when a schoolboy: we transcribe the passage: “One day Bill Tomkins⁷ and I were left alone in the house, the old doctor being out: after playing a number of pranks Bill laid me a bet of sixpence that I wouldn’t pour a bottle of ink over the Doctor’s cat. *I did it*, but at that moment old Muggles came home, and caught me by the ear as I attempted to run away. My sensation at the moment I shall never forget: *on that occasion I received my first earring*.⁸ The only remark Bill made to me, as he paid me the money afterwards was, “I say, didn’t you just howl jolly!”” The engraving is an excellent copy of the picture.

⁵a man’s history of his own life.

⁶the author of “the Bandy-legged Butterfly.”

⁷afterwards President of the Society for the prevention of Cruelty to Animals.

⁸or a pulling by the ear.

“The Wooden Bridge”

Sir A. W. Calcott. Painter.

J. C. Sentley. Engraver.

The Wooden Bridge.
from the picture in the Vernom Gallery.

A very few words will suffice to explain the meaning of this charming picture. Four ploughboys are trying to force an obstinate pig across a wooden bridge: the hands of a fifth are just visible at the edge of the picture. It appears either the height of cruelty or insanity to expect it to walk⁹ across on one leg. This however they do not seem to have sufficiently considered, and the consequence is they are taking a great deal of trouble with scarcely a hope of success. It is scarcely possible for the unhappy creature to stand, much less to progress a single inch, until one or more of its legs are released. The fourth figure appears as if he would prefer no help at all in pulling to the help he is receiving.¹⁰ The one who is pushing is evidently much of the same opinion. The trees, the cottage, and the setting sun in the background produce a fine effect.

⁹the word “walk” implies the use of more legs than one. The only way it could possibly advance would be hopping.

¹⁰viz. by the hair.

“High Life and Low Life”

E. Landser. Painter.

H. Beckwith. Engraver.

High Life and Low Life.
from the picture in the Vernom Gallery.

Never was the name of a picture more fully borne out in the picture than in this. The face of the boy suspended on the wall, representing “High Life,” is positively exquisite¹¹: we have rarely seen anything more true to nature. One can trace in it, besides fear of the approaching gardener, a shade of sorrow and regret for the basket of apples¹² he has just dropped. His companion however, whose face is just visible from under the basket, probably feels more *real* sorrow for that event. This last, the reader will of course perceive, is meant to represent “Low Life.” The gardener is admirably drawn, but the potatoe beds and gravel walk are rather inferior to the artist’s usual style. On the whole, however, the picture does him great credit.

¹¹i. e. expressing exquisite pain.

¹²probably Lemon Pippins.

“The Duett”

W. ETTY. R.A. Painter.

A. BELL. Engraver.

The Duett.
from the picture in the Vernom Gallery.

This charming picture is intended to represent three true lovers of music; for though the boy on the left is taking no part in the performance, yet there is a fire in his eye which forbids us to think him an inattentive or unadmiring listener. The most casual observer cannot fail to remark what a tendency the love of music has to make the hair grow in full luxuriance, nay, he may safely conclude, if he finds no such effect produced in *him*, that he has no ear for melody. A further proof of the lady's great musical taste is that she is producing the most mellow strains from a pair of common kitchen bellows¹³: the song they are singing my readers have no doubt often heard.

¹³this, in point of fact, is the only instrument by means of which a brisk air can be produced. It's use requires a strict attention to the bars.

Part 18

Poems

This part contains all poems by Lewis Carroll I could find. It also includes poems extracted from his stories (except those poems that he only quotes, and are not by him; and except for very short verses, especially Memoria Technica verses like *Specific Gravities of Metals* (→ 16.19, p. 1961). When there is more than one version (not counting just differences in punctuation etc.), all versions are collected here. The titles for poems without original title are derived from the surrounding text, or just the incipit. The poems are in alphabetical order of their first words (ignoring any introductions, even the introduction of *Hiawatha's Photographing*), so you can find a poem when you know how it starts, with one exception: The poem starting with “I watch the drowsy night expire” is found among “T”, because the later version starts with “The night creeps onward, sad and slow” (*Faces in the Fire*, → 18.159, p. 2351).

18.1 A boat, beneath a sunny sky

Source: Through the Looking Glass (dedication)

A boat, beneath a sunny sky,
Lingering onward dreamily
In an evening of July—

Children three that nestle near,
Eager eye and willing ear,
Pleased a simple tale to hear—

Long has faded that sunny sky:
Echoes fade and memories die.
Autumn frosts have slain July.

Still she haunts me, phantomwise,
Alice moving under skies
Never seen by waking eyes.

Children yet, the tale to hear,
Eager eye and willing ear,
Lovingly shall nestle near.

In a Wonderland they lie,
Dreaming as the days go by,
Dreaming as the summers die:

Ever drifting down the stream—
Lingering in the golden gleam—
Life, what is it but a dream?

Other version:
→ 18.89, p. 2174

Acrostic: Alice Pleasance Liddell

18.2 Examination Statute

Source: printed 1864

A list of those who might, could, would, or should have voted thereon in Congregation Feb. 2, 4681, arranged alphabetically:—

A is for, who'd physic the Masses,
B is for, who swears by the gases:
C is for, constant to Horace,
D is for, who integrates for us.
E is for, with rifle well steadied,
F is for, Examiner dreaded!
G's, by the "Saturday" quoted,
H is for, to "Margaret" devoted.
I am the Author, a rhymers erratic—
J is for, who lectures in Attic:
K is for, than attic much warmer,
L is for, relentless reformer!
M is for, our Logic-provider,
And is **N**, once a famous rough-rider.
. 's **O**, Orthodoxy's Mendoza!
And is **P**, the amendment-proposer.
Q is the Quad, where the Dons are collecting,
R is for, who lives for dissecting:
S is for, sworn foe to formality,
T's, full of Civil Legality.
U's, factiously splitting,
V's the, ceaselessly sitting.
W's, by Museum made frantic,
X the **X**penditure, grown quite gigantic.
Y are the Young men, whom nobody thought about—
Z is the Zeal that this victory brought about.

Solutions: Acland, Brodie, Conington, Donkin, Evans, Freeman, Goldwin Smith, Heurtley, Jowett, Kitchin, Liddell, Mansel, Norris, Ogilvie, Parker, Rolleston, Stanley, Travers Twiss, University, Vice-Chancellor, Wall

18.3 A Monument

Source: Mischmasch

A monument—men all agree—
Am I in all sincerity,
 Half cat, half hindrance made.
If head and tail removed should be,
Then most of all you strengthen me;
Replace my head, the stand you see
 On which my tail is laid.

Solution: tablet [tab-let; able; table + t(ea)]

18.4 A Nursery Darling

Source: The Nursery "Alice" (dedication)

A Mother's breast:

Safe refuge from her childish fears,
From childish troubles, childish tears,
Mists that enshroud her dawning years!
See how in sleep she seems to sing
A voiceless psalm—an offering
Raised, to the glory of her King,
In Love: for Love is Best.

A Darling's kiss:

Dearest of all the signs that fleet
From lips that lovingly repeat
Again, again, their message sweet!
Full to the brim with girlish glee,
A child, a very child is she,
Whose dream of Heaven is still to be
At Home: for Home is Bliss.

Acrostic: Marie van der Gucht (second letters)

18.5 Rules and Regulations

Source: Useful and Instructive Poetry

A short direction
To avoid dejection,
By variations
In occupations,
And prolongation
Of relaxation,
And combinations
Of recreations,
And disputation
On the state of the nation
In adaptation
To your station,
By invitations
To friends and relations,
By evitation
Of amputation,
By permutation
In conversation,
And deep reflection
You'll avoid dejection.
Learn well your grammar,

And never stammer,
Write well and neatly,
And sing most sweetly,
Be enterprising,
Love early rising,
Go walkes of six miles,
Have ready quick smiles,
With lightsome laughter,
Soft flowing after.
Drink tea, not coffee;
Never eat toffy.
Eat bread with butter.
Once more, don't stutter.
Don't waste your money,
Abstain from honey.
Shut doors behind you,
(Don't slam them, mind you.)
Drink beer, not porter.
Don't enter the water
Till to swim you are able.
Sit close to the table.
Take care of a candle.
Shut a door by the handle,
Don't push with your shoulder
Until you are older.
Lose not a button.
Refuse cold mutton.
Starve your canaries.
Believe in fairies.
If you are able,
Don't have a stable
With any mangers.
Be rude to strangers.
Moral: Behave.

18.6 Alas! she would not hear my prayer!

Source: Photography Extraordinary (extracted, connected)

Alas! she would not hear my prayer!
Yet it were rash to tear my hair;
Disfigured, I should be less fair.
She was unwise, I may say blind;
Once she was lovingly inclined;
Some circumstance has changed her mind.

Well! so my offer was no go!
She might do worse, I told her so;
She was a fool to answer "No."
However, things are as they stood;
Nor would I have her if I could,
For there are plenty more as good.

Firebrands and daggers! hope hath fled!
To atoms dash the doubly dead!
My brain is fire—my heart is lead!
Her soul is flint, and what am I?
Scorch'd by her fierce, relentless eye.
Nothingness is my destiny!

18.7 Alice dear, will you join me in hunting the Snark?

Source: sent to Alice Crompton, April 7, 1876

Alice dear, will you join me in hunting the Snark?
Let us go to the chase hand-in-hand:
If we only can find one before it gets dark,
Could anything happen more grand?
Ever ready to share in the Beaver's despair,
Count your poor little fingers and thumbs;
Recollecting with tears all the smudges and smears
On the page where you work at your sums!
May I help you to seek it with thimbles and care?
Pursuing with forks and hope?
To threaten its life with a railway-share?
Or to charm it with smiles—but a maiden so fair
Need not trouble herself about soap!

Acrostic: Alice Crompton

18.8 Alice dreamed one night

Source: sent to Alice Pratt, April 7, 1876

Alice dreamed one night that she
Left her home in Wonderland:
In a house called “Number Three
Carleton Road” she seemed to be,
Empress of a Bellman’s band.

Patiently the chase she led,
Running over Tufnell Park—
All because a book she read,
That was running in her head;
'Twas “The Hunting of the Snark”!

Acrostic: Alice Pratt

18.9 The Poet's Farewell

Source: The Rectory Umbrella

All day he had sat without a hat,
The comical old feller,
Shading his form from the driving storm
With the Rectory Umbrella.
When the storm had passed by, & the ground was dry,
And the sun shon bright on the plain,
He arose from his seat, and he stood on his feet,
And sang a melting strain:
All is o'er! the sun is setting,
Soon will sound the dinner bell;
Thou hast saved me from a wetting,
Here I'll take my last farewell!
Far dost thou eclipse the Maga-
zines which came before thy day,
And thy coming made them stagger,
Like the stars at morning ray.
Let me call again their phantoms,
And their voices long gone by,
Like the crow of distant bantams,
Or the buzzing of a fly.
First in age, but not in merit,
Stands the Rectr'y Magazine;
All it's wit thou dost inherit,
Though the Comet came between.
Novelty was in it's favour,
And mellifluous it's lays,
All, with eager plaudits, gave a
Vote of honour in it's praise.
Next in order comes the Comet,
Like some vague and feverish dream,
Gladly, gladly turn I from it,
To behold thy rising beam!
When I first began to edit,
In the Rect'ry Magazine,
Each one wrote therein who read it,
Each one read who wrote therein.
When the Comet next I started,
They grew lazy as a drone:
Gradually all departed,
Leaving me to write alone.
But in thee—let future ages
Mark the fact which I record,
No one helped me in *thy* pages,
Even with a single word!

But the wine has left the cellar,
And I hear the dinner bell,
So fare thee well, my old Umbrella,
Dear Umbrella, fare thee well!

18.10 All in the Golden Afternoon

Source: Alice's Adventures in Wonderland (dedication, earlier versions with minor differences as noted)

All in the golden afternoon
Full leisurely we glide;
For both our oars, with little skill,
By little arms are plied,
While little hands make vain pretence
Our wanderings to guide.

Ah, cruel Three! In such an hour,
Beneath such dreamy weather,
To beg a tale of breath too weak
To stir the tiniest feather!
Yet what can one poor voice avail
Against three tongues together?

Imperious Prima flashes forth
Her edict to "begin it":
In gentler tones¹ Secunda hopes
"There will be nonsense in it!"
While Tertia interrupts the tale
Not *more* than once a minute.

Anon, to sudden silence won,
In fancy they pursue
The dream-child moving through a land
Of wonders wild and new,
In friendly chat with bird or beast—
And half believe it true.

And ever, as the story drained
The wells of fancy dry,
And faintly strove that weary one
To put the subject by,
"The rest next time—" "It *is* next time!"
The happy voices cry.

Thus grew the tale of Wonderland:
Thus slowly, one by one,
Its quaint events were hammered out
And now the tale is done,
And home we steer, a merry crew,
Beneath the setting sun.

Alice! A childish story take,
And, with a gentle hand,
Lay it where Childhood's dreams are twined
In Memory's mystic band,

¹tone

Like pilgrim's wither'd wreath of flowers
Pluck'd in a far-off land.

18.11 A Tale of a Tail

Source: Useful and Instructive Poetry

An aged gardener gooseberries picked,
From off a gooseberry tree;
The thorns they oft his fingers pricked
Yet never a word said he.

A dog sat by him with a tail,
Oh! *such* a tail! I ween,
That never such in hill or dale,
Hath hitherto been seen.

It was a tail of desperate length,
A tail of grizzly fur,
A tail of muscle, bone, and strength
Unmeet for such a cur.

Yet of this tail the dog seemed proud
And ever and anon,
He raised his head, and barked so loud,
That tho' the man seemed *something* cowed,
Yet still his work went on.

At length in lashing out its tail,
It twisted it so tight,

Around his legs, 'twas no avail,
To pull with all its might.
The gardener scarce could make a guess,
What round his legs had got,
Yet he worked on in weariness,
Although his wrath was hot.
“Why, what’s the matter?” he did say,
“I can’t keep on my feet,
Yet not a glass I’ve had this day
Save one, of brandy neat.
“Two quarts of ale, and one good sup,
Of whiskey sweet and strong,
And yet I scarce can now stand up,
I fear that something’s wrong.”
His work reluctantly he stopped,
The cause of this to view,
Then quickly seized an axe and chopped
The guilty tail in two.
When this was done, with mirth he bowed,
Till he was black and blue,
The dog it barked both long and loud,
And with good reason too.
Moral: “Don’t get drunk.”

18.12 The Storm

Source: The Rectory Umbrella

An old man sat anent a clough,¹
A grizzled² old man an' weird,³
Deep were the wrinkles in his aged brow,
An' hoar his snowy beard,
All tremmed⁴ before his glance, I trow,⁵

¹probably a bank.

²grizzled.

³wizard-like.

⁴trembled.

⁵= I wot, I ween, meaning nearly the same as "I know."

Sae savagely he leared.
 The rain cloud cam frae out the west,
 An' spread athwart⁶ the sky,
 The crow has cowered⁷ in her nest,
 She kens the storm is nigh,
 He folds his arms across his breast,
 Thunder an' lightning do your best!
 "I will not finch nor fly!"
 Draggles⁸ with wet the tall oak tree,
 Beneath the dashing rain,
 The old man sat, an' gloomily
 He gazed athwart the plain,
 Down on the wild and heaving sea,
 Where heavily an' toilsomely
 Yon vessel ploughs the main.
 Above the thunder cloud frowns black,
 The dark waves howl below,
 Scarce can she hold along her track,
 Fast rocking to an' fro,
 And oft the billow drives her back,
 And oft her straining timbers crack,
 Yet onward she doth go.
 The old man gazed without a wink,
 An' with a deadly⁹ grin:
 "I laid a wager she would sink,
 "Strong hopes had I to win;
 "'Twas ten to one, but now I think,
 "That Bob will sack the tin."¹⁰
 Then from the precipice's brink
 He plunged headforemost in.¹¹

⁶across.

⁷crouched.

⁸hangs heavily.

⁹or, murderous.

¹⁰pocket the money.

¹¹imitated from the conclusion of Gray's "Bard," only finer.

18.13 A Valentine

Source: Mischmasch (as “Lines”, with signature “Ch: Ch: Feb: 1860.” and minor differences as noted); Phantasmagoria (with signature “Feb. 13, 1860.” and minor differences as noted); Rhyme? and Reason?

[Sent to a friend who had complained that I was glad enough to see him when he came, but didn't seem to miss him if he stayed away.]¹

And cannot pleasures, while they last,
Be actual unless, when past,
They leave us shuddering and aghast,
With anguish smarting?
And cannot friends be ^{firm}² and fast,
And yet bear parting?

And must I then, at Friendship's call,
Calmly resign the little all
(Trifling, I grant, it is and small)
I have of gladness,
And lend my being to the thrall
Of gloom and sadness?

And think you that I should be dumb,
And full *dolorum omnium*,
Excepting when you choose to come
And share my dinner?
At other times be sour and glum
And daily thinner?

[Must he then only live to weep,
Who'd prove his friendship true and deep?
By day a lonely shadow creep,
At night-time languish,
Oft raising in his broken sleep
The moan of anguish?³

¹*Mischmasch*: To a friend at Radley College, who had complained “that I was glad enough to see him when he came, but didn't seem to care about it if I stayed away.”

Phantasmagoria: To a friend at Radley College, who had complained ‘that I was glad enough to see him when he came, but did not seem to miss him if he stayed away.’

²fond

³Mischmasch:

Must he then live in groans and screams,
Who'd prove himself the friend he seems,
And haunt, by day, all silent streams,
At night sleep badly,
Oft muttering in his broken dreams
The name of Radley?

Phantasmagoria:

Must he then only live to weep,
Who'd prove his friendship true and deep,
By day a lonely shadow creep,
At night rest badly,
Oft muttering in his broken sleep

The lover, if for certain days
His fair one be denied his gaze,
Sinks not in grief and wild amaze,
 But, wiser wooer,
He spends the time in writing lays,
 And posts them to her.

 And if the verse flow free and fast,
Till even the poet is aghast,
A touching Valentine at last
 The post shall carry,
When thirteen days are gone and past
 Of February.⁴

Farewell, dear friend, and when we meet,
 In desert waste or crowded street,⁵
Perhaps before this week shall fleet,
 Perhaps to-morrow,
I trust to find *your* heart the seat
 Of wasting sorrow.

The name of Radley?

4

And if he be an Oxford Don,
Or 'Jonson's learned sock be on,'
A touching Valentine anon
 The post shall carry,
When thirteen days are come and gone
 Of February.

⁵"Here in my room, or in the street," in Mischmasch

18.14 Are you deaf, Father William?

Source: inscribed into a copy of *The Hunting of the Snark* sent to Miss Paine, 1876

“Are you deaf, Father William?” the young man said,
“Did you hear what I told you just now?
“Excuse me for shouting! Don’t waggle your head
“Like a blundering, sleepy old cow!
“A little maid dwelling in Wallington Town,
“Is my friend, so I beg to remark:
“Do you think she’d be pleased if a book were sent down
“Entitled ‘The Hunt of the Snark?’”
“Pack it up in brown paper!” the old man cried,
“And seal it with olive-and-dove.
“I command you to do it!” he added with pride,
“Nor forget, my good fellow, to send her beside
“Easter Greetings, and give her my love.”

May 27, 1876.

Acrostic: Adelaide Paine

18.15 Around my lonely hearth, to-night

Source: for Agnes Georgina Hull, 1878

Around my lonely hearth, to-night,
Ghostlike the shadows wander:
Now here, now there, a childish sprite,
Earthborn and yet as angel bright,
Seems near me as I ponder.

Gaily she shouts: the laughing air
Echoes her note of gladness—
Or bends herself with earnest care
Round fairy-fortress to prepare
Grim battlement or turret-stair—
In childhood's merry madness!

New raptures still hath youth in store.
Age may but fondly cherish
Half-faded memories of yore—
Up, craven heart! repine no more!
Love stretches hands from shore to shore:
Love is, and shall not perish!

Acrostic: Agnes Georgina Hull

18.16 The Angler's Adventure

Source: Useful and Instructive Poetry

As I was ling'ring by the river's stream
Striving to lure the shoals of glitt'ring fish
With hook and line, methought I had a dream,
That what I caught was placed upon a dish.
No tail it had, it could not be a beast,
No wings, it could by no means be a bird.
Its flesh, when tasted, proved a luscious feast,
And yet, methought, its name I'd never heard.
Speckles it had of most enchanting hue,
An unknown foreign creature it appeared;
It might be anything, perhaps a Jew,
I almost wondered it had not a beard.
While thus I slept and dreamed, I felt a twitch
Which almost pulled my fishing rod away,
I started to my feet. Oh! what a rich
Vision of splendour in the water lay!
The creature of my dreams! most wonderful,
Struggling most violently on the hook,
I landed it with one most desperate pull,
Ere that I ventured on its form to look.
In every item it did correspond
Exactly with what I in sleep had seen,
It seemed in fact almost to go beyond
The former in the grandeur of its mean.
I scarce could fancy that there did exist
A creature which in beauty so surpassed.
I pondered o'er each fish and bird and beast,
And puzzled out its name, I thought, at last.
By thinking over Buffon's history,
And Bewick's Birds, and Isaak Walton's book,
I seemed to penetrate the mystery,
The name of that which hung upon my hook.
Remembering Isaak Walton's own instructions
And other anglers' who have gone before us,
By algebra, and eke the help of fluxions,
I made it out, it was a Plesiosaurus!
"Is it not so?" I said unto my maid,
She wrung her hands as through the room she strode,
"Take it away! Oh master mine," she said,
"It is, it is, it is, it is a toad!!!!!!!!!"
Moral: "Don't dream."

18.17 As It Fell upon a Day

Source: Rectory Magazine

As I was sitting on the hearth
(And o! but a hog is fat!)
A man came hurrying up the path,
(And what care I for that?)
When he came the house unto,
His breath both quick and short he drew.
When he came before the door,
His face grew paler than before.
When he turned the handle round,
The man fell fainting to the ground.
When he crossed the lofty hall,
Once and again I heard him fall.
When he came up the turret stair,
He shrieked and tore his raven hair.
When he came my chamber in,
(And o! but a hog is fat!)
I ran him through with a golden pin,
(And what care I for that?)

J. V.

18.18 Anagrammatic Sonnet

Source: sent to Maud Standen, December 18, 1877

[M]y “Anagrammatic Sonnet” will be new to you. Each line has 4 feet, and each foot is an anagram, i. e., the letters of it can be re-arranged so as to make one word. Thus there are 24 anagrams, which will occupy your leisure moments for some time, I hope. Remember, I don’t limit myself to substantives, as some do. I should consider “we dish = wished” a fair anagram.

As to the war, try elm. I tried.
The wig cast in, I went to ride.
“Ring? Yes.” We rang. “Let’s rap.” We don’t.
“O shew her wit!” As yet she won’t.
Saw eel in Rome. Dry one: he’s wet.
I am dry. O forge! Th’rogue! Why a net?

To these you may add “abcdefgi,” which makes a compound word—as good a word as “summer-house.”

Solutions:

oats, wreath, myrtle, tidier
weight, antics, twine, editor
syringe, gnawer, plaster, wonted
whose, wither, yeast, snoweth
weasel, merino, yonder, hewest
myriad, forego, tougher, yawmeth

(Some other variants are also possible.)

abcdefgi: big-faced

18.19 Prologue (1862)

Source: College Rhymes, November 1862

As when an anthem in full chorus-swell
Hath swept away, one solitary note,
Dreamy and low as chime of far-off bell,
Through the deep silence tremblingly doth float—
As when the sun, in crimson clouds of even,
Hath sunk from sight, and all the hills are gray,
A feeble ray yet lingers in the heaven,
A smile upon the face of dying Day—
So, when the voices of the sons of song
Have rolled in thunder o'er a trancèd nation,
When silence falls upon that glorious throng,
And men are hushed in awful expectation,
Let Cam and Isis, with attunèd flow,
Through the dumb aching void prolong their strain,
Lest the vast music, that enchains us so,
With sudden pause the listening ear should pain.

18.20 Atalanta in Camden-Town

Source: Punch, July 27, 1867 (without image, with minor differences as noted);
Phantasmagoria (without image, with minor differences as noted); Rhyme? and
Reason? (earlier editions with minor differences as noted)

Parody on *Atalanta in Calydon* by A. C. Swinburne

Ay, 'twas here, on this spot,
In that summer of yore,
Atalanta did not
Vote my presence a bore,
Nor reply to my tenderest talk "She had heard all that nonsense
before."
She'd the brooch I had bought
And the necklace and sash on,
And her heart, as I thought,
Was alive to my passion;
And she'd done up her hair in the style that the Empress had brought
into fashion.

I had been to the play
With my pearl of a Peri—
But, for all I could say,
She declared she was weary,
That "the place was so crowded and hot, and she couldn't abide that
Dundreary."
Then I thought "Lucky boy!"¹

¹'Tis for me

'Tis for *you* that she whimpers!²
 And I noted with joy³
 Those sensational simpers:
 And I said “This is scrumptious!”—a phrase I had learned from the
 Devonshire shrimpers.
 And I vowed “Twill be said
 I’m a fortunate fellow,
 When the breakfast is spread,
 When the toppers are mellow,
 When the foam of the bride-cake is white, and the fierce orange-
 blossoms are yellow⁴!”
 O that languishing yawn!
 O those eloquent⁵ eyes!
 I was drunk with the dawn
 Of a splendid surmise—
 I was stung by a look, I was slain by a tear, by a tempest of sighs.⁶
 variant Then I whispered “I see
 The sweet secret thou keepest,
 And the yearning for *ME*
 That thou wistfully weepst!
 And the question is ‘License or Banns?’, though undoubtedly Banns
 are the cheapest.” In the early editions of *Rhyme? and Reason?*
 this verse is:

And I whispered “’Tis time!
 Is not Love at its deepest?
 Shall we squander Life’s prime,
 While thou waitest and weepst?
 Let us settle it, License or Banns?—though undoubt-
 edly Banns are the cheapest.”

In *Punch* and *Phantasmagoria* is is:

And I whispered “I guess
 The sweet secret thou keepest,
 And the dainty distress
 That thou wistfully weepst;
 And the question is ‘License or banns?’ though un-
 doubtedly banns are the cheapest.”

In *Punch* the first line starts with “And I murmured . . .”.

“Be my Hero,” said I,
 “And let *me* be Leander!”
 But I lost her reply—

²That she whines and she whimpers!

³“it soothed me to see” in all earlier variants, but with “thrilled” instead of “soothed” in *Punch*

⁴“mellow” in *Punch*

⁵“Those emotional” in *Punch*

⁶“serpentine smile, and tossed on a tempest of sighs.” in *Punch*

Something ending with “gander”—
For the omnibus rattled so loud that no mortal could quite understand her.⁷

⁷In the early editions of *Rhyme? and Reason?* this verse starts:

“Ah, my Hero,” said I,
“Let me be thy Leander!”

In *Punch* and *Phantasmagoria* is is:

Then her white hand I clasped,
And with kisses I crowned it:
But she glared and she gasped,
And she muttered “Confound it!”—

Or at least it was something like that, but the noise of the omnibus drowned it.

18.21 Turtle Soup

Source: Alice's Adventures under Ground (extracted, only first verse, with slightly different punctuation); Alice's Adventures in Wonderland (extracted)

Parody on *Star of the Evening* by James M. Sayles

Beautiful Soup, so rich and green,
Waiting in a hot tureen!
Who for such dainties would not stoop?
Soup of the evening, beautiful Soup!
Soup of the evening, beautiful Soup!
 Beau—ootiful Soo—oop!
 Beau—ootiful Soo—oop!
Soo—oop of the e—e—evening,
 Beautiful, beautiful Soup!

Beautiful Soup! Who cares for fish,
Game, or any other dish?
Who would not give all else for two p
ennyworth only of beautiful Soup?
Pennyworth only of beautiful Soup?
 Beau—ootiful Soo—oop!
 Beau—ootiful Soo—oop!
Soo—oop of the e—e—evening,
 Beautiful, beauti—FUL SOUP!

Soo—oop of the e—e—evening,
 Beautiful, beautiful Soup!

18.22 To My Pupil

Source: A Tangled Tale (dedication)

Beloved Pupil! Named by thee,
Addition, Subtraction, Multiplication,
Division, Fractions, Rule of Three,
Attest thy deft manipulation!

Then onward! Let the voice of Fame
From Age to Age repeat thy story,
Till thou hast won thyself a name
Exceeding even Euclid's glory!

Acrostic: Edith Rix (second letters)

18.23 Beneath the Waters of the Sea

Source: Alice's Adventures under Ground (extracted)

Parody on Negro minstrel song *Sally Come Up*

Beneath the waters *of* the sea
Are lobsters thick as thick can be—
They love to dance with you and me,
My own, my gentle Salmon!

Salmon come up! Salmon go down!
Salmon come twist your tail around!
Of all the fishes *of* the sea
There's none so good as Salmon!

18.24 Fame's Penny-Trumpet

Source: printed 1876 (without image, with the remark “not published”, with minor differences as noted); Rhyme? and Reason?

[Affectionately dedicated to all “original researchers” who pant for “endowment.”]

Blow, blow your trumpets till they crack,
Ye little men of little souls!
And bid them huddle at your back—
Gold-sucking leeches, shoals on shoals!
Fill all the air with hungry wails—
“Reward us, ere we think or write!
Without your Gold mere Knowledge fails
To _lsate¹ the _lswinish² appetite!”
And, where great Plato paced serene,
Or Newton paused with wistful eye,
Rush to the chace with hoofs unclean
And _lBabel-clamour³ of the sty!
Be yours the pay: be theirs the praise:
We will not rob them of their due,
Nor vex the ghosts of other days
By naming them along with you.
They sought and found undying fame:
They toiled not for reward nor thanks:
Their cheeks are hot with honest shame
For you, the modern mountebanks!
Who preach of _lJustice⁴—plead with tears
That Love and Mercy should abound—
While marking with complacent ears
The moaning of some tortured hound:
_lWho prate of Wisdom—nay, forbear,
Lest Wisdom turn on you in wrath,
Trampling, with heel that will not spare,
The vermin that beset her path!⁵
Go, throng each other's drawing-rooms,
Ye idols of a petty clique:
Strut your brief hour in borrowed plumes,
And make your penny-trumpets squeak:

¹whet

²noble

³Babel-mutterings

⁴Virtue

⁵

Who seek your God in self-made germs—
In close-shut flasks of sodden hay—
Yet find Him not, poor blinded worms,
In Heaven or Earth, in Night or Day.

“Go, through each other’s drawing-rooms”

Deck your dull talk with pilfered shreds⁶
 Of learning from a nobler time,
 And oil each other's little heads
 With mutual Flattery's golden slime:⁷
 And when the topmost height ye gain,
 And stand in Glory's ether clear,
 And grasp⁸ the prize of all your pain—
 So many hundred pounds a year—
 Then let Fame's banner be unfurled!
 Sing Pæans for a victory won!
 Ye tapers, that would light the world,
 And cast a shadow on the Sun—
 Who still shall pour His rays sublime,
 One crystal flood⁹, from East to West,
 When ye have burned your little time
 And feebly flickered into rest!¹⁰

⁶Spout to each other little shreds

⁷Additional stanza similar to replaced stanza above, but with first line "But name not Wisdom—oh beware".

⁸Grasping

⁹One flood of light

¹⁰separate edition signed "An Unendowed Researcher. July, 1876."

18.25 Sequel to “The Shepherd of Salisbury Plain”

Source: written 1862 (authorship not entirely certain)

But supposing this sheep, when he entered the fold,
Had solemnly taken a vow
To shape all his bleats to one definite mould,
Pray what can be said for him now?
Must the rules we hold binding in business and trade
Be ignored in the Church’s domain?
And need promises never be kept that are made
To the Shepherd of Salisbury Plain?
Though freedom of bleat is withholden from none
Of the flock, be his wool black or white,
Yet the freedom of breaking your promise is one
To which few would insist on their right.
So, my friend, without wishing to charge upon you
The quibble your verses maintain,
I but say, would that all were as honest and true
As the Shepherd of Salisbury Plain!

Audi alteram partem.

18.26 Child of the pure unclouded brow

Source: Through the Looking Glass (dedication)

Child of the pure unclouded brow
And dreaming eyes of wonder!
Though time be fleet, and I and thou
Are half a life asunder,
Thy loving smile will surely hail
The love-gift of a fairy-tale.

I have not seen thy sunny face,
Nor heard thy silver laughter;
No thought of me shall find a place
In thy young life's hereafter—
Enough that now thou wilt not fail
To listen to my fairy-tale.

A tale begun in other days,
When summer suns were glowing—
A simple chime, that served to time
The rhythm of our rowing—
Whose echoes live in memory yet,
Though envious years would say 'forget.'

Come, hearken then, ere voice of dread,
With bitter tidings laden,
Shall summon to unwelcome bed
A melancholy maiden!
We are but older children, dear,
Who fret to find our bedtime near.

Without, the frost, the blinding snow,
The storm-wind's moody madness—
Within, the firelight's ruddy glow,
And childhood's nest of gladness.
The magic words shall hold thee fast:
Thou shalt not heed the raving blast.

And though the shadow of a sigh
May tremble through the story,
For 'happy summer days' gone by,
And vanish'd summer glory—
It shall not touch with breath of bale
The pleasance of our fairy-tale.

18.27 Dear Dolly, since I do not know

Source: letter to Dolly Draper, May 20, 1876

Dear Dolly, Since I do not know
Of any grander name than 'Dolly',
Let me for once address you so,
Leaving 'Miss Draper' out, although
You *may* be startled at my folly!
Day, 'twenty-seventh'; month, 'the first';
Rejoice that now you know the worst!
And, though you *may* be tall and stately,
Putting your pride in a moment by,
Excuse my telling you that I
Remain yours most affectionately,
Lewis Carroll

Acrostic: Dolly Draper

18.28 Dear Maggie,—I found that the friend

Source: letter written to Margaret Cunnyngame, January 30, 1868; original written in prose, here formatted into verses

Dear Maggie,—I found that the *friend*,
that the little girl asked me to write to,
lived at Ripon, and not at Land's End—
a nice sort of place to invite to!
It looked rather suspicious to me—
and soon after, by dint of incessant
inquiries, I found out that *she*
was called Maggie, and lived in a Crescent!
Of course I declared, "After that"
(the language I used doesn't matter),
"I will *not* address her, that's flat!
So do not expect me to flatter."

Well, I hope you will soon see
your beloved Pa come back—
for consider, should you be
quite content with only Jack?
Just suppose they made a blunder!
(Such things happen now and then.)
Really, now, I shouldn't wonder
if your "John" came home again,
and your father stayed at school!
A most awkward thing, no doubt.
How would you receive him? You'll
say, perhaps, "you'd turn him out."
That would answer well, so far
as concerns the boy, you know—
but consider your Papa,
learning lessons in a row
of great inky schoolboys! This
(though unlikely) might occur:
"Haly" would be grieved to miss
him (don't mention it to *her*).

No *carte* has yet been done of me,
that does real justice to my *smile*;
and so I hardly like, you see,
to send you one. However, I'll
consider if I will or not—
meanwhile, I send a little thing
to give you an idea of what
I look like when I'm lecturing.
The merest sketch, you will allow—
yet still I think there's something grand
in the expression of the brow

and in the action of the hand.

Have you read my fairy tale
in *Aunt Judy's Magazine*?¹
If you have you will not fail
to discover what I mean
when I say "Bruno yesterday came
to remind me that *he* was my god-son!"—
on the ground that I "gave him a name"!

Your affectionate friend, C. L. Dodgson.

P.S.—I would send, if I were not too shy,
the same message to "Haly" that she
(though I do not deserve it, not I!)
has sent through her sister to me.
My best love to yourself—to your Mother
my kindest regards—to your small,
fat, impertinent, ignorant brother
my hatred. I think that is all.

¹Remark: → 3.11, p. 667

18.29 Dear Violet,—I'm glad to hear

Source: letter written to Violet Dodgson, May 6, 1889; original written in prose, here formatted into verses

Dear Violet,—I'm glad to hear
you children like the Magazine
I ordered for you for a year:
and if you happen to have seen
the book about "Lord Fauntleroy,"
you'll find an interesting bit
about the child that acts the Boy
(now they have made a Play of it)
in Number Six. She seems to be
a child without one bit of pride:
a pretty name too, hasn't she?
the little "Elsie Leslie Lyde."

I grieve to hear your bantam-hen
is fond of rolling eggs away.
You should remind it, now and then,
of "Waste not, want not." You should say
"a bantam-hen, that wastes an egg,
is sure to get extremely poor,
and to be forced at last to beg
for hard-boiled eggs, from door to door.
How would you like it, Bantam-hen,"
you should go on, "if all your brood
were hard-boiled chickens? You would then
be sorry you had been so rude!"
Tell it all this, and don't forget!
And now I think it's time for me
to sign myself, dear Violet,
Your loving Uncle, C. L. D.

18.30 Puzzles from Wonderland

Source: Aunt Judy's Magazine, December 1870

By the Author of "Alice's Adventures in Wonderland."

I.

Dreaming of apples on a wall,
And dreaming often, dear,
I dreamed that, if I counted all,
How many would appear?

II.

A stick I found, that weighed two pound:
I sawed it up one day
In pieces eight, of equal weight.
How much did each piece weigh?

[Everybody says "a quarter of a pound," which is wrong.]

III.

John gave his brother James a box:
About it there were many locks.
James woke, and said it gave him pain;
So gave it back to John again.
The box was not with lid supplied,
Yet caused two lids to open wide:
And all these locks had never a key—
What kind of a box, then, could it be?

IV.

What is most like a bee in May?
"Well, let me think: perhaps—" you say.
Bravo! You're guessing well to-day!

V.

Three sisters at breakfast were feeding the cat.
The first gave it sole—Puss was grateful for that:
The next gave it salmon—which Puss thought a treat:
The third gave it herring—which Puss wouldn't eat.

[Explain the conduct of the cat.]

VI.

Said the Moon to the Sun,
“Is the daylight begun?”
Said the Sun to the Moon,
“Not a minute too soon.”
“You’re a Full Moon,” said he.
She replied, with a frown,
“Well! I never *did* see
So uncivil a clown!”

[*Query.* Why was the moon so angry?]

VII.

When the King found that his money was nearly all gone, and that he really *must* live more economically, he decided on sending away most of his Wise Men. There were some hundreds of them—very fine old men, and magnificently dressed in green velvet gowns with gold buttons: if they *had* a fault, it was that they always contradicted one another when he asked for their advice—and they certainly ate and drank *enormously*. So, on the whole, he was rather glad to get rid of them. But there was an old law, which he did not dare to disobey, which said that there must always be

“Seven blind of both eyes:
Ten blind of one eye:
Five that see with both eyes:
Nine that see with one eye.”

[*Query.* How many did he keep?]

Solutions (by “Eadgyth”, Carroll might have seen, approved, and perhaps improved them):

I.

If ten the number dreamed of, why ’tis clear
That in the dream ten apples would appear.

II.

In Shylock’s bargain for the flesh, was found
No mention of the blood that flowed around;
So when the stick was sawed in pieces eight,
The sawdust lost diminished from the weight.

III.

As curly-wigg’d Jemmy was sleeping in bed
His brother John gave him a blow on the head;
James opened his eyelids, and spying his brother,
Doubled his fist, and gave him another.
This kind of box then is not so rare;
The lids are the eyelids, the locks are the hair;
And as every schoolboy can tell to his cost,
The key to the tangles is constantly lost.

IV.

'Twixt "Perhaps" and "May be"
Little difference we see:
Let the question go round,
The answer is found.

V.

That salmon and sole Puss should think very grand
Is no such remarkable thing,
For more of these dainties Puss took up her stand:
But when the third sister stretched out her fair hand
Pray why should Puss swallow her ring?

VI.

"In these degenerate days," we oft hear said,
"Manners are lost, and chivalry is dead!"
No wonder, since in high exalted spheres
The same degeneracy, in fact, appears.
The Moon in social matters interfering,
Scolded the Sun, when early in appearing;
And the rude Sun, her gentle sex ignoring,
Called her a fool, thus her pretensions flooring.

VII.

Five seeing, and seven blind,
Give us twelve in all, we find;
But all of these, 'tis very plain,
Come into account again.
For take notice, it may be true,
That those blind of one eye are blind for two;
And consider contrariwise,
That to see with your eye you may have your eyes;
So setting one against the other—
For a mathematician no great bother—
And working the sum, you will understand
That sixteen wise men still trouble the land.

18.31 Dreams, that elude the Waker's frenzied grasp

Source: Sylvie and Bruno Concluded (dedication)

Even though many if not most of the reprints have "Maker", "Waker" is correct.

Dreams, that elude the Waker's frenzied grasp—
Hands, stark and still, on a dead Mother's breast,
Which nevermore shall render clasp for clasp,
Or softly soothe a weeping Child to rest—
In suchlike forms me listeth to portray
My Tale, here ended. Thou delicious Fay—
The guardian of a Sprite that lives to tease thee—
Loving in earnest, hiding but in play
The merry mocking Bruno! Who, that sees thee,
Can fail to love thee, Darling, even as I?—
My sweetest Sylvie, we must say 'Good-bye!'

Acrostic: Enid Stevens (third letters)

18.32 Four Riddles. No. II

Source: Rhyme? and Reason?

The introduction has been moved here.

No. II. was written after seeing Miss Ellen Terry perform in the play of "Hamlet." In this case the first stanza describes the two main words.

Empress of Art, for thee I twine
This wreath with all too slender skill.
Forgive my Muse each halting line,
And for the deed accept the will!

O day of tears! Whence comes this spectre grim,
Parting, like Death's cold river, souls that love?
Is not he bound to thee, as thou to him,
By vows, unwhispered here, yet heard above?

And still it lives, that keen and heavenward flame,
Lives in his eye, and trembles in his tone:
And these wild words of fury but proclaim
A heart that beats for thee, for thee alone!

But all is lost: that mighty mind o'erthrown,
Like sweet bells jangled, piteous sight to see!
"Doubt that the stars are fire," so runs his moan,
"Doubt Truth herself, but not my love for thee!"

A sadder vision yet: thine aged sire
Shaming his hoary locks with treacherous wile!
And dost thou now doubt Truth to be a liar?
And wilt thou die, that hast forgot to smile?

Nay, get thee hence! Leave all thy winsome ways
And the faint _{fragrance}¹ of thy scattered flowers:
In holy silence wait the appointed days,
And weep away the leaden-footed hours.

Solution: Ellen Terry; engagement, love, letter/liar,
eavesdropper/equivocator/encounter, nunnery

¹accidentally "fragrance"

18.33 Even while the blinding bandage lies

Source: inscribed into a copy of *The Hunting of the Snark* for Edith Denman,
September 2, 1876

Even while the blinding bandage lies,
Daughter of a Judge, upon thine eyes,
If the scales thou wield with care
Truth and Justice will declare
Hunting Snarks is innocent and wise!

Acrostic: Edith

18.34 Lays of Sorrow. No. 2

Source: The Rectory Umbrella

Parody on *Horatius (Lays of Ancient Rome)* by Thomas Babington Macaulay

Fair stands the ancient¹ Rectory,
The Rectory of Croft,
The sun shines bright upon it,
The breezes whisper soft.
From all the house and garden
It's inhabitants come forth,
And muster in the road without,
And pace in twos and threes about,
The children of the North.

Some are waiting in the garden,
Some are waiting at the door,
And some are following behind,
And some have gone before.
But wherefore all this mustering?
Wherefore this vast array?
A gallant feat of horsemanship
Will be performed today.

To eastward and to westward,
The crowd divides amain,
Two youths are leading on the steed,
Both tugging at the rein:
And sorely do they labour,
For the steed² is very strong,
And backward moves it's stubborn feet,
And backward ever doth retreat,
And drags it's guides along.

And now the knight hath mounted,
Before the admiring band,
Hath got the stirrups on his feet,
The bridle in his hand.
Yet, oh! beware, sir horseman!
And tempt thy fate no more,
For such a steed as thou hast got,
Was never rid before!

The rabbits³ bow before thee,
And cower in the straw;

¹this Rectory has been supposed to have been built in the times of Edward the sixth, but recent discoveries clearly assign its origin to a much earlier period. A stone has been found in an island formed by the river Tees, on which is inscribed the letter "A," which is justly conjectured to stand for the name of the great king Alfred, in whose reign this house was probably built.

²the poet entreats pardon for having represented a donkey under this dignified name.

³with reference to these remarkable animals see "Moans from the Miserable" page 1927.

The chickens⁴ are submissive,
And own thy will for law;
Bullfinches and canary
Thy bidding do obey;
And e'en the tortoise in it's shell
Doth never say thee nay.

But thy steed will hear no master,
Thy steed will bear no stick,
And woe to those that beat her,
And woe to those that kick⁵!
For though her rider smite her,
As hard as he can hit,
And strive to turn her from the yard,
She stands in silence, pulling hard
Against the pulling bit.

And now the road to Dalton
Hath felt their coming tread,
The crowd are speeding on before,
And all have gone ahead.
Yet often look they backward,
And cheer him on, and bawl,
For slower still and still more slow,
That horseman and that charger go,
And scarce advance at all.

And now two roads to choose from
Are in that rider's sight:
In front, the road to Dalton,
And New Croft upon the right.
"I ca'n't get by!" he bellows,
"I really am not able!"
"Though I pull my shoulder out of joint,
"I cannot get him past this point,
"For it leads unto his stable!"

Then out spake Ulfrid Longbow,⁶
A valiant youth was he
"Lo! I will stand on thy right hand,
"And guard the pass for thee."
And out spake fair Flureeza,⁷
His sister eke was she,
"I will abide on thy other side,
"And turn thy steed for thee."

And now commenced a struggle
Between that steed and rider,

⁴a full account of the history and misfortune of these interesting creatures may be found in the first "Lay of Sorrow." page 2333.

⁵it is a singular fact that a donkey makes a point of returning any kicks offered to it.

⁶this valiant knight besides having a heart of steel, and nerves of iron, has been lately in the habit of carrying a brick in his eye.

⁷she was sister to both.

For all the strength that he hath left,
 Doth not suffice to guide her.
 Though Ulfrid and his sister
 Have kindly stopped the way,
 And all the crowd have cried aloud,
 "We ca'n't wait here all day!"
 Round turned he, as not deigning
 Their words to understand,
 But he slipped the stirrups from his feet,
 The bridle from his hand
 And grasped the mane full lightly,
 And vaulted from his seat,
 And gained the road in triumph,⁸
 And stood upon his feet.
 All firmly till that moment
 Had Ulfrid Longbow stood,
 And faced the foe right valiantly,
 As every warrior should.
 But when safe on terra firma
 His brother he did spy,
 "What *did* you do that for?" he cried,
 Then unconcerned he stepped aside
 And let it canter by.
 They gave him bread and butter,⁹
 That was of public right,
 As much as four strong rabbits,
 Could munch from morn to night.
 For he'd done a deed of daring,
 And faced that savage steed,
 And therefore cups of coffee sweet,
 And everything that was a treat,
 Were but his right and meed.
 And often in the evenings,
 When the fire is blazing bright,
 When books bestrew the table,
 And moths obscure the light,
 When crying children go to bed,
 A struggling, kicking load,
 We'll talk of Ulfrid Longbow's deed,
 How, in his brother's utmost need,
 Back to his aid he flew with speed,
 And how he faced the fiery steed,
 And kept the New Croft Road.

⁸the reader will probably be at a loss to discover the nature of this triumph, as no object was gained, and the donkey was obviously the victor, on this point however, we are sorry to say, we can offer no good explanation.

⁹much more acceptable to a true knight than "cornland" which the Roman people were so foolish as to give to their daring champion, Horatius.

18.35 First, the fish must be caught

Source: Through the Looking Glass (extracted)

“First, the fish must be caught.”
That is easy: a baby, I think, could have caught it.
“Next, the fish must be bought.”
That is easy: a penny, I think, would have bought it.
“Now cook me the fish!”
That is easy, and will not take more than a minute.
“Let it lie in a dish!”
That is easy, because it already is in it.
“Bring it here! Let me sup!”
It is easy to set such a dish on the table.
“Take the dish-cover up!”
Ah, *that* is so hard that I fear I’m unable!
For it holds it like glue—
Holds the lid to the dish, while it lies in the middle:
Which is easiest to do,
Un-dish-cover the fish, or dishcover the riddle?

Solution:

Get an oyster-knife strong,
Insert it 'twixt cover and dish, in the middle;
Then you shall before long
Un-dish-cover the OYSTERS—dishcover the riddle!

(From: *Fun*, October 30, 1878, <https://ufdc.ufl.edu/UF00078627/00033/161j>,
written with some help by Lewis Carroll)

18.36 Five Fathom Square the Belfry Frowns

Source: The New Belfry (extracted)

Parody on *The Tempest* by William Shakespeare

Five fathom square the Belfry frowns;
All its sides of timber made;
Painted all in greys and browns;
Nothing of it that will fade.
Christ Church may admire the change—
Oxford thinks it sad and strange.
Beauty's dead! Let's ring her knell.
Hark! now I hear them—ding-dong, bell.

18.37 A Game of Fives

Source: Rhyme? and Reason?

The text of the original manuscript with subtitle “being a panoramic view of life, by a once careless bachelor” and other minor differences (“from five years old to one”, “Five showy girls” instead of “winsome”, “I ask ‘Now which of them d’you mean?’”, “but if the men will *not* propose, whatever can be done?”, “Five dressy girls” instead of “showy”, next lines missing, “to feel he knows”) can be found in *Letters*

Five little girls, of Five, Four, Three, Two, One:
Rolling on the hearthrug, full of tricks and fun.
Five rosy girls, in years from Ten to Six:
Sitting down to lessons—no more time for tricks.
Five growing girls, from Fifteen to Eleven:
Music, Drawing, Languages, and food enough for seven!
Five winsome girls, from Twenty to Sixteen:
Each young man that calls, I say “Now tell me which you *mean!*”
Five dashing girls, the youngest Twenty-one:
But, if nobody proposes, what is there to be done?
Five showy girls—but Thirty is an age
When girls may be *engaging*, but they somehow don’t *engage*.
Five dressy girls, of Thirty-one or more:
So gracious to the shy young men they snubbed so much before!

* * * * *

Five *passé* girls—Their age? Well, never mind!
We jog along together, like the rest of human kind:
But the quondam “careless bachelor” begins to think he knows
The answer to that ancient problem “how the money goes”!

“Now tell me which you *mean!*”

18.38 Verses for Christmas Cards

Source: manuscript written 1879 for three Christmas cards with drawings by E. Gertrude Thomson, but not published as such

Fly swiftly, gentle Monster! Bear me hence.
Grim Caliban shall work thee no offence.

I bring thee tales of other Hours—of Minutes rolled away—
And long-forgotten legends of a far-off Yesterday.

No budding beaks have they, no downy vest:
Then let us pity them, and guard their rest.

July 1/79

18.39 Tears

Source: Rectory Magazine

For more than sixty years,
Less than a hunderd,
I lived in sighs and tears
And often wondered,
If I should ever be
An indiwiddle,
Brim-full of jollity,
Playing a fiddle.
I played a broken fife,
And sung in a dull key.
Thus I remained for life,
Wretched and sulky.

18.40 Four frantic Members

Source: Twelve Months in a Curatorship (extracted)
Parody on *Ten Little Niggers*

Four frantic Members of a chosen *Committee*!
One of them resigned—then there were Three.
Three thoughtful Members: they may pull us through!
One was invalided—then there were Two.
Two tranquil Members: much may yet be done!
But they never came together, so I had to work with One.

18.41 The Spell

Source: The Walking-Stick of Destiny (extracted, from image)

From a window thrown,
To the ground he fell,
Yet he broke no bone,
He's alive and well!
And the poisoned sip
Of the offered cup,
Hath missed his lip,
He hath ta'en no sup!
Yet, Signor, beware,
Or thou shalt rue!
There is much to dare,
There is much to do!
The time comes quick,
When thou shall see
The Walk...

18.42 Hiawatha's Photographing (early version)

Source: The Train, December 1857 (with minor differences as noted);
Phantasmagoria
Parody on *The Song of Hiawatha* by Henry Wadsworth Longfellow

Other version:
→ 18.43, p. 2074

[In¹ these days of imitation, I can claim no sort of merit for this slight attempt at doing what is known to be so easy. Any one who² knows what verse is, with the slightest³ ear for rhythm, can throw off a composition in the⁴ easy running metre of⁵ 'The Song of Hiawatha.' Having, then, distinctly stated that I challenge no attention, in the following little poem, to its merely verbal jingle, I must beg the candid reader, to confine his criticism, to its treatment of the subject.]

From his shoulder Hiawatha
Took the camera of rosewood,
Made of sliding, folding rosewood;
Neatly put it all together.
In its case it lay compactly,
Folded into nearly nothing;
But he opened out the hinges,
Pushed and pulled the joints and hinges,
Till it looked all squares and oblongs,
Like a complicated figure
In the second book of Euclid.

This he perched upon a tripod,
And the family in order
Sat before him for their pictures.
Mystic, awful was the process.

First, a piece of glass he coated
With Collodion, and plunged it
In a bath of Lunar Caustic
Carefully dissolved in water:
There he left it certain minutes.

Secondly, my Hiawatha
Made with cunning hand a mixture
Of the acid Pyro-gallic.
And of Glacial Acetic,
And of Alcohol and water:
This developed all the picture.

Finally, he fixed each picture
With a saturate solution
Of a certain salt of Soda—⁶

¹Introduction by the Author:—In

²that

³smallest

⁴an

⁵like

⁶Which was made of hyposulphite,

⌊Chemists call it Hyposulphite.⁷

(Very difficult the name is
For a metre like the present,
But periphrasis has done it.)

All the family in order
Sat before him for their pictures.
Each in turn, as he was taken,
Volunteered his own suggestions,
His invaluable suggestions.

First the Governor, the Father:
He suggested velvet curtains
Looped about a massy pillar;
And the corner of a table,
Of a rosewood dining-table.
He would hold a scroll of something,
Hold it firmly in his left-hand;
He would keep his right-hand buried
(Like Napoleon) in his waistcoat;
He would ⌊contemplate⁸ the ⌊distance⁹
With a look of pensive meaning,
As of ducks that die in tempests.

Grand, heroic was the notion:
Yet the picture failed entirely:
Failed, because he moved a little,
Moved, because he couldn't help it.

Next, his better half took courage;
She would have her picture taken;
She came dressed beyond description,
Dressed in jewels and in satin
Far too gorgeous for an empress.
Gracefully she sat down sideways,
With a simper scarcely human,
Holding in her hand a nosegay
Rather larger than a cabbage.
All the while that she was taking,
Still the lady chattered, chattered,
Like a monkey in the forest.
"Am I sitting still?" she asked him.
"Is my face enough in profile?
Shall I hold the nosegay higher?
Will it come into the picture?"

⁷Which, again, was made of soda.

⁸gaze upon

⁹Additional lines:

(Like a poet seeing visions,
Like a man that plots a poem,
In a dressing-gown of damask,
At 12:30 in the morning,
Ere the servants bring in luncheon)—

And the picture failed completely.

Next the Son, the Stunning-Cantab:
He suggested curves of beauty,
Curves pervading all his figure,
Which the eye might follow onward,
Till they centered in the breast-pin,
Centered in the golden breast-pin.
He had learnt it all from Ruskin
(Author of 'The Stones of Venice,
'Seven Lamps of Architecture,
Modern Painters,' and some others);
And perhaps he had not fully
Understood his author's meaning;
But, whatever was the reason,
All was fruitless, as the picture
Ended in an utter failure.

Next to him¹⁰ the eldest daughter:
She suggested very little;
Only asked if he would take her¹¹
With her look of 'passive beauty.'

Her idea of passive beauty
Was a squinting of the left-eye,
Was a drooping of the right-eye,
Was a smile that went up sideways
To the corner of the nostrils.

Hiawatha, when she asked him,
Took no notice of the question,
Looked as if he hadn't heard it;
But, when pointedly appealed to,
Smiled in his¹² peculiar manner,
Coughed and said it 'didn't matter,'
Bit his lip¹³ and changed the subject.

Nor in this was he mistaken,
As the picture failed completely.
So in turn the other sisters.¹⁴

¹⁰After him

¹¹begged she might be taken

¹²a

¹³lips

¹⁴daughters

Additional lines:

All of them agreed in one thing,
That their pictures came to nothing,
Though they differed in their causes,
From the eldest, Grinny-haha,
Who, throughout her time of taking,
Shook with sudden, causeless laughter,
With a fit of silent laughter,
To the youngest, Dinny-wawa,
Who, throughout her time of taking,
Shook with sudden, causeless weeping—
Anything but silent weeping;

Last, the youngest son was taken:¹⁵
Very rough and thick his hair was,
Very round and red his face was,
Very dusty was his jacket,
Very fidgetty his manner.
And¹⁶ his overbearing sisters
Called him names he disapproved of:
Called him Johnny, 'Daddy's Darling,'
Called him Jacky, 'Scrubby School-boy.'
And, so awful¹⁷ was the picture,
In comparison the others
Might be thought to have succeeded,
To have partially succeeded.

Finally my Hiawatha
Tumbled all the tribe together,
('Grouped' is not the right expression,)
And, as happy chance would have it,
Did at last obtain a picture
Where the faces all succeeded:
Each came out a perfect likeness.

Then they joined and all abused it,
Unrestrainedly abused it,
As 'the worst and ugliest picture
They could possibly have dreamed of.¹⁸
Giving one such strange expressions!
Sulkiness, conceit, and meanness!
Really any one would take us
(Any one that did not know us)
For the most unpleasant people?
(Hiawatha seemed to think so,
Seemed to think it not unlikely.)
All together rang their voices,
Angry, loud, discordant voices,
As of dogs that howl in concert,
As of cats that wail in chorus.

But my Hiawatha's patience,
His politeness, and his patience¹⁹,
Unaccountably had vanished,
And he left that happy party.²⁰

And their pictures failed completely.

¹⁵Additional verse:

"John" his Christian name had once been;

The next four lines are swapped with the four lines after them.

¹⁶But

¹⁷fearful

¹⁸That could possibly be taken.

¹⁹manners

²⁰Verses instead of this:

Not a minute more he waited,

Neither did he leave them slowly,
With the calm deliberation,
That intense deliberation
Which photographers aspire to:
But he left them in a hurry,
Left them in a mighty hurry²¹,
Vowing²² that he would not stand it.
Hurriedly he packed his boxes,²³
Hurriedly the porter trundled
On a barrow all his boxes;
Hurriedly he took his ticket,
Hurriedly the train received him:
Thus departed Hiawatha.

But, to use his own expression,
His American expression,
Packed his traps, and "sloped for Texas."

²¹passion

²²Stating

²³Verses instead of this and all the following:

Stating, in emphatic language,
What he'd be before he'd stand it.

18.43 Hiawatha's Photographing (later version)

Parody on *The Song of Hiawatha* by Henry Wadsworth Longfellow

Other version:

→ 18.42, p. 2069

[In an age of imitation, I can claim no special merit for this slight attempt at doing what is known to be so easy. Any fairly practised writer, with the slightest ear for rhythm, could compose, for hours together, in the easy running metre of 'The Song of Hiawatha.' Having, then, distinctly stated that I challenge no attention in the following little poem to its merely verbal jingle, I must beg the candid reader to confine his criticism to its treatment of the subject.]

From his shoulder Hiawatha
Took the camera of rosewood,
Made of sliding, folding rosewood;
Neatly put it all together.
In its case it lay compactly,
Folded into nearly nothing;
But he opened out the hinges,
Pushed and pulled the joints and hinges,
Till it looked all squares and oblongs,
Like a complicated figure
In the Second Book of Euclid.

This he perched upon a tripod—
Crouched beneath its dusky cover—
Stretched his hand, enforcing silence—

Said "Be motionless, I beg you!"
Mystic, awful was the process.

All the family in order
Sat before him for their pictures:
Each in turn, as he was taken,
Volunteered his own suggestions,
His ingenious suggestions.

First the Governor, the Father:
He suggested velvet curtains
Looped about a massy pillar;
And the corner of a table,
Of a rosewood dining-table.
He would hold a scroll of something,
Hold it firmly in his left-hand;
He would keep his right-hand buried
(Like Napoleon) in his waistcoat;
He would contemplate the distance
With a look of pensive meaning,
As of ducks that die in tempests.

Grand, heroic was the notion:
Yet the picture failed entirely:
Failed, because he moved a little,
Moved, because he couldn't help it.

Next, his better half took courage;
She would have her picture taken.
She came dressed beyond description,
Dressed in jewels and in satin
Far too gorgeous for an empress.
Gracefully she sat down sideways,
With a simper scarcely human,
Holding in her hand a bouquet
Rather larger than a cabbage.
All the while that she was sitting,
Still the lady chattered, chattered,
Like a monkey in the forest.
"Am I sitting still?" she asked him.
"Is my face enough in profile?
Shall I hold the bouquet higher?
Will it come into the picture?"
And the picture failed completely.

Next the Son, the Stunning-Cantab:
He suggested curves of beauty,
Curves pervading all his figure,
Which the eye might follow onward,
Till they centered in the breast-pin,
Centered in the golden breast-pin.
He had learnt it all from Ruskin
(Author of 'The Stones of Venice,'
'Seven Lamps of Architecture,'
'Modern Painters,' and some others);

“First the Governor, the Father”

And perhaps he had not fully
 Understood his author's meaning;
 But, whatever was the reason,
 All was fruitless, as the picture
 Ended in an utter failure.

“Next the Son, the Stunning-Cantab”

Next to him the eldest daughter:
 She suggested very little,
 Only asked if he would take her
 With her look of ‘passive beauty.’
 Her idea of passive beauty
 Was a squinting of the left-eye,
 Was a drooping of the right-eye,
 Was a smile that went up sideways
 To the corner of the nostrils.
 Hiawatha, when she asked him,
 Took no notice of the question,

Looked as if he hadn't heard it;
But, when pointedly appealed to,
Smiled in his peculiar manner,
Coughed and said it 'didn't matter,'
Bit his lip and changed the subject.
Nor in this was he mistaken,
As the picture failed completely.
So in turn the other sisters.

"Next to him the eldest daughter"

Last, the youngest son was taken:
Very rough and thick his hair was,
Very round and red his face was,
Very dusty was his jacket,
Very fidgety his manner.
And his overbearing sisters
Called him names he disapproved of:
Called him Johnny, 'Daddy's Darling,'

Called him Jacky, 'Scrubby School-boy.'
And, so awful was the picture,
In comparison the others
Seemed, to one's bewildered fancy,
To have partially succeeded.

"Last, the youngest son was taken"

Finally my Hiawatha
Tumbled all the tribe together,
(‘Grouped’ is not the right expression),
And, as happy chance would have it,
Did at last obtain a picture
Where the faces all succeeded:
Each came out a perfect likeness.

Then they joined and all abused it,
Unrestrainedly abused it,
As the worst and ugliest picture
They could possibly have dreamed of.

Giving one such strange expressions—
Sullen, stupid, pert expressions.
Really any one would take us
(Any one that did not know us)
For the most unpleasant people!
(Hiawatha seemed to think so,
Seemed to think it not unlikely).
All together rang their voices,
Angry, loud, discordant voices,
As of dogs that howl in concert,
As of cats that wail in chorus.
But my Hiawatha's patience,
His politeness and his patience,
Unaccountably had vanished,
And he left that happy party.
Neither did he leave them slowly,
With the calm deliberation,
The intense deliberation
Of a photographic artist:
But he left them in a hurry,
Left them in a mighty hurry,
Stating that he would not stand it,
Stating in emphatic language
What he'd be before he'd stand it.
Hurriedly he packed his boxes:
Hurriedly the porter trundled
On a barrow all his boxes:
Hurriedly he took his ticket:
Hurriedly the train received him:
Thus departed Hiawatha.

18.44 From the air do they come?

Source: written for Florence Louise Beaton, 1876

From the air do they come?
Little voices that tell
Of "boo" and of "jum,"
Ringing clear like a bell—
"Even here," they repeat,
Now and then, when it's dark,
Chance will aid you to meet,
Even here, with a Snark!

Sep. 2, 1876

Acrostic: Florence

18.45 Fury said to a mouse

Source: Alice's Adventures in Wonderland (extracted, formatted)

Fury said to a mouse,
That he met in the house,
“Let us both go to law:
I will prosecute *you*.—

Come, I'll take no denial;
We must have ¹the trial;
For really this morning
I've nothing to do.”

Said the mouse to the cur,
“Such a trial, dear sir,
With no jury or judge,
would be wasting our breath.”

“I'll be judge, I'll be jury,”
Said cunning old Fury:
“I'll try the whole cause,
and condemn you to death”.

18.46 Girlie to whom in perennial bloom

Source: inscribed into a book for Gladys Baly, perhaps 1895

Girlie to whom in perennial bloom
Life is all "Os" and no crosses:
Artists may take other themes for their skill,
Dreaming of fairyland just as they will;
You desire nothing but horses.

Sunbeams may glance, happy midges may dance,
Brooks prattle on in their courses;
Artists may paint just whatever they please,
Landscapes and Seascapes and Mountains and Trees;
You are content with your horses.

Acrostic: Gladys Baly

18.47 Girt with a Boyish Garb

Source: *The Hunting of the Snark* (dedication, with minor differences as noted);
Rhyme? and Reason? (dedication)

The text of the original manuscript with one more difference (“the tale to ask / That he delights to tell”) and signature “Lewis Carroll. Christ Church. October 25, 1875” can be found in *Letters*

Inscribed to a dear Child: in memory of golden summer hours and whispers of a summer sea.

Girt with a boyish garb for boyish task,
Eager she wields her spade: yet loves as well
Rest on a friendly knee, intent to ask
The tale _{one}¹ loves to tell.

Rude _{scoffer}² of the seething outer strife,
Unmeet to read her pure and simple spright,
Deem, if _{thou wilt}³, such hours a waste of life,
Empty of all delight!

Chat on, sweet Maid, and rescue from annoy
Hearts that by wiser talk are unbeguiled;
Ah, happy he who owns that tenderest joy,
The heart-love of a child!

Away, fond thoughts, and vex my soul no more!
Work claims my wakeful nights, my busy days,
Albeit bright memories of that sunlit shore
Yet haunt my dreaming gaze!

18.48 Dedicated to a tea-tea. Why? Oh, when?

Source: written for Atty Owen, March 16, 1880

“Te veniente die, te decedente canemus.”

“From dawn to decline of day, of tea we will utter the praises.”

Quoted from
Georgics by Virgil
(slightly modified and
with fake translation)

Give tea to my First: 'tis as round as a ball:
And, when stunted & small,
I ca'n't spare it at all.

Give tea to my Second: 'tis quite the best way
For concluding delay
When you don't want to stay.

Give tea to my Third: 'tis a name I assign
To plate, pictures, or wine,
Which is yours and not mine.

Give no tea to my Whole: it will keep her awake,
And her small head will ache,
And a riot she'll make,
Till, for quietness' sake,
You supply her with cake.

Lewis Carroll. Mar. 16, 1880

18.49 Screams

Source: Rectory Magazine

Grim was the scowl of his face that day,
As he led me by the wrist:
Ever and anon he paused on the way,
And beat me with his fist.

Dread was the sneer of his evil leer,
Dread was the glance of his eye,
My heart within me shrunk for fear,
And my parched mouth was dry.

With massive club he beat me down,
He kicked me as I lay,
And cried, "get up you lazy clown,
'Don't keep me here all day!'"

A rascal by me chanced to rove,
I would I could have shot him!
He asked another, "Who's that cove?
'And why's the Peeler¹ got him?"

His friend replied, as on they went,
"He's rather gone in liquor,
'He prigged the shiners² off a gent,
'And neatly nabbed his ticker."³

18.50 The Valley of the Shadow of Death

Source: Phantasmagoria (with minor differences as noted); Three Sunsets

Hark, *said the dying man, and sighed,*
To that complaining tone—
Like sprite condemned, each eventide,
To walk the world alone.
At sunset, when the air is still,
I hear it creep from yonder hill:
It breathes upon me, dead and chill,
A moment, and is gone.

My son, it minds me of a day
Left half a life behind,
That I have prayed to put away
For ever from my mind.
But bitter memory will not die:
It haunts my soul when none is nigh:
I hear its whisper in the sigh
Of that complaining wind.

And now in death my soul is fain
To tell the tale of fear
That ¹hidden in my breast hath lain
Through many a weary year:
Yet time would fail to utter all—
The evil spells that held me thrall,
And thrust my life from fall to fall,
Thou needest not to hear.

The spells that bound me with a chain,
Sin's stern behests to do,
Till Pleasure's self, invoked in vain,
A heavy burden grew—
Till from my spirit's fevered eye,
A hunted thing, I seemed to fly
Through the dark woods that underlie
Yon mountain-range of blue.

Deep in those woods I found a vale
No sunlight visiteth,
Nor star, nor wandering moonbeam pale;
Where never comes the breath
Of summer-breeze—there in mine ear,
Even as I lingered half in fear,
I heard a whisper, cold and clear,
“This is the gate of Death.

“O bitter is it to abide
In weariness alway:

¹secret

At dawn to sigh for eventide,
 At eventide for day.
 Thy noon hath fled²: thy sun hath shone.
 The brightness of thy day is gone:
 What need to lag and linger on
 Till life be cold and gray?
 "O well," it said, "beneath yon pool,
 In some still cavern deep,
 The fevered brain might slumber cool,
 The eyes forget to weep:
 Within that goblet's mystic rim
 Are draughts of healing, stored for him
 Whose heart is sick, whose sight is dim,
 Who prayeth but to sleep!"
 The evening-breeze went moaning by,
 Like mourner for the dead,
 And stirred, with shrill complaining sigh,
 The tree-tops overhead:
 My guardian-angel seemed to stand
 And mutely wave a warning hand—
 With sudden terror all unmanned,
 I turned myself and fled!
 A cottage-gate stood open wide:
 Soft fell the dying ray
 On two fair children, side by side,
 That rested from their play—
 Together bent the earnest head,
 As ever and anon they read
 From one dear Book: the words they said
 Come back to me to-day.
 Like twin cascades on mountain-stair
 Together wandered down
 The ripples of the golden hair,
 The ripples of the brown:
 While, through the tangled silken haze,
 Blue eyes looked forth in eager gaze,
 More starlike than the gems that blaze
 About a monarch's crown.
 My son, there comes to each an hour
 When sinks the spirit's pride—
 When weary hands forget their power
 The strokes of death to guide:
 In such a moment, warriors say,
 A word the panic-rout may stay,
 A sudden charge redeem the day
 And turn the living tide.

²is passed

I could not see, for blinding tears,
 The glories of the west:
 A heavenly music filled mine ears,
 A heavenly peace my breast.
 "Come unto Me, come unto Me—
 All ye that labour, unto Me—
 Ye heavy-laden, come to Me—
 And I will give you rest."

The night drew onward: thin and blue
 The evening mists arise
 To bathe the thirsty land in dew,
 As erst in Paradise—
 While, over silent field and town,
 The deep blue vault of heaven looked down;
 Not, as of old, in angry frown,
 But bright with angels' eyes.

Blest day! Then first I heard the voice
 That since hath oft beguiled
 These eyes from tears, and bid rejoice
 This heart with anguish wild—
 Thy mother, boy, thou hast not known;
 So soon she left me here to moan—
 Left me to weep and watch, alone,
 Our one beloved child.

Though, parted from my aching sight,
 Like homeward-speeding dove,
 She passed into the perfect light
 That floods the world above;
 Yet our twin spirits, well I know—
 Though one abide in pain below—
 Love, as in summers long ago,
 And evermore shall love.

So with a glad and patient heart
 I move toward mine end:
 The streams, that flow awhile apart,
 Shall both in ocean blend.
 I dare not weep: I can but bless
 The Love that pitied my distress,
 And lent me, in Life's wilderness,
 So sweet and true a friend.

But if there be—O if there be
 A truth in what they say,
 That angel-forms we cannot see
 Go with us on our way;
 Then surely she is with me here,
 I dimly feel her spirit near—
 The morning-mists grow thin and clear,
 And Death brings in the Day.

³Only in *Three Sunsets*

18.51 Three Sunsets

Source: The College Rhymes, November 1861 (as “The Dream of Fame”, with minor differences as noted); Phantasmagoria (with minor differences as noted); Three Sunsets

He saw her once, and in the glance,
A moment's glance of meeting eyes,
His heart stood still in sudden trance:
He trembled with a sweet surprise—
All in the waning light she stood,¹
The star of perfect womanhood.²
That summer-eve his heart³ was light:
With lighter step he trod⁴ the ground:
And life was fairer in his sight,
And music was in every sound:
He blessed the world where there could be
So beautiful a thing as she.
There once again, as evening fell⁵
And stars were peering overhead,
Two lovers met to bid farewell:
The western sun gleamed faint and red,
Lost in a drift of purple cloud
That wrapped him like a funeral-shroud.
Long time the memory of that night—
The hand that clasped, the lips that kissed,
The form that faded from his sight
Slow sinking through the tearful mist—
In dreamy music seemed to roll
Through the dark chambers of his soul.
So after many years he came
A wanderer from a distant shore:

¹“As one that caught, through opening skies,” in *College Rhymes*

²“A distant gleam of Paradise.” in *College Rhymes*

³“soul” in *College Rhymes*

⁴“pressed” in *College Rhymes*

⁵In *College Rhymes* this and the next verse is

But days went by—he found her not:
And years rolled on—she never came:
Though ever, round the fatal spot,
A mocking whisper of her name
In hollow echoes seemed to roll
Through the dark chambers of his soul.
From land to land he sought her face:
To him were neither night nor day:
The phantom he was doomed to chase
Still glided from his touch away:
And life, that once had been so bright,
Seemed but a dream of yesternight.

The street, the house, were still⁶ the same,
 But those he sought⁷ were there no more:
 His burning words, his hopes and fears,
 Unheeded fell on alien ears.

Only the children from their play
 Would pause the mournful tale to hear,
 Shrinking in half-alarm away,
 Or, step by step, would venture near
 To touch with timid curious hands
 That strange wild man from other lands.

He sat beside the busy street,
 There, where he last had seen her face:
 And thronging memories, bitter-sweet,
 Seemed yet to haunt the ancient place:
 Her footfall ever floated near:
 Her voice was ever in his ear.

He sometimes, as the daylight waned
 And evening mists began to roll,
 In half-soliloquy complained
 Of that black shadow on his soul,
 And blindly fanned, with cruel care,
 The ashes of a vain despair.

The summer fled: the lonely man
 Still lingered out the lessening days;
 Still, as the night drew on, would scan
 Each passing face with closer gaze—
 Till, sick at heart, he turned away,
 And sighed “she will not come to-day.”

So by degrees his spirit bent
 To mock its own despairing cry,
 In stern⁸ self-torture to invent
 New luxuries of agony,
 And people⁹ all the vacant space
 With visions of her perfect face.¹⁰

Then for a moment¹¹ she was nigh,
 He heard no step, but she was there;¹²

⁶“yet” in *College Rhymes*

⁷“knew” in *College Rhymes*

⁸strange

⁹“peopled” in *College Rhymes*

¹⁰Additional verse in *College Rhymes*:

That perfect face, whose smile to own
 Men dare to live, and fools to die:
 Dearer than wealth, or power, or throne;
 Sweeter than sweetest harmony:
 That oftenest cheers their lonely lot
 Who live their life and heed it not.

¹¹“Till for a moment” in *Phantasmagoria*, “Sometimes he felt that” in *College Rhymes*

¹²“Won for an instant to his prayer—” in *College Rhymes*

As if an angel suddenly
 Were bodied from the viewless air,
 And all her fine ethereal frame
 Should fade as _lswiftly¹³ as it came.
 So, half in fancy's sunny trance,
 And half in misery's aching void
 With set and stony countenance
 His bitter being he enjoyed,
 And _lthrust¹⁴ for ever from his mind
 The happiness he could not find.
 As when the wretch, in lonely room,
 To selfish death is madly hurled,
 The glamour of that fatal _lfume¹⁵
 Shuts out the wholesome living world—
 So all his _lmanhood's¹⁶ strength and pride
 One sickly dream had swept aside.
_lYea, brother, and we passed him there,¹⁷
 But yesterday, in merry mood,
 And marveled at the lordly air
 That shamed his beggar's attitude,
 Nor heeded that ourselves might be
 Wretches as desperate as he;
 Who let the _lthought¹⁸ of bliss denied
 Make havoc of our life and powers,
 And pine, in solitary pride,
 For peace that never shall be ours,
 Because we will not work and wait
 In trustful patience for our fate.
 And so it chanced once more _lthat¹⁹ she
 Came by the old familiar spot:
 The face he would have died to see
 Bent o'er him, and he knew it not;
 Too rapt in _lselfish²⁰ grief to hear,
 Even when happiness was near.
 And pity filled her gentle breast
 For him that _lwould²¹ not stir nor speak
 The dying crimson of the west,
 That faintly tinged his haggard cheek,
 Fell on her as she stood, and shed
 A glory round the patient head.

¹³“strangely” in *College Rhymes*

¹⁴“shut” in *College Rhymes*

¹⁵mistakenly “fame” in *College Rhymes*

¹⁶“manly” in *College Rhymes*

¹⁷This and the next verse are missing in *College Rhymes*

¹⁸“dream” in *Phantasmagoria*

¹⁹mistakenly “than” in *College Rhymes*

²⁰“brooding” in *College Rhymes*

²¹“could” in *College Rhymes*

„Ah, let him wake!“²² The moments fly:
This awful tryst may be the last.
And see, the tear, that dimmed her eye,
Had fallen on him ere she passed—
She passed: the crimson paled to gray:
And hope departed with the day.
The heavy hours of night went by,
And silence quickened into sound,
And light slid up the eastern sky,
And life began its daily round—
But „light and life“²³ for him were fled:
His name was numbered with the dead.

„Nov., 1861.“²⁴

18.52 Madrigal

Source: sent to Miss May Forshall, 1877

He shouts amain, he shouts again,
 (Her brother, fierce, as bluff King Hal),
“I tell you flat, I shall do that!”
 She softly whispers “‘*May*’ for ‘*shall*’!”
He wistful sighed one eventide
 (Her friend, that made this Madrigal),
“And shall I kiss you, pretty Miss!”
 Smiling she answered “‘*May*’ for ‘*shall*’!”
With eager eyes my reader cries,
 “Your friend must be indeed a val-
-uable child, so sweet, so mild!
 What do you call her?” “May For shall.”

Dec. 24, 1877.

18.53 Far Away

Source: Sylvie and Bruno (extracted, with minor differences as noted); Three Sunsets

He stept so lightly to the land,
All in his manly pride:
He kissed her cheek, he clasped¹ her hand;
Yet still she glanced aside.
“Too gay he seems,” she darkly dreams,
“Too gallant and too gay,
To think of me—poor simple me—
When he is far away!”

“I bring my Love this goodly pearl
Across the seas,” he said:
“A gem to deck the dearest girl
That ever sailor wed!”
She holds² it tight: her eyes are bright:
Her throbbing heart would say
“He thought of me—he thought of me—
When he was far away!”

The ship has sailed into the West:
Her ocean-bird is flown:
A dull dead pain is in her breast,
And she is weak and lone:
Bt³ there’s a smile upon her face,
A smile that seems to say
“He’ll think of me—he’ll think of me—
When he is far away!”

“Though waters wide between us glide,
Our lives are warm and near:
No distance parts two faithful hearts—
Two hearts that love so dear:
And I will trust my sailor-lad,
For ever and a day,
To think of me—to think of me—
When he is far away!”

18.54 Mad Gardener's Song

Source: Sylvie and Bruno, Sylvie and Bruno Concluded (extracted, connected)

He thought he saw an Elephant,
That practised on a fife:
He looked again, and found it was
A letter from his wife.

"At length I realise," he said,
"The bitterness of Life!"

He thought he saw a Buffalo
Upon the chimney-piece:
He looked again, and found it was
His Sister's Husband's Niece.
"Unless you leave this house," he said,
"I'll send for the Police!"

He thought he saw a Rattlesnake
That questioned him in Greek:
He looked again, and found it was
The Middle of Next Week.
"The one thing I regret," he said,
"Is that it cannot speak!"

He thought he saw a Banker's Clerk
Descending from the bus:
He looked again, and found it was
A Hippopotamus:
"If this should stay to dine," he said,
"There won't be much for us!"

He thought he saw a Kangaroo
That worked a coffee-mill:
He looked again, and found it was
A Vegetable-Pill.
"Were I to swallow this," he said,
"I should be very ill!"

He thought he saw a Coach-and-Four
That stood beside his bed:
He looked again, and found it was
A Bear without a Head.
"Poor thing," he said, "poor silly thing!
It's waiting to be fed!"

He thought he saw an Albatross
That fluttered round the lamp:
He looked again, and found it was
A Penny-Postage-Stamp.
"You'd best be getting home," he said:
"The nights are very damp!"

He thought he saw a Garden-Door¹
That opened with a key:
He looked again, and found it was
A Double Rule of Three:
“And all its mystery,” he said,
“Is clear as day to me!”
He thought he saw an Argument
That proved he was the Pope:
He looked again, and found it was
A Bar of Mottled Soap.
“A fact so dread,” he faintly said,
“Extinguishes all hope!”

¹Alternative given in preface (→ 19.14, p. 2480): “a Cormorant / that nestled in a tree.”

18.55 The Three Voices (later version)

Source: Rhyme? and Reason?

Parody on *The Two Voices* by Alfred Lord Tennyson

Other version:

→ 18.205, p. 2434

The First Voice

He trilled a carol fresh and free:
He laughed aloud for very glee:
There came a breeze from off the sea:
It passed athwart the glooming flat—
It fanned his forehead as he sat—
It lightly bore away his hat,
All to the feet of one who stood
Like maid enchanted in a wood,
Frowning as darkly as she could.
With huge umbrella, lank and brown,
Unerringly she pinned it down,
Right through the centre of the crown.
Then, with an aspect cold and grim,
Regardless of its battered rim,
She took it up and gave it him.
A while like one in dreams he stood,
Then faltered forth his gratitude
In words just short of being rude:
For it had lost its shape and shine,
And it had cost him four-and-nine,
And he was going out to dine.
“To dine!” she sneered in acid tone.

“Unerringly she pinned it down”

“To bend thy being to a bone
 Clothed in a radiance not its own!”
 The tear-drop trickled to his chin:
 There was a meaning in her grin
 That made him feel on fire within.
 “Term it not ‘radiance,’” said he:
 “’Tis solid nutriment to me.
 Dinner is Dinner: Tea is Tea.”
 And she “Yea so? Yet wherefore cease?
 Let thy scant knowledge find increase.
 Say ‘Men are Men, and Geese are Geese.’”
 He moaned: he knew not what to say.
 The thought “That I could get away!”
 Stroved with the thought “But I must stay.”
 “To dine!” she shrieked in dragon-wrath.
 “To swallow wines all foam and froth!
 To simper at a table-cloth!
 “Say, can thy noble spirit stoop
 To join the gormandising troop
 Who find a solace in the soup?
 “Canst thou desire or pie or puff?
 Thy well-bred manners were enough,
 Without such gross material stuff.”
 “Yet well-bred men,” he faintly said,
 “Are not unwilling to be fed:
 Nor are they well without the bread.”
 Her visage scorched him ere she spoke:
 “There are,” she said, “a kind of folk
 Who have no horror of a joke.
 “Such wretches live: they take their share
 Of common earth and common air:
 We come across them here and there:
 “We grant them—there is no escape—
 A sort of semi-human shape
 Suggestive of the man-like Ape.”
 “In all such theories,” said he,
 “One fixed exception there must be.
 That is, the Present Company.”
 Baffled, she gave a wolfish bark:
 He, aiming blindly in the dark,
 With random shaft had pierced the mark.
 She felt that her defeat was plain,
 Yet madly strove with might and main
 To get the upper hand again.
 Fixing her eyes upon the beach,

As though unconscious of his speech,
She said "Each gives to more than each."

He could not answer yea or nay:
He faltered "Gifts may pass away."
Yet knew not what he meant to say.

"If that be so," she straight replied,
"Each heart with each doth coincide.
What boots it? For the world is wide."

"He faltered 'Gifts may pass away.'"

"The world is but a Thought," said he:
"The vast unfathomable sea
Is but a Notion—unto me."

And darkly fell her answer dread
Upon his unresisting head,
Like half a hundredweight of lead.

“The Good and Great must ever shun
That reckless and abandoned one
Who stoops to perpetrate a pun.

“The man that smokes—that reads the *Times*—
That goes to Christmas Pantomimes—
Is capable of *any* crimes!”

He felt it was his turn to speak,
And, with a shamed and crimson cheek,
Moaned “This is harder than Bezique!”

But when she asked him “Wherefore so?”
He felt his very whiskers glow,
And frankly owned “I do not know.”

“This is harder than Bezique!”

While, like broad waves of golden grain,
Or sunlit hues on cloistered pane,
His colour came and went again.

Pitying his obvious distress,
Yet with a tinge of bitterness,
She said "The More exceeds the Less."
"A truth of such undoubted weight,"
He urged, "and so extreme in date,
It were superfluous to state."
Roused into sudden passion, she
In tone of cold malignity:
"To others, yea: but not to thee."
But when she saw him quail and quake,
And when he urged "For pity's sake!"
Once more in gentle tone she spake.
"Thought in the mind doth still abide:
That is by Intellect supplied,
And within that Idea doth hide:
"And he, that yearns the truth to know,
Still further inwardly may go,
And find Idea from Notion flow:
"And thus the chain, that sages sought,
Is to a glorious circle wrought,
For Notion hath its source in Thought."
So passed they on with even pace:
Yet gradually one might trace
A shadow growing on his face.

The Second Voice

They walked beside the wave-worn beach;
Her tongue was very apt to teach,
And now and then he did beseech
She would abate her dulcet tone,
Because the talk was all her own,
And he was dull as any drone.
She urged "No cheese is made of chalk":
And ceaseless flowed her dreary talk,
Tuned to the footfall of a walk.
Her voice was very full and rich,
And, when at length she asked him "Which?"
It mounted to its highest pitch.
He a bewildered answer gave,
Drowned in the sullen moaning wave,
Lost in the echoes of the cave.
He answered her he knew not what:
Like shaft from bow at random shot,
He spoke, but she regarded not.
She waited not for his reply,

But with a downward leaden eye
Went on as if he were not by:
Sound argument and grave defence,
Strange questions raised on "Why?" and "Whence?"
And wildly tangled evidence.

When he, with racked and whirling brain,
Feebly implored her to explain,
She simply said it all again.

Wrenched with an agony intense,
He spake, neglecting Sound and Sense,
And careless of all consequence:

"Mind—I believe—is Essence—Ent—
Abstract—that is—an Accident—
Which we—that is to say—I meant—"

When, with quick breath and cheeks all flushed,
At length his speech was somewhat hushed,
She looked at him, and he was crushed.

It needed not her calm reply:
She fixed him with a stony eye,
And he could neither fight nor fly,

While she dissected, word by word,
His speech, half guessed at and half heard,
As might a cat a little bird.

Then, having wholly overthrown
His views, and stripped them to the bone,
Proceeded to unfold her own.

"Shall Man be Man? And shall he miss
Of other thoughts no thought but this,
Harmonious dews of sober bliss?"

"What boots it? Shall his fevered eye
Through towering nothingness descry
The grisly phantom hurry by?"

"And hear dumb shrieks that fill the air;
See mouths that gape, and eyes that stare
And redden in the dusky glare?"

"The meadows breathing amber light,
The darkness toppling from the height,
The feathery train of granite Night?"

"Shall he, grown gray among his peers,
Through the thick curtain of his tears
Catch glimpses of his earlier years,

"And hear the sounds he knew of yore,
Old shufflings on the sanded floor,
Old knuckles tapping at the door?"

"Yet still before him as he flies

“He spake, neglecting Sound and Sense”

"Shall Man be Man?"

One pallid form shall ever rise,
And, bodying forth in glassy eyes
“The vision of a vanished good,
Low peering through the tangled wood,
Shall freeze the current of his blood.”

Still from each fact, with skill uncouth
And savage rapture, like a tooth
She wrenched some slow reluctant truth.

Till, like a silent water-mill,
When summer suns have dried the rill,
She reached a full stop, and was still.

Dead calm succeeded to the fuss,
As when the loaded omnibus
Has reached the railway terminus:

When, for the tumult of the street,
Is heard the engine’s stifled beat,
The velvet tread of porters’ feet.

With glance that ever sought the ground,
She moved her lips without a sound,
And every now and then she frowned.

He gazed upon the sleeping sea,
And joyed in its tranquillity,
And in that silence dead, but she

To muse a little space did seem,
Then, like the echo of a dream,
Harped back upon her threadbare theme.

Still an attentive ear he lent
But could not fathom what she meant:
She was not deep, nor eloquent.

He marked the ripple on the sand:
The even swaying of her hand
Was all that he could understand.

He saw in dreams a drawing-room,
Where thirteen wretches sat in gloom,
Waiting—he thought he knew for whom:

He saw them drooping here and there,
Each feebly huddled on a chair,
In attitudes of blank despair:

Oysters were not more mute than they,
For all their brains were pumped away,
And they had nothing more to say—

Save one, who groaned “Three hours are gone!”
Who shrieked “We’ll wait no longer, John!
Tell them to set the dinner on!”

The vision passed: the ghosts were fled:

He saw once more that woman dread:
He heard once more the words she said.
He left her, and he turned aside:
He sat and watched the coming tide
Across the shores so newly dried.

“He sat and watched the coming tide”

He wondered at the waters clear,
The breeze that whispered in his ear,
The billows heaving far and near,
And why he had so long preferred
To hang upon her every word:
“In truth,” he said, “it was absurd.”

The Third Voice

Not long this transport held its place:
Within a little moment's space

Quick tears were raining down his face.
 His heart stood still, aghast with fear;
 A wordless voice, nor far nor near,
 He seemed to hear and not to hear.
 "Tears kindle not the doubtful spark.
 If so, why not? Of this remark
 The bearings are profoundly dark."
 "Her speech," he said, "hath caused this pain.
 Easier I count it to explain
 The jargon of the howling main,
 "Or, stretched beside some babbling brook,
 To con, with inexpressive look,
 An unintelligible book."
 Low spake the voice within his head,
 In words imagined more than said,
 Soundless as ghost's intended tread:
 "If thou art duller than before,
 Why quittedst thou the voice of lore?
 Why not endure, expecting more?"
 "Rather than that," he groaned aghast,
 "I'd writhe in depths of cavern vast,
 Some loathly vampire's rich repast."
 "Twere hard," it answered, "themes immense
 To coop within the narrow fence
 That rings *thy* scant intelligence."
 "Not so," he urged, "nor once alone:
 But there was something in her tone
 That chilled me to the very bone.
 "Her style was anything but clear,
 And most unpleasantly severe;
 Her epithets were very queer.
 "And yet, so grand were her replies,
 I could not choose but deem her wise;
 I did not dare to criticise;
 "Nor did I leave her, till she went
 So deep in tangled argument
 That all my powers of thought were spent."
 A little whisper inly slid,
 "Yet truth is truth: you know you did."
 A little wink beneath the lid.
 And, sickened with excess of dread,
 Prone to the dust he bent his head,
 And lay like one three-quarters dead.
 The whisper left him—like a breeze
 Lost in the depths of leafy trees—

"He groaned aghast"

Left him by no means at his ease.
Once more he weltered in despair,
With hands, through denser-matted hair,
More tightly clenched than then they were.
When, bathed in Dawn of living red,
Majestic frowned the mountain head,
"Tell me my fault," was all he said.
When, at high Noon, the blazing sky
Scorched in his head each haggard eye,
Then keenest rose his weary cry.
And when at Eve the unpitying sun
Smiled grimly on the solemn fun,
"Alack," he sighed, "what *have* I done?"

"Tortured, unaided, and alone"

But saddest, darkest was the sight,
When the cold grasp of leaden Night

Dashed him to earth, and held him tight.

Tortured, unaided, and alone,
Thunders were silence to his groan,
Bagpipes sweet music to its tone:

“What? Ever thus, in dismal round,
Shall Pain and Mystery profound
Pursue me like a sleepless hound,

“With crimson-dashed and eager jaws,
Me, still in ignorance of the cause,
Unknowing what I broke of laws?”

The whisper to his ear did seem
Like echoed flow of silent stream,
Or shadow of forgotten dream,

The whisper trembling in the wind:
“Her fate with thine was intertwined,”
So spake it in his inner mind:

“Each orbed on each a baleful star:
Each proved the other’s blight and bar:
Each unto each were best, most far:

“Yea, each to each was worse than foe:
Thou, a scared dullard, gibbering low,
AND SHE, AN AVALANCHE OF WOE!”

“Scared dullard, gibbering low”

18.56 The Elections to the Hebdomadal Council

Source: The Elections to the Hebdomadal Council (with introduction missing and other minor differences as noted); Notes by an Oxford Chiel (with minor differences as noted); Phantasmagoria

[In the year 1866, a Letter with the above title was published in Oxford, addressed by Mr. Goldwin Smith¹ to the Senior Censor of Christ Church, with the twofold object of revealing to the University a vast political misfortune which it had unwittingly encountered, and of suggesting a remedy which should at once alleviate the bitterness of the calamity and secure the sufferers from its recurrence. The misfortune thus revealed was no less than the fact that, at a recent election of Members to the Hebdomadal Council, *two* Conservatives had been chosen, thus giving a Conservative majority in the Council; and the remedy suggested was a sufficiently sweeping one, embracing, as it did, the following details:—

1. ‘The exclusion’ (from Congregation) ‘of the non-academical elements which form a main part of the strength of this party domination.’ These ‘elements’ are afterwards enumerated as ‘the parish clergy and the professional men of the city, and chaplains who are without any academical occupation.’
2. The abolition of the Hebdomadal Council.
3. The abolition of the legislative functions of Convocation.

These are all the main features of this remarkable scheme of Reform, unless it be necessary to add

4. ‘To preside over a Congregation with full legislative powers, the Vice-Chancellor ought no doubt to be a man of real capacity.’

But it would be invidious to suppose that there was any intention of suggesting this as a novelty.

The following rhythmical version of the Letter develops its principles to an extent which possibly the writer had never contemplated.]

‘Now is the Winter of our discontent².’

‘Heard ye the arrow hurtle in the sky?
Heard ye the dragon-monster’s deathful cry?’—
Excuse this sudden burst of the Heroic;
The present state of things would vex a Stoic!
And just as Sairey Gamp, for pains within,
Administered a modicum of gin,
So does my mind, when vexed and ill at ease,
Console itself with soothing similes.
The ‘dragon-monster’ (pestilential schism!)
I need not tell you is Conservatism;
The ‘hurtling arrow’ (till we find a better)
Is represented by the present Letter.
’Twas, I remember, but the other day,
Dear Senior Censor, that you chanced to say

¹only in *Phantasmagoria*

²Dr. Wynter, President of St. John’s, one of the recently elected Conservative members of Council.

You thought these party-combinations would
 Be found, "though needful, no unmingled good."
 Unmingled good? They are unmingled ill³!
 I never took to them, and never will⁴—
 What am I saying? Heed it not, my friend:
 On the next page I mean to recommend
 The very dodges that I now condemn
 In the Conservatives! Don't hint to them
 A word of this! (In confidence. Ahem!) }
 Need I rehearse the history of Jowett?
 I need not, Senior Censor, for you know it⁵⁶.
That was the Board Hebdomadal, and oh!
 Who would be free, themselves must strike the blow!
 Let each that wears a beard, and each that shaves.
 Join in the cry 'We never will be slaves!'
 "But can the University afford
 To be a slave to any kind of board?
 A *slave*?" you shuddering ask. "Think you it can, Sir?"
 "*Not at the present moment*," is my answer⁷.
 I've thought the matter o'er and o'er again,
 And given to it all my powers of brain;
 I've thought it out, and this is what I make it,
 (And I don't care a Tory how you take it:)
It may be right to go ahead, I guess:
It may be right to stop, I do confess:
*Also, it may be right to retrogress*⁸. }
 So says the oracle, and, for myself, I
 Must say it beats to fits the one at Delphi!
 To save beloved Oxford from the yoke,
 (For this majority's beyond a joke,)
 We must combine⁹, aye! hold a *caucus*-meeting¹⁰,
 Unless we want to get another beating.
 That they should 'bottle' us is nothing new—
 But shall they bottle us and *caucus* too?
 See the 'fell unity of purpose' now
 With which Obstructives plunge into the row¹¹!

³In a letter on a point connected with the late elections to the Hebdomadal Council you incidentally remarked to me that our combinations for these elections, "though necessary, were not an unmixed good." They are an unmixed evil.'

⁴I never go to a *caucus* without reluctance: I never write a canvassing letter without a feeling of repugnance to my task.'

⁵I need not rehearse the history of the Regius Professorship of Greek.'

⁶"Regius Professor" in the footnote in the original publication and *Notes by an Oxford Chiel*

⁷'The University cannot afford at the present moment to be delivered over as a slave to any non-academical interest whatever.'

⁸'It may be right to go on, it may be right to stand still, or it may be right to go back.'

⁹'To save the University from going completely under the yoke . . . we shall still be obliged to combine.'

¹⁰'Caucus-holding and wire-pulling would still be almost inevitably carried on to some extent.'

¹¹'But what are we to do? Here is a great political and theological party . . . labouring

'Factious Minorities,' we used to sigh—
 'Factious Majorities!' is now the cry.
 'Votes—ninety-two'—no combination here:
 'Votes—ninety-three'—conspiracy, 'tis clear¹²!
 You urge "'Tis but a unit." I reply
 That in that unit lurks their 'unity.'
Our voters often bolt, and often baulk us,
 But then they never, never go to *caucus*!
Our voters can't forget the maxim famous
 '*Semel electum semper eligamus*;
They never can be worked into a ferment
 By visionary promise of preferment,
 Nor taught, by hints of 'Paradise'¹³ beguiled,
 To whisper 'C for Chairman' like a *child*¹⁴¹⁵!
 And thus the friends that we have tempted down
 Oft take the two-o'clock Express for town¹⁶.

This is our danger: this the secret foe
 That aims at Oxford such a deadly blow.
 What champion can we find to save the State,
 To crush the plot? We darkly whisper 'Wait'¹⁷!

My scheme is this: remove the votes of all
 The residents that are not Liberal¹⁸—
 Leave the young Tutors uncontrolled and free,
 And Oxford then shall see—what it shall see.
 What next? Why then, I say, let Convocation
 Be shorn of all her powers of legislation¹⁹.
 But why stop there? Let us go boldly on—
 Sweep everything beginning with a 'Con'
 Into oblivion! Convocation first,
 Conservatism next, and, last and worst,
 '*Concilium Hebdomadale*' must,
 Consumed and conquered, be consigned to dust²⁰!

under perfect discipline and with fell unity of purpose, to hold the University in subjection, and fill her government with its nominees.'

¹²At a recent election to Council, the Liberals mustered ninety-two votes, and the Conservatives ninety-three; whereupon the latter were charged with having obtained their victory by a conspiracy.

¹³Not to mention that, as we cannot promise Paradise to our supporters, they are very apt to take the train for London just before the election.'

¹⁴It is not known to what the word 'Paradise' was intended to allude, and therefore the hint, here thrown out, that the writer meant to recall the case of the late Chairman of Mr. Gathorne Hardy's committee, who had been recently collated to the See of Chester, is wholly wanton and gratuitous.

¹⁵'Mr. Gladstone's' in the footnote in the original publication and *Notes by an Oxford Chiel*

¹⁶A case of this kind had actually occurred on the occasion of the division just alluded to.

¹⁷Mr. Wayte, now President of Trinity, then put forward as the Liberal candidate for election to Council.

¹⁸You and others suggest, as the only effective remedy, that the Constituency should be reformed, by the exclusion of the non-academical elements which form a main part of the strength of this party domination.'

¹⁹I confess that, having included all the really academical elements in Congregation, I would go boldly on, and put an end to the legislative functions of Convocation.'

²⁰This conviction, that while we have Elections to Council we shall not entirely get rid of

And here I must relate a little fable
 I heard last Saturday at our high table:—
 The cats, it seems, were masters of the house,
 And held their own against the rat and mouse:
 Of course the others couldn't stand it long,
 So held a *caucus*, (not, in their case, wrong!)
 And, when they were assembled to a man,
 Uprose an aged rat, and thus began:—
 'Brothers in bondage! Shall we bear to be
 For ever left in a minority?
 With what "fell unity of purpose" cats
 Oppress the trusting innocence of rats!
 So unsuspecting are we of disguise,
 Their machinations take us by surprise²¹—
 Insulting and tyrannical absurdities²²!
 It is too bad by half—upon my word it is!
 For, now that these Con—, cats, I should say, (frizzle 'em!)
 Are masters, they exterminate like Islam²³!
 How shall we deal with them? I'll tell you how:—
 Let none but kittens be allowed to miaow!
 The Liberal kittens seize us but in play,
 And, while they frolic, we can run away:
 But older cats are not so generous,
 Their claws are too Conservative for us!
 Then let *them* keep the stable and the oats,
 While kittens, rats, and mice have all the votes.²⁴

party organization and its evils, leads me to venture a step further, and to raise the question whether it is really necessary that we should have an Elective Council for legislative purposes at all.'

²¹'Sometimes, indeed, not being informed that the wires are at work, we are completely taken by surprise.'

²²'We are without protection against this most insulting and tyrannical absurdity.'

²³'It is as exterminating as Islam.'

²⁴Additional lines in the original publication:

Now, having thus included in the house,
 All real elements of cat and mouse,
 I would go on, and (though with some compunction)
 Deprive them of their legislative function.
 "'Twas but the other day that Pussy bounced
 Into the Kitchen—wholly unannounced—
 Upset the Poker, and (alas my friends!)
 Brought several Beedles to untimely ends!
 "Now, theoretically, Pussy's got
 So large a body, clearly she could not
 A tenth of it into a mouse-hole stuff:
 But, place her in a building large enough—
 Let the most eminent among the rats
 Address that cunningest of cunning cats—
 She scarce could fail (this is no idle vision)
 To reach at last a rational decision.

The last line has the footnote: 'Theoretically Convocation is a body so large that scarcely a tenth part of it could get into the Convocation House . . . which, if it could be brought together in a building large enough to hold it, and addressed by its most eminent members, might possibly come to a reasonable decision.'

‘Yes; banish cats! The kittens would not use
Their powers for blind obstruction²⁵, nor refuse
To let us sip the cream and gnaw the cheese—
How glorious then would be our destinies²⁶!
Kittens and rats would occupy the throne,
And rule the larder for itself alone²⁷!’

So rhymed my friend, and asked me what I thought of it.
I told him that so much as I had caught of it
Appeared to me (as I need hardly mention)
Entirely undeserving of attention.

But now, to guide the Congregation, when
It numbers none but really ‘able’ men,
A ‘*Vice-Cancellarius*’ will be needed
Of every kind of human weakness weeded!
Is such the president that we have got?
He ought no doubt to be; why should he not²⁸?

I do not hint that Liberals should dare
To oust the present holder of the chair—
But surely he would not object to be
Gently examined by a Board of three?
Their duty being just to ascertain
That he’s ‘all there’ (I mean, of course, in brain),
And that his mind, from ‘petty details’ clear,
Is fitted for the duties of his sphere.

All this is merely moonshine, till we get
The seal of Parliament upon it set.
A word then, Senior Censor, in your ear:
The Government is in a state of fear—
Like some old gentleman, abroad at night,
Seized with a sudden shiver of affright,
Who offers money, on his bended knees,
To the first skulking vagabond he sees—
Now is the lucky moment for our task;
They daren’t refuse us anything we ask²⁹!

And then our Fellowships shall open be
To Intellect, no meaner quality!
No moral excellence, no social fitness
Shall ever be admissible as witness.

²⁵‘Their powers would scarcely be exercised for the purposes of fanaticism, or in a spirit of blind obstruction.’

²⁶‘These narrow local bounds, within which our thoughts and schemes have hitherto been pent, will begin to disappear, and a far wider sphere of action will open on the view.’

²⁷‘Those councils must be freely opened to all who can serve her well and who will serve her for herself.’

²⁸‘To preside over a Congregation with full legislative powers, the Vice-Chancellor ought no doubt to be a man of real capacity; but why should he not? His mind ought also, for this as well as for his other high functions, to be clear of petty details, and devoted to the great matters of University business; but why should not this condition also be fulfilled?’

²⁹‘If you apply now to Parliament for this or any other University reform, you will find the House of Commons in a propitious mood. . . . Even the Conservative Government, as it looks for the support of moderate Liberals on the one great subject, is very unwilling to present itself in such an aspect that these men may not be able decently to give it their support.’

'Avaunt, dull Virtue!' is Oxonia's cry:
 'Come to my arms, ingenious Villainy!'

For Classic Fellowships, an honour high,
 Simonides and Co. will then apply—
 Our Mathematics will to Oxford bring
 The 'cutest members of the betting-ring—
 Law Fellowships will start upon their journeys
 A myriad of unscrupulous attorneys—
 While poisoners, doomed till now to toil unknown,
 Shall mount the Physical Professor's throne!
 To what a varied feast of learning then
 Should we invite our intellectual men!
 Professor Caseley should instruct our flock
 To analyse the mysteries of Locke—
 Barnum should lecture them on Rhetoric—
 The Davenports upon the cupboard-trick—
 Robson and Redpath, Strahan and Paul and Bates
 Should store the minds of undergraduates—
 From Fagin's lecture-room a class should come
 Versed in all arts of finger and of thumb,
 To illustrate in practice (though by stealth)
 The transitory character of wealth.³⁰
 And thus would Oxford educate, indeed,
 Men far beyond a merely local need—
 With no career before them, I may say³¹,
 Unless they're wise enough to go away,
 And seek, far West, or in the distant East,
 Another flock of pigeons to be fleeced.

I might go on, and trace the destiny
 Of Oxford in an age which, though it be
 Thus breaking with tradition, owns a new
 Allegiance to the intellectual few—
 (I mean, of course, the—pshaw! no matter who!)
 But, were I to pursue the boundless theme,
 I fear that I should seem to you to dream³².

This to fulfil, or even—humbler far—
 To shun Conservatism's noxious star
 And all the evils that it brings behind,
 These pestilential coils must be untwined—
 These party-coils, that clog the march of Mind—
 Choked in whose meshes Oxford, slowly wise,
 Has lain for three disastrous centuries³³.

³⁰missing in *Notes by an Oxford Chiel*

³¹'With open Fellowships, Oxford will soon produce a supply of men fit for the work of high education far beyond her own local demands, and in fact with no career before them unless a career can be opened elsewhere.'

³²'I should seem to you to dream if I were to say what I think the destiny of the University may be in an age which, though it is breaking with tradition, is, from the same causes, owning a new allegiance to intellectual authority.'

³³'But to fulfil this, or even a far humbler destiny—to escape the opposite lot—the pestilential coils of party, in which the University has lain for three disastrous centuries choked,

Away with them! (It is for this I yearn.)
Each twist untwist, each Turner overturn!
Disfranchise each Conservative, and cancel
The votes of Michell, Liddon, Wall, and Mansel!
Then, then shall Oxford be herself again,
Neglect the heart, and cultivate the brain—
Then this shall be the burden of our song,
'All change is good—whatever is, is wrong'—
Then Intellect's proud flag shall be unfurled,
And Brain, and Brain alone, shall rule the world!

must be untwined.'

18.57 Here I bee, and here I byde

Source: The Legend of "Scotland" (extracted)

Here I bee, and here I byde,
Till such tyme as yt betyde
That a Ladye of thys place,
Lyke to mee yn name and face,
(Though my name bee never known,
My initials shall bee shown,
Shall be fotograffed aright—
Hedde and Feet bee both yn sight—
Then my face shall disappear,
Nor agayn affrite you heer.

18.58 A Bachanalian Ode

Source: The Vision of Three T's (extracted)

Parody on *Here's to the Maiden of Bashful fifteen* by Richard Brinsley Sheridan

Here's to the Freshman of bashful eighteen!
Here's to the Senior of twenty!
Here's to the youth whose moustache can't be seen!
And here's to the man who has plenty!
Let the men Pass!
Out of the mass
I'll warrant we'll find you some fit for a Class!
Here's to the Censors, who symbolise Sense,
Just as Mitres incorporate Might, Sir!
To the Bursar, who never expands the expense!
And the Readers, who always do right, Sir!
Tutor and Don,
Let them jog on!
I warrant they'll rival the centuries gone!
Here's to the Chapter, melodious crew!
Whose harmony surely *intends* well:
For, though it commences with 'harm,' it is true,
Yet its motto is 'All's well that ends well'!
'Tis love, I'll be bound.
That makes it go round!
For 'In for a penny is in for a pound'!
Here's to the Governing Body, whose Art
(For they're Masters of Arts to a man. Sir!)
Seeks to beautify Christ Church in every part,
Though the method seems hardly to answer!
With three T's it is graced—
Which letters are placed
To stand for the names of Tact, Talent, and Taste!

18.59 His barque hath perished in the storm

Source: Wilhelm von Schmitz (extracted)

His barque hath perished in the storm,
Whirled by its fiery breath
On sunken rocks, his stalwart form
Was doomed to watery death.

18.60 Yang-ki-ling

Source: Rectory Magazine

His highness Yang-ki-ling,
Great China's mighty king,
Upon his throne was sitting,
Around him courtiers all,
Lay prostrate in the hall,
In attitude most fitting.

“Approach, Feefifum!
‘Great western traveller, come!
‘Of science learned lover!
‘Among my cooks not one,”
Thus spake the crownèd one,
“Can a new dish discover!

‘Of bind-nest soup I'm tired,
‘A dish, though much admired,
‘Which yet well bears omission:
‘Baked puppies and stewed snails,
‘Like oft-related tales,
‘Disgust on repetition!”

He spoke: “Sire,” Fum replied,
“I've travelled far and wide,”
His robe with terror crumpling,
“But in all the world combined
‘No better dish could find,
‘Than an English apple-dumpling!”

18.62 Poeta Fit, Non Nascitur

Source: The College Rhymes, June 1862 (without images, with signature "Oxford. K." and minor differences as noted); Phantasmagoria (without images, with minor differences as noted); Rhyme? and Reason?

“How shall I be a poet?
How shall I write in rhyme?
You told me once ‘the very wish
Partook of the sublime.’
Then tell me how! Don’t put me off
With your ‘another time’!”
The old man smiled to see him,

To hear his sudden sally;
 He liked the lad¹ to speak his mind
 Enthusiastically;
 And thought "There's no hum-drum in him,
 Nor any shilly-shally."
 "And would you be a poet
 Before you've been to school?
 Ah, well! I hardly thought you
 So absolute a fool.
 First learn to be spasmodic—
 A very simple rule.
 "For first you write a sentence,
 And then you chop it small;
 Then mix the bits, and sort them out
 Just as they chance to fall:
 The order of the phrases makes²
 No difference³ at all.
 "Then, if you'd be impressive,
 Remember what I say,
 That abstract qualities begin
 With capitals alway:
 The True, the Good, the Beautiful—
 Those are the things that pay!
 "Next, when you are describing
 A shape, or sound, or tint;
 Don't state the matter plainly,
 But put it in a hint;
 And learn to look at all things
 With a sort of mental squint."
 "For instance, if I wished, Sir,
 Of mutton-pies to tell,
 Should I say 'dreams of fleecy flocks
 Pent in a wheaten cell'?"
 "Why, yes," the old man said: "that phrase
 Would answer very well.
 "Then fourthly, there are epithets
 That suit with any word—
 As well as Harvey's Reading Sauce
 With fish, or flesh, or bird—
 Of these, 'wild,' 'lonely,' 'weary,' 'strange,'
 Are much to be preferred."
 "And will it do, O will it do
 To take them in a lump—
 As 'the wild man went his weary way

¹"boy" in *College Rhymes*

²"that they come in" in *College Rhymes*

³"Don't signify" in *College Rhymes*

To a strange and lonely pump'?"
"Nay, nay! You must not hastily
To such conclusions jump.
"Such epithets, like pepper,
Give zest to what you write;
And, if you strew them sparely,
They whet the appetite:
But if you lay them on too thick,
You spoil the matter quite!

"The wild man went his weary way"

"Last, as to the arrangement:
Your reader, you should show him,
Must take what information he
Can get, and look for no im-
mature disclosure of the drift
And purpose of your poem.

“Therefore, to test his patience—
How much he can endure—
Mention no places, names, or dates,
And evermore be sure
Throughout the poem to be found
Consistently obscure.

“First fix upon the limit
To which it shall extend:
Then fill it up with ‘Padding’
(Beg some of any friend):
Your great SENSATION-STANZA
You place towards the end.”

“And what is a Sensation,
Grandfather, tell me, pray?
I think I never heard the word
So used before to-day:
Be kind enough to mention one
‘*Exempli gratiâ.*’”

And the old man, looking sadly
Across the garden-lawn,
Where here and there a dew-drop
Yet glittered in the dawn,
Said “Go to the Adelphi,
And see the ‘Colleen Bawn.’”

“The word is due to Boucicault—
The theory is his,
Where Life becomes a Spasm,
And History a Whiz:
If that is not Sensation,
I don’t know what it is.

“Now try your hand, ere Fancy
_Have⁴ lost its present glow—”
“And then,” his grandson added,
“We’ll publish it, you know:
Green cloth—gold-lettered at the back—
In duodecimo!”

Then proudly smiled that old man
To see the eager lad
Rush madly for his pen and ink
And for his blotting-pad—
But, when he thought of *publishing*,
His face grew stern and sad.

18.63 Hush-a-by Lady, in Alice's Lap!

Source: Through the Looking Glass (extracted)

Parody on nursery rhyme *Rock-a-bye Baby*

Hush-a-by lady, in Alice's lap!
Till the feast's ready, we've time for a nap:
When the feast's over, we'll go to the ball—
Red Queen, and White Queen, and Alice, and all!

18.64 To my Child-Friend

Source: The Game of Logic (dedication); also printed separately 1888 (with different capitalization)

I harm in vain; for never again,
All keenly of my glance I bend,
 Will Memory, goddess coy,
 Embody for my joy
Departed days, nor let me gaze
 On thee, my Fairy Friend!

Yet could thy face, in mystic grace,
A moment smile on me, 'twould send
 Far-darting rays of light
 From Heaven athwart the night,
By which to read in very deed
 Thy spirit, sweetest Friend!

So may the stream of Life's long dream
Flow gently onward to its end,
 With many a floweret gay,
 Adown its willowy way:
May no sigh vex, no care perplex,
 My loving little Friend!

Acrostic: Climene Mary Holiday (second letters)

18.65 The Palace of Humbug

Source: The Oxford Critic, June 1857 (with minor differences as noted); Mischmasch
Parody on *The Gipsy Girl's Dream (The Bohemian Girl)* by Alfred Bunn

*for the end of 1855.*¹

I dreamt I dwelt in marble halls,
And each damp thing that creeps and crawls
Went wobble-wobble on the walls.

Faint odours of departed cheese,
Blown² on the dank, unwholesome breeze,
Awoke the never-ending sneeze.

Strange pictures decked the arras drear,
Strange characters of woe and fear,
The humbugs of the social sphere.

One showed a vain and noisy prig,
That shouted³ empty words and big
At him that nodded in a wig.

And one, a dotard grim and gray,
Who wasteth childhood's happy day
In work more profitless than play.

Whose icy breast no pity warms,
Whose little victims sit⁴ in swarms,
And slowly sob on lower forms.

And one, a green thyme-honoured Bank,
Where flowers are growing wild and rank,
Like weeds that fringe a poisoned tank.

All birds of evil omen there
Flood with rich Notes⁵ the tainted air,
The witless wanderer to snare.

The fatal Notes neglected fall,
No creature heeds the treacherous call,
For all those goodly Strawn Baits Pall.

The wandering phantom broke and fled,
Straightway I saw within my head
A Vision of a ghostly bed,

Where lay two worn decrepit men,
The fictions of a lawyer's pen,
Who never more might breathe again.

The serving-man of Richard Roe
Wept, inarticulate with woe:

¹only in *Mischmasch*

²Born

³thundered

⁴cower

⁵song

She wept, that waiting on John Doe.
 "Oh rouse," I urged, "the waning sense
 With tales of tangled evidence,
 Of suit, demurrer, and defence."
 "Vain," she replied, "such mockeries:
 For morbid fancies, such as these,
 No suits can suit, no plea can please."
 And bending o'er that man of straw,
 She cried in grief and sudden awe,
 Not inappropriately, "Law!"
 The well-remembered⁶ voice he knew,
 He smiled, he faintly muttered "Sue!"
 (Her very name was legal too.)
 The night was fled, the dawn was nigh:
 A hurricane went raving by,
 And swept the Vision from mine eye.
 Vanished that dim⁷ and ghostly bed,
 (The hangings, tape; the tape was red:)
 'Tis o'er⁸, and Doe and Roe are dead!
 Oh yet my spirit inly crawls,
 What time it shudderingly recalls
 That horrid dream of marble halls!

18.66 I give thee all

Source: Proportionate Representation (extracted) and Syzygies (extracted and formatted)

Parody on *My Heart and Lute* by Thomas Moore

Proportionate Representation

I give thee all, I can no more,
Though small thy share may be:
Two halves, three thirds, and quarters four,
Is all I bring to thee!

Syzygies

I give thee all, I can no more,
Though poor the offering be.
A round duck's egg is all the score
That I can offer thee!

18.67 My Fairy

Source: Useful and Instructive Poetry

I have a fairy by my side
Which says I must not sleep,
When once in pain I loudly cried
It said "You must not weep."
If, full of mirth, I smile and grin,
It says "You must not laugh;"
When once I wished to drink some gin
It said "You must not quaff."
When once a meal I wished to taste
It said "You must not bite;"
When to the wars I went in haste
It said "You must not fight."
"What may I do?" at length I cried,
Tired of the painful task.
The fairy quietly replied,
And said "You must not ask."
Moral: "You mustn't."

18.68 Ye Carpette Knyghte

Source: The Train, March 1856 (without image, with different spelling and punctuation); Phantasmagoria (without image, with different spelling and punctuation); Rhyme? and Reason?

I have a horſe—a ryghte goode horſe—
He doe I envye thoſe
Who ſcoure h^e playne yn headye courſe
Thyl ſoddayne on theyre noſe
They lyghte wyth unexpected force—
It ys—a horſe of clothes.

I have a ſaddel—“Say’ſt thou ſoe?
Wyth ſtyrrippes, Knyghte, to boote?”
I ſayde not that—I anſwere “Noe”—
It lacketh ſuch, I woote:
It ys a mutton-ſaddel, loe!
Parte of h^e fleecye brute.

I have a bytte—a ryghte good bytte—
It ſhall bee ſeene yn tyme.
Y^e jawe of horſe yt wyll not fyte;
Yt uſe ys more ſublyme.
Sayre Syr, how deemeſt thou of yt?
It ys—thys bytte of rhyme.

18.69 Solitude

Source: The Train, March 1856 (with illustration by William M'Connell and minor differences as noted); Phantasmagoria (with different punctuation); Three Sunsets

I love the stillness of the wood:
I love the music of the rill:
I love to couch in pensive mood
Upon some silent hill.

Scarce heard¹, beneath yon arching trees,
The silver-crested ripples pass;
And, like a mimic brook, the breeze
Whispers among the grass.

Here from the world I win release,
Nor scorn of men, nor footstep rude,
Break in to mar the holy peace
Of this great solitude.²

¹Far off

²Additional verse:

Kind nature to the aching heart

Here³ may the silent tears I⁴ weep
 Lull the vexed spirit into rest,
 As infants sob themselves to sleep
 Upon a mother's breast.
 But when the bitter hour is gone,
 And the keen throbbing pangs are still,
 Oh sweetest then to couch alone
 Upon some silent hill!
 To live in joys that once have been,
 To put the cold world out of sight,
 And deck life's drear and barren scene
 With hues of rainbow-light.
 For what to man the gift of breath,
 If sorrow be his lot below;
 If all the day that ends in death
 Be dark with clouds of woe?
 Shall the poor transport of an hour
 Repay long years of sore distress—
 The fragrance of a lonely flower
 Make glad the wilderness?
 Ye golden hours of Life's young spring,
 Of innocence, of love and truth!
 Bright, beyond all imagining,
 Thou fairy-dream of youth!
 I'd give all wealth that years have piled,⁵
 The slow result⁶ of Life's decay,
 To be once more a little child
 For one bright summer-day.⁷

*March 16, 1853.*⁸

Brings sympathies of large relief:
 Full gladly would she bear her part
 In our dull load of grief.

18.70 Upon the Lonely Moor

Source: The Train, October 1856

Other version:
→ 18.82, p. 2161

[It is always interesting to ascertain the sources from which our great poets obtained their ideas: this motive has dictated the publication of the following: painful as its appearance must be to the admirers of Wordsworth and his poem of "Resolution and Independence."]

I met an aged, aged man
 Upon the lonely moor:
I knew I was a gentleman,
 And he was but a boor.
So I stopped and roughly questioned him,
 "Come, tell me how you live!"
But his words impressed my ear no more
 Than if it were a sieve.
He said, "I look for soap-bubbles,
 That lie among the wheat,
And bake them into mutton-pies,
 And sell them in the street.
I sell them unto men," he said,
 "Who sail on stormy seas;
And that's the way I get my bread.
 A trifle, if you please."
But I was thinking of a way
 To multiply by ten,
And always, in the answer, get
 The question back again.
I did not hear a word he said,
 But kicked that old man calm,
And said, "Come, tell me how you live!"
 And pinched him in the arm.
His accents mild took up the tale:
 He said, "I go my ways,
And when I find a mountain-rill,
 I set it in a blaze.
And thence they make a stuff they call
 Rowland's Macassar Oil;
But fourpence-halfpenny is all
 They give me for my toil."
But I was thinking of a plan
 To paint one's gaiters green,
So much the colour of the grass
 That they could not be seen.
I gave his ear a sudden box,
 And questioned him again,
And tweaked his grey and reverend locks,

And put him into pain.
He said, "I hunt for haddock's eyes
Among the heather bright,
And work them into waistcoat-buttons
In the silent night.
And these I do not sell for gold,
Or coin from silver-mine,
But for a copper halfpenny,
And that will purchase nine.
"I sometimes dig for buttered rolls,
Or set limed twigs for crabs;
I sometimes search the flowery knolls
For wheels of Hansom-cabs.
And that's the way" (he gave a wink),
"I get my living here.
And very gladly will I drink
Your honour's health in beer."
I heard him then, for I had just
Completed my design
To keep the Menai bridge from rust
By boiling it in wine.
I duly thanked him, ere I went,
For all his stories queer,
But chiefly for his kind intent
To drink my health in beer.
And now if e'er by chance I put
My fingers into glue,
Or madly squeeze a right-hand foot
Into a left-hand shoe;
Or if a statement I aver
Of which I am not sure,
I think of that strange wanderer
Upon the lonely moor.

18.71 Poetry for the Million

Source: The Comic Times, August 18, 1855 (might have unknown differences);
 Mischmasch
 Parody on *Lalla Rookh* by Thomas Moor

The nineteenth century has produced a new school of music, bearing about the same relation to the genuine article, which the hash or stew of Monday does to the joint of Sunday.

We allude of course to the prevalent practice of diluting the works of earlier composers with washy modern variations, so as to suit the weakened and depraved taste of this generation: this invention is termed “setting” by some, who, scorning the handsome offer of Alexander Smith, to “set this age to music,” have determined to set music to this age.

Sadly we admit the stern necessity that exists for such a change: with stern prophetic eye we see looming in the shadowy Future the downfall of the sister Fine Arts. The National Gallery have already subjected some of their finest pictures to this painful operation: Poetry must follow.

That we may not be behind others in forwarding the progress of Civilization, we boldly discard all personal and private feelings, and with quivering pen and tear-dimmed eye, we dedicate the following composition to the Spirit of the Age, and to that noble band of gallant adventurers, who aspire to lead the Van in the great March of Reform.

18.72 Tèma con Variazióni

Source: Rhyme? and Reason?

Parody on *Lalla Rookh* by Thomas Moor

Other version:

→ 18.71, p. 2147

[Why is it that Poetry has never yet been subjected to that process of Dilution which has proved so advantageous to her sister-art Music? The Diluter gives us first a few notes of some well-known Air, then a dozen bars of his own, then a few more notes of the Air, and so on alternately: thus saving the listener, if not from all risk of recognising the melody at all, at least from the too-exciting transports which it might produce in a more concentrated form. The process is termed “setting” by Composers, and any one, that has ever experienced the emotion of being unexpectedly set down in a heap of mortar, will recognise the truthfulness of this happy phrase.

For truly, just as the genuine Epicure lingers lovingly over a morsel of supreme Venison—whose every fibre seems to murmur “Excelsior!”—yet swallows, ere returning to the toothsome dainty, great mouthfuls of oatmeal-porridge and winkles: and just as the perfect Connoisseur in Claret permits himself but one delicate sip, and then tosses off a pint or more of boarding-school beer: so also—

I never loved a dear Gazelle—
 Nor anything that cost me much:
High prices profit those who sell,
 But why should I be fond of such?

To glad me with his soft black eye
 My son comes trotting home from school;
He’s had a fight, but can’t tell why—
 He always was a little fool!

But, when he came to know me well,
 He kicked me out, her testy Sire:
And when I stained my hair, that Belle,
 Might note the change, and thus admire

And love me, it was sure to dye
 A muddy green or staring blue:
Whilst one might trace, with half an eye,
 The still triumphant carrot through.

18.73 Square Poem

Source: written for the brother of Lady Ure; authorship not certain

I often wondered when I cursed,
Often feared where I would be—
Wondered where she'd yield her love,
When I yield, so will she.
I would her will be pitied!
Cursed be love! She pitied me . . .

18.74 Disillusionized

Source: The College Rhymes, June 1862

A different version (often titled “My Fancy”) can be found in *Life and Letters*, pp. 66–67; with the following differences: “With years” instead of “Her years”, “find they were” instead of “find them”, “a dozen” instead of “two dozen”, “curly” instead of “curling”, “turned” instead “grown”, second verse missing, “And if you were to ask me how”, “believe me” instead of “believe it”.

Parody on *Alice Gray* by William Mee

I painted her a gushing thing—
Her years perhaps a score;
I little thought to find them
At least two dozen more!
My fancy gave her eyes of blue,
A curling auburn head;
I came to find the blue a green,
The auburn grown to red!

I painted her a lip and cheek
In colour like the rose;
I little thought the selfsame hue
Extended to her nose!
I dreamed of rounded features—
A smile of ready glee—
But it was not *fat* I wanted,
Nor a *grin* I hoped to see!

She boxed my ears this morning—
They tingled very much—
I own that I could wish her
A somewhat lighter touch:
And if I were to settle how
Her charms might be improved,
I would not have them added to,
But just a few removed!

She has the bear’s ethereal grace,
The bland hyena’s laugh,
The footstep of the elephant,
The neck of the giraffe:
I love her still—believe it—
Though my heart its passion hides;
She’s all my fancy painted her,
But oh! how much besides!

March 15th, 1862.

18.75 I saw a child: even if blind

Source: sent to Edith Argles, about 1868

I saw a child: even if blind,
I could have seen she was not kind.
“My child,” said I, “don’t make that noise!
Here, choose among this heap of toys.”

She said “I’ve tumbled in the river:
And that’s what makes me shake and shiver.”
“And what’s your name, my child?” said I.
“It’s Juliet, sir,” she made reply.
“You know,” said she, “I hates my pa—
Never says nothing to my ma”—
“My child,” I cried, “you make me sad.
How can you be so very bad?”
At which she laughed in such a way,
I lost my hearing from that day.

Solution: cruel, Dolly; cold, Romeo, unfilial, evil, loadly

18.76 Double Acrostic (Argles)

Source: sent to Miss E. M. Argles, 1869

I sing a place wherein agree
All things on land that fairest be,
All that is sweetest of the sea.
Nor can I break the silken knot
That binds my memory to the spot
And friends too dear to be forgot.

On rocky brow we loved to stand
And watch in silence, hand in hand,
The shadows veiling sea and land.
Then dropped the breeze; no vessel passed:
So silent stood each taper mast,
You would have deemed it chained and fast.

Above the blue and fleecy sky:
Below, the waves that quivering lie,
Like crispèd curls of greenery.
“A sail!” resounds from every lip.
Mizen, no, square-sail—ah, you trip!
Edith, it cannot be a ship!

So home again from sea and beach,
One nameless feeling thrilling each.
A sense of beauty, passing speech.
Let lens and tripod be unslung!
“Dolly!” ’s the word on every tongue;
Dolly must sit, for she is young!
Photography shall change her face,
Distort it with uncouth grimace—
Make her bloodthirsty, fierce, and base.

I end my song while scarce begun;
For I should want, ere all was done,
Four weeks to tell the tale of one:
And I should need as large a hand,
To paint a scene so wild and grand,
As he who traversed Egypt’s land.
What say you, Edith? Will it suit ye?
Reject it, if it fails in beauty:
You know your literary duty!

18.77 After Three Days

Source: The Temple Bar, July 1861 (with minor differences as noted);
Phantasmagoria (with minor differences as noted); Three Sunsets

[Written after visiting Holman Hunt's picture of 'Christ in the Temple.']*¹

I stood within the gate
Of a great temple, 'mid² the living stream
Of worshipers that thronged its regal state
Fair-pictured in my dream.
Jewels and gold were there;
And floors of marble lent a³ crystal sheen
To body forth, as in a lower air,
The wonders of the scene.
Such wild and lavish grace
Had whispers in it of a coming doom;
As richest flowers lie strown⁴ about the face
Of her that waits the tomb.
The wisest⁵ of the land
Had gathered there, three solemn trysting-days,
For high debate: men stood on either hand
To listen and to gaze.
The aged brows were bent,
Bent to⁶ a frown, half thought, and half annoy,
That all their stores of subtlest argument
Were baffled by a boy.
In each averted face
I marked⁷ but scorn and loathing, till mine eyes
Fell upon one that stirred not in his place,
Tranced in a dumb surprise.
Surely within his mind
Strange thoughts are born, until he doubts the lore
Of those old men, blind leaders of the blind,
Whose kingdom is no more.
Surely he sees afar
A day of death the stormy future brings;
The crimson setting of the herald-star
That led the Eastern kings.
Thus, as a sunless deep

Mirrors the shining heights that crown the bay,
 So did my soul create anew in sleep
 The picture seen by day.
 Gazers came and went—
 A restless⁸ hum of voices marked the spot—
 In varying shades of critic discontent
 Prating they knew not what.
 “Where is the comely limb,
 The form attuned in every perfect part,
 The beauty that we should desire in him?”
 Ah! Fools and slow of heart!
 Look into those deep eyes,
 Deep as the grave, and strong with love divine;
 Those tender, pure, and fathomless mysteries,
 That seem to pierce through thine.
 Look into those deep eyes,
 Stirred to unrest by breath of coming strife,
 Until a longing in thy soul arise
 That this indeed were life:
 That thou couldst find Him there,
 Bend at His sacred feet thy willing knee,
 And from thy heart pour out the passionate prayer
 “Lord, let me follow Thee!”
 But see the crowd⁹ divide:
 Mother and sire have found their lost one now:¹⁰
 The gentle voice, that fain would seem to chide
 Whispers “Son, why hast thou”—¹¹
 In tone of sad amaze—¹²
 “Thus dealt with us, that art our dearest thing?
 Behold, thy sire and I, three weary days,
 Have sought thee sorrowing.”
 And I had stayed to hear
 The loving words “How is it that ye sought?”—
 But that the sudden lark, with matins clear,
 Severed the links of thought.
 Then over all there fell
 Shadow and silence; and my dream was fled,
 As fade the phantoms of a wizard’s cell

⁸“busy” in *Temple Bar*

⁹“crowds” in *Temple Bar*

¹⁰“The lost is found; glad parents clasp their boy;” in *Temple Bar*

¹¹“All trembling in its joy,” in *Temple Bar*

¹²In *Temple Bar*, this verse is:

Thrills in the silence: “Son,
 How couldst Thou leave us thus? Our hungry gaze
 Hath yearned to rest on Thee, beloved One,
 Through all these weary days.”

When the dark charm is said.
Yet, in the gathering light,
I lay with half-shut eyes that would not wake,
Lovingly clinging to the skirts of night
For that sweet vision's sake.

18.78 Charade (Amy Hughes)

written for Amy Hughes, about 1871

[Addressed to a child, & made on her name.]

If grass should grow in Pimlico,
With many a flaunting lily;
And crows were mowed from Gloucester Road
Along to Piccadilly—

And down the Strand, with fork in hand,
The cockneys blithe should stream,
To sit in flocks among the cocks,
And feast on curds and cream—

Enquire of me, “What *is* the fun?”
My First he’ll surely name,
And when perplexed, you ask the next,
He’ll answer just the same.

Far other lives the cockney-wives
Enjoy than those who roam:
At eve they sit, when lamps are lit,
Each in her quiet home:

Low purrs the cat upon the mat:
The busy needle flies—
While ragged sock, or tattered frock,
Grows whole before your eyes.

Enquire of me, “What *have* you done?”
My second she will name,
And when, perplexed, you ask the next,
She’ll answer just the same.

With picture planned, with brush in hand,
The Artist sits in trance;
While forms of air, bewitching fair,
Before his vision dance.

“Which English stream doth fairest seem,
Artist?” My Third he’ll name.
And when, perplexed, you ask “Which next?”
He’ll answer just the same.

My whole is—well! I scarce can tell:
’Tis something dear to me.
Yet not alone its claims, I own,
For it is one of three.

If you should meet her, please to greet her
And kiss her in my name;
And when, perplexed, you meet the next,
Pray treat her just the same!

18.79 If Ruth & you

Source: letter written to Effie Mayhew, probably May 1879 (Effie and Ruth Mayhew were photographed on Saturday, May 24, 1879)

If Ruth & you
Come at two,
(Or soon after)
In a state of laughter,
Next Saturday,
You might stay
An hour or so:
And, before you go,
Ruth may sit once more,
As she did before,
For a photograph:
But she mustn't laugh
While it's being done—
That would spoil the fun.
They needn't come
To fetch you home,
If you'll only agree
To walk with me.

18.80 Misunderstandings

Source: Rectory Magazine

If such a thing had been my thought,
I should have told you so before,
But as I didn't, then you ought
To ask for such a thing no more,
For to teach one who has been taught
Is always thought an awful bore.

Now to commence my argument,
I shall premise an observation,
On which the greatest kings have leant
When striving to subdue a nation,
And e'en the wretch who pays no rent
By it can solve a hard equation.

Its truth is such, the force of reason
Can not avail to shake its power,
Yet e'en the sun in summer season
Doth not dispel so mild a shower
As this, and he who sees it, sees on
Beyond it to a sunny bower—
No more, when ignorance is treason,
Let wisdom's brows be cold and sour.

Q. G.

18.81 If thou wouldst view the Belfry aright

Source: The New Belfry (extracted)

Parody on *The Lay of the Last Minstrel* by Walter Scott

If thou wouldst view the Belfry aright,
Go visit it at the mirk midnight—
For the least hint of open day
Scares the beholder quite away.
When wall and window are black as pitch.
And there's no deciding which is which;
When the dark Hall's uncertain roof
In horror seems to stand aloof;
When corner and corner, alternately
Is wrought to an odious symmetry;
When distant Thames is heard to sigh
And shudder as he hurries by;
Then go, if it be worth the while.
Then view the Belfry's monstrous pile.
And, home returning, soothly swear
"Tis more than Job himself could bear!"

18.82 A-sitting on A Gate

Source: Through the Looking Glass (extracted)
Parody on *Resolution and Independence* by William Wordsworth

Other version:
→ 18.70, p. 2145

I'll tell thee everything I can:
 There's little to relate.
I saw an aged aged man,
 A-sitting on a gate.
"Who are you, aged man?" I said.
 "And how is it you live?"
And his answer trickled through my head,
 Like water through a sieve.
He said "I look for butterflies
 That sleep among the wheat:
I make them into mutton-pies,
 And sell them in the street.
I sell them unto men," he said,
 "Who sail on stormy seas;
And that's the way I get my bread—
 A trifle, if you please."
But I was thinking of a plan
 To dye one's whiskers green,
And always use so large a fan
 That they could not be seen.
So, having no reply to give
 To what the old man said,
I cried, "Come, tell me how you live!"
 And thumped him on the head.
His accents mild took up the tale:
 He said "I go my ways,
And when I find a mountain-rill,
 I set it in a blaze;
And thence they make a stuff they call
 Rolands' Macassar-Oil—
Yet twopence-halfpenny is all
 They give me for my toil."
But I was thinking of a way
 To feed oneself on batter,
And so go on from day to day
 Getting a little fatter.
I shook him well from side to side,
 Until his face was blue:
"Come, tell me how you live," I cried,
 "And what it is you do!"
He said "I hunt for haddocks' eyes
 Among the heather bright,

And work them into waistcoat-buttons
 In the silent night.
 And these I do not sell for gold
 Or coin of silvery shine,
 But for a copper halfpenny,
 And that will purchase nine.
 "I sometimes dig for buttered rolls,
 Or set limed twigs for crabs;
 I sometimes search the grassy knolls
 For wheels of Hansom-cabs.
 And that's the way" (he gave a wink)
 "By which I get my wealth—
 And very gladly will I drink
 Your Honour's noble health."
 I heard him then, for I had just
 Completed my design
 To keep the Menai bridge from rust
 By boiling it in wine.
 I thanked him much for telling me
 The way he got his wealth,
 But chiefly for his wish that he
 Might drink my noble health.
 And now, if e'er by chance I put
 My fingers into glue
 Or madly squeeze a right-hand foot
 Into a left-hand shoe,
 Or if I drop upon my toe
 A very heavy weight,
 I weep, for it reminds me so,
 Of that old man I used to know—
 Whose look was mild, whose speech was slow,
 Whose hair was whiter than the snow,
 Whose face was very like a crow,
 With eyes, like cinders, all aglow,
 Who seemed distracted with his woe,
 Who rocked his body to and fro,
 And muttered mumblingly and low,
 As if his mouth were full of dough,
 Who snorted like a buffalo—
 That summer evening, long ago,
 A-sitting on a gate.

18.83 Rhyme? and Reason?

Source: inscribed into a copy of *Rhyme? and Reason?* for Miss Emmie Drury, 1883

“I’m EMInent in RHYME!” she said.

“I make WRY Mouths of RYE-Meal gruel!”

The Poet smiled, and shook his head:

“Is REASON, then, the missing jewel?”

18.84 Beatrice

Source: The College Rhymes, November 1862 (with minor differences as noted);
Phantasmagoria (with different punctuation); Three Sunsets

In her eyes is the living light
Of a wanderer to earth
From a far celestial height:
Summers five are all the span—
Summers five since Time began
To veil in¹ mists of human night
A shining angel-birth.

Does an angel look from her eyes?
Will she suddenly spring away,
And soar to her home in the skies?
Beatrice! Blessing and blessed to be!
Beatrice! Still, as I gaze on thee,
Visions of two sweet maids arise,
Whose life was of yesterday:

Of a Beatrice pale and stern,
With the lips of a dumb despair,
With the innocent eyes that yearn—
Yearn for the young sweet hours of life,
Far from sorrow and far from strife,
For the happy summers, that never return,
When the world seemed good and fair:

Of a Beatrice glorious, bright—
Of a sainted, ethereal maid,
Whose blue eyes are deep fountains of light,
Cheering the poet that broodeth apart,
Filling with gladness his desolate heart,
Like the moon when she shines thro' a cloudless night
On a world of silence and shade.

And the visions waver and faint,
And the visions vanish away
That my fancy delighted to paint—
She is here at my side, a living child,
With the glowing cheek and the tresses wild,
Nor death-pale martyr, nor radiant saint,
Yet stainless and bright as they.

For I think, if a grim wild beast
Were to come from his charnel-cave,
From his jungle-home in the East—
Stealthily creeping with bated breath,
Stealthily creeping with eyes of death—
He would all forget his dream of the feast,

¹dim with

And ²crouch at her feet a slave.
 She would twine her hand in his mane:
 She would prattle in silvery tone,
 Like the tinkle of summer-rain—
 Questioning him with her laughing eyes,
 Questioning him with a glad surprise,
 Till she caught from those fierce eyes again
 The love that lit her own.

 And be sure, if a savage heart,
 In a mask of human guise,
 Were to come on her here apart—
 Bound for a dark and a deadly deed,
 Hurrying past with pitiless speed—
 He would suddenly falter and guiltily start
 At the glance of her pure blue eyes.

 Nay, be sure, if an angel fair,
 A bright seraph undefiled,
 Were to stoop from the trackless air,
 Fain would she linger in glad amaze—
 Lovingly linger to ponder and gaze,
 With a sister's love and a sister's care,
 On the happy, innocent child.

18.85 In stature the Manlet was dwarfish

Source: Sylvie and Bruno Concluded (extracted)

In stature the Manlet was dwarfish—
No burly big Blunderbore he:
And he wearily gazed on the crawfish
His Wifelet had dressed for his tea.
“Now reach me, sweet Atom, my gunlet,
And hurl the old shoelet for luck:
Let me hie to the bank of the runlet,
And shoot thee a Duck!”

She has reached him his minikin gunlet:
She has hurled the old shoelet for luck:
She is busily baking a bunlet,
To welcome him home with his Duck.
On he speeds, never wasting a wordlet,
Though thoughtlets cling, closely as wax,
To the spot where the beautiful birdlet
So quietly quacks.

Where the Lobsterlet lurks, and the Crablet
So slowly and sleepily crawls:
Where the Dolphin’s at home, and the Dablet
Pays long ceremonious calls:
Where the Grublet is sought by the Froglet:
Where the Frog is pursued by the Duck:
Where the Ducklet is chased by the Doglet—
So runs the world’s luck!

He has loaded with bullet and powder:
His footfall is noiseless as air:
But the Voices grow louder and louder,
And bellow, and bluster, and blare.
They bristle before him and after,
They flutter above and below,
Shrill shriekings of lubberly laughter,
Weird wailings of woe!

They echo without him, within him:
They thrill through his whiskers and beard:
Like a teetotum seeming to spin him,
With sneers never hitherto sneered.
“Avengement,” they cry, “on our Foelet!
Let the Manikin weep for our wrongs!
Let us drench him, from toplet to toelet,
With Nursery-Songs!

“He shall muse upon ‘Hey! Diddle! Diddle!’
On the Cow that surmounted the Moon:
He shall rave of the Cat and the Fiddle,

And the Dish that eloped with the Spoon:
And his soul shall be sad for the Spider,
When Miss Muffet was sipping her whey,
That so tenderly sat down beside her,
And scared her away!

“The music of Midsummer-madness
Shall sting him with many a bite,
Till, in rapture of rollicking sadness,
He shall groan with a gloomy delight:
He shall swathe him, like mists of the morning,
In platitudes luscious and limp,
Such as deck, with a deathless adorning,
The Song of the Shrimp!

“When the Ducklet’s dark doom is decided,
We will trundle him home in a trice:
And the banquet, so plainly provided,
Shall round into rose-buds and rice:
In a blaze of pragmatic invention
He shall wrestle with Fate, and shall reign:
But he has not a friend fit to mention,
So hit him again!”

He has shot it, the delicate darling!
And the Voices have ceased from their strife:
Not a whisper of sneering or snarling;
As he carries it home to his wife:
Then, cheerily champing the bunlet
His spouse was so skilful to bake,
He hies him once more to the runlet,
To fetch her the Drake!

18.86 The Path of Roses

Source: The Train, May 1856 (with illustration by C. H. Bennet and minor differences as noted); Phantasmagoria (with minor differences as noted); Three Sunsets

[Written soon after the Crimean War, when the name of Florence Nightingale had already become a household word, dear to all true British hearts.]¹

In the dark silence of an ancient room,
Whose one tall window fronted to the West,
Where, through laced tendrils of a hanging vine,
The sunset-glow was fading into night,
Sat a pale Lady, resting weary hands
Upon a great clasped volume, and her face
Within her hands. Not as in rest she bowed,
But large hot tears were coursing down her cheek,
And her low-panted sobs broke awefully
Upon the sleeping echoes of the night.

Soon she unclasp'd² the volume once again,
And read the words in tone of agony,
As in self-torture, weeping as she read:—

*“He crowns the glory of his race:
He prayeth but in some fit³ place
To meet his foeman face to face:*

*“And, battling for the True, the Right,
From ruddy dawn to purple night,
To perish in the midmost fight:*

*“Where hearts are fierce and hands are strong,⁴
Where peals the bugle loud and long,⁵
Where blood is dropping in the throng:*

*“Still, with a dim and glazing eye,
To watch the tide of victory,
To hear in death the battle-cry:*

*“Then, gathered grandly to his grave,
To rest among the true and brave,
In holy ground, where yew-trees wave:*

*“Where, from church-windows sculptured⁶ fair,
Float out upon the evening air
The note of praise, the voice of prayer:*

*“Where no vain marble mockery
Insults with loud and boastful lie*

¹Only in *Phantasmagoria*

²unclasped

³fair

⁴Where foes are fierce and weapons strong,

⁵Where roars the battle loud and long,

⁶“carven” in *Phantasmagoria*

The simple soldier's memory:

*"Where sometimes little children go,
And read, in whisper'd⁷ accent slow,
The name of him who sleeps below."*

Her voice died out: like one in dreams she sat.
"Alas!" she sighed. "For what can Woman do?
Her life is aimless, and her death unknown:
Hemmed in by social forms she pines in vain.
Man has his work, but what can Woman do?"

And answer came there from the creeping gloom,
The creeping gloom that settled into night:
"Peace! For thy lot is other than a man's:
His is a path of thorns: he beats them down:
He faces death: he wrestles with despair.
Thine is of roses, to adorn and cheer
His lonely life⁸, and hide the thorns in flowers."

She spake again: in bitter tone she spake:
"Aye, as a toy, the puppet of an hour,

Or a fair posy, newly plucked at morn,
But flung aside and withered ere the night."

And answer came there from the creeping gloom,
The creeping gloom that blackened into night:

⁷whispered

⁸barren lot

“So shalt thou be the lamp to light his path,
What time the shades of sorrow close around.”

And, so it seemed to her, an awful light
Pierced slowly through the darkness, orbed, and grew,
Until all passed away—the ancient room—
The sunlight dying through the trellised vine—
The one tall window—all had passed away,
And she was standing on the mighty hills.

Beneath, around, and far as eye could see,
Squadron on squadron, stretched opposing hosts,
Ranked as for battle, mute and motionless.
Anon a distant thunder shook the ground,
The tramp of horses, and a troop shot by—
Plunged headlong in that living sea of men—
Plunged to their death: back from that fatal field
A scattered handful, fighting hard for life,
Broke through the serried lines; but, as she gazed,
They shrank and melted, and their forms grew thin—
Grew pale as ghosts when the first morning ray
Dawns from the East—the trumpet’s brazen blare
Died into silence—and the vision passed—
Passed to a room where sick and dying lay
In long, sad line—there brooded Fear and Pain—
Darkness was there, the shade of Azrael’s wing.
But there was one that ever, to and fro,
Moved with light footfall: purely calm her face,
And those deep steadfast eyes that starred the gloom:
Still, as she went, she ministered to each
Comfort and counsel; cooled the fevered brow
With softest touch, and in the listening ear
Of the pale sufferer whispered words of peace.
The dying warrior, gazing as she passed,
Clasped his thin hands and blessed her. Bless her too,
Thou, who didst bless the merciful of old!

So prayed the Lady, _{watching} tearfully⁷⁹
_{Her gentle moving onward, till the night}¹⁰
Had veiled her wholly, and the vision passed.

Then once again the _{solemn}¹¹ whisper came:
“So in the darkest path of man’s despair,
Where War and Terror shake the troubled earth,
Lies woman’s mission; with unblenching brow
To pass through scenes of _{horror}¹² and affright
Where men grow sick and tremble: unto her
All things are sanctified, for all are good.
Nothing so mean, but shall deserve her care:
Nothing so great, but she may bear her part.

⁹“as with tearful eyes” in *The Train*

¹⁰“She watched her footsteps, till returning night” in *The Train*

¹¹awful

¹²“anguish” in *Phantasmagoria*

No life is vain: each hath his place assigned:
Do thou thy task, and leave the rest to God¹³.”
And there was silence, but the Lady made
No answer, save one deeply-breathed “Amen.”
And she arose, and in that darkening room
Stood lonely as a spirit of the night—
Stood calm and fearless in the gathered night—
And raised her eyes to heaven. There were tears
Upon her face, but in her heart was peace,
Peace that the world nor gives nor takes away!

18.87 In Winter, When the Fields are White

Source: Through the Looking Glass (extracted, connected)

In winter, when the fields are white,
I sing this song for your delight—
In spring, when woods are getting green,
I'll try and tell you what I mean:
In summer, when the days are long,
Perhaps you'll understand the song:
In autumn, when the leaves are brown,
Take pen and ink, and write it down.
I sent a message to the fish:
I told them "This is what I wish."
The little fishes of the sea,
They sent an answer back to me.
The little fishes' answer was
"We cannot do it, Sir, because——"
I sent to them again to say
"It will be better to obey."
The fishes answered with a grin,
"Why, what a temper you are in!"
I told them once, I told them twice:
They would not listen to advice.
I took a kettle large and new,
Fit for the deed I had to do.
My heart went hop, my heart went thump:
I filled the kettle at the pump.
Then some one came to me and said,
"The little fishes are in bed."
I said to him, I said it plain,
"Then you must wake them up again."
I said it very loud and clear:
I went and shouted in his ear.
But he was very stiff and proud:
He said "You needn't shout so loud!"
And he was very proud and stiff:
He said "I'd go and wake them, if——"
I took a corkscrew from the shelf:
I went to wake them up myself.
And when I found the door was locked,
I pulled and pushed and kicked and knocked.
And when I found the door was shut,
I tried to turn the handle, but——

18.88 Little Red Riding Hood

Source: written next to a photograph of Agnes Grace Weld as Little Red Riding Hood, January 6, 1858

Into the wood—the dark, dark wood—
Forth went the happy Child;
And, in it's stillest solitude,
Talked to herself, and smiled:
And closer drew the scarlet Hood
About her ringlets wild.
And now at last she threads the maze,
And now she need not fear;
Frowning, she meets the sudden blaze
Of moonlight falling clear;
Nor trembles she, nor turns, nor stays,
Although the Wolf be near.

18.89 Is All Our Life

Source: Sylvie and Bruno (dedication)

The dream-gleam-stream rhyme which reappears here again Carroll probably borrowed from a poem he read about 1850, see the published diaries for a letter from March 15, 1886 to Mr. Watson.

If all our Life, then, but a dream
Seen faintly in the golden gleam
Athwart Time's dark resistless stream?

Bowed to the earth with bitter woe,
Or laughing at some rare-show,
We flutter idly to and fro.

Man's little Day in haste we spend,
And, from its merry noontide, send
No glance to meet the silent end.

18.90 Is it the glow of conscious pride

Source: The New Belfry (extracted)

Is it the glow of conscious pride—
Of pure ambition gratified—
That seeks to read in other eye
Something of its own ecstasy?
Or wrath, that worldlings should make fun
Of anything 'the House' has done?
Or puzzlement, that seeks in vain
The rigid mystery to explain?
Or is it shame that, knowing not
How to defend or cloak the blot—
The foulest blot on fairest face
That ever marred a noble place—
Burns with the pangs it will not own,
Pangs felt by loyal sons alone?

18.91 Tommy's Dead

Source: Mischmasch

Parody on *Tommy's Dead* by Sydney Thompson Dobell

[Written Dec. 31, 1857. There is a poem by Sydney Dobell with the same name, and something like this—but not very.]

It's the last night of the year, boys,
You may bring out the bread and beer, boys,
We've nought else to do to-night, boys,
This crust is too hard to bite, boys,
Is the donkey all right in the stable, boys?
Set two or three chairs round the table, boys,
We must have some'at to eat afore we go, boys,
Stick another coal on the fire or so, boys,
For the night's very cold,
And I'm very old,
And Tommy's dead.

Will somebody go and call t'owd wife, boys?
And just, while you're about it, fetch another knife, boys,
Get the loaf and cut me a slice, boys,
And how about the cheese, is it nice, boys?
I asked just now for a slice of bread, boys,
I say—*did you hear what I said, boys?*
There's no end of crumb, seep up the floor, boys,
Mind you don't forget to bar the door, boys,
For the night's very cold, boys,
And I'm very old, boys,
And Tommy's dead.

Is there any more beer in the jug, boys?
You may as well fill up my mug, boys,
Is there any left still? no, I drank it, boys,
I shall want an extra blanket, boys,
I'm an early body, you mun wake me in t'morning, boys,
Not that I can get up without warning, boys,
I'm not the sort that wakes all of a minute, boys,
When I'm once in my bed I likes to stop in it, boys,
For the night's very cold,
And I'm very old,
And Tommy's dead.

Come, cheer up your old daddy like men, boys,
Why, I declare it's nigh upon half-past ten, boys!
Bread's not much, I'd rather have had some tripe, boys,
D'ye think there's time for a quiet pipe, boys?
There'd be beer enough, if it hadn't been spilt, boys,
I wish I were snug under my quilt, boys,
I does so like having a talk o' nights, boys!
Ah! boys, you're young, *I've* seen a pack o' sights, boys,

When you've lived as long as I, you'll know what it is, boys,
Lads like you think it's all to be done in a whiz, boys,
Well, you may carry me upstairs, it's so late, boys,
If it wasn't for the beer, I'm not much weight, boys,
My gout's not so well, so mind how you go, boys,
Some of you'll catch it, if you tread upon my toe, boys,
Gently now, don't trip up on the mat, boys,
There, I told you so, you stupid you, take *that*, boys!
It's good for you, and keeps my hands warm, boys,
I shan't apologize—quite an unnecessary form, boys,
For the night's very cold,
And I'm very old,
And Tommy's dead.

[*Additional Note.*—The last three lines of each paragraph, and the second line of the poem, (perhaps the first as well,) are by Sydney Dobell. For the rest the Editor is responsible: he has taken a less melancholy view of the subject than the original writer did, in support of which theory he begs to record his firm conviction that “Tommy” was a cat. Recollections of its death cause a periodical gloom to come over the father's mind, accompanied always by the other two grounds of complaint which appear to have continually weighed upon him, cold and age: this gloom, we find, was only to be dispelled by one of three things, supper, the prospect of bed, and ill-temper.

There is something very instructive in the fact that the boys are never rude enough to interrupt, and probably never attend till he suggests going to bed, when they carry out his wishes with affectionate, almost unseemly, haste.]

18.92 The Lyceum

Source: verses on a torn paper for Agnes Hull to commemorate a visit to the Lyceum, March 25, 1881

Parody on *The Miller's Daughter* by Alfred Lord Tennyson

It is the lawyer's daugh. . .
And she is grown so dear, so d. . .
She costs me, in one evening,
The income of a year!
"You ca'n't have *children's* love," she cr. . .
"Unless you choose to fee 'em!"
"And what's *your* fee, Child?" I replied.
She simply said ". . .
We saw The Cup. I *hoped* she'd say,
"I'm grateful to you—very."
She murmured, as she turned aw. . .
"That lovely . . .
"Compared with *her*, the rest," she cri. . .
"Are just like two or three um-
-berellas standing side by side!
Oh, gem of th. . .
We saw Two Brothers: I confess
To *me* they seemed one man.
"Now which is which, Child? Can you . . .
She cried, "A-course I can!"
Bad puns like this I *always* dread,
And am resolved to flee 'em:
And so I left her there, & fl. . .
She *lives* at . . .

In the same letter there are also the following short verses:

How an Elderly Person took a Young Person to the Play,
but could not get her away again

Two went one day
To visit the play.
One came away:
The other would stay.

Solution to cut/missing words: daughter, dear, cried, Lyceum; away, Ellen Terry, cried, the Lyceum; guess, fled, the Lyceum

18.93 The Hunting of the Snark. An Agony in Eight Fits.

Source: The Hunting of the Snark (without most image captions and with minor differences as noted); Rhyme? and Reason? (editions differ in punctuation, here the version that makes most sense)

Fit the First. The Landing

“Just the place for a Snark!” the Bellman cried,
As he landed his crew with care;
Supporting each man on the top of the tide
By a finger entwined in his hair.

“Just the place for a Snark! I have said it twice:
That alone should encourage the crew.
Just the place for a Snark! I have said it thrice:
What I tell you three times is true.”

The crew was complete: it included a Boots—
A maker of Bonnets and Hoods—
A Barrister, brought to arrange their disputes—
And a Broker, to value their goods.

A Billiard-marker, whose skill was immense,
Might perhaps have won more than his share—
But a Banker, engaged at enormous expense,
Had the whole of their cash in his care.

There was also a Beaver, that paced on the deck,
Or would sit making lace in the bow:
And had often (the Bellman said) saved them from wreck,
Though none of the sailors knew how.

There was one who was famed for the number of things
He forgot when he entered the ship:
His umbrella, his watch, all his jewels and rings,
And the clothes he had bought for the trip.

He had forty-two boxes, all carefully packed,
With his name painted clearly on each:
But since he omitted to mention the fact,
They were all left behind on the beach.

The loss of his clothes hardly mattered, because
He had seven coats on when he came,
With three pair of boots—but the worst of it was
He had wholly forgotten his name.

He would answer to “Hi!” or to any loud cry,
Such as “Fry me!” or “Fritter my wig!”
To “What-you-may-call-um!” or “What-was-his-name!”
But especially “Thing-um-a-jig!”

“Supporting each man on the top of the tide”
(Frontispiece)

“He had wholly forgotten his name”

While, for those who preferred a more forcible word,
 He had different names from these:
 His intimate friends called him "Candle-ends,"
 And his enemies "Toasted-cheese."
 "His form is ungainly—his intellect small—"
 (So the Bellman would often remark)—
 "But his courage is perfect! And that, after all,
 Is the thing that one needs with a Snark."
 He would joke with hyænas, returning their stare
 With an impudent wag of the head:
 And he once went a walk, paw-in-paw, with a bear,
 "Just to keep up its spirits," he said.
 He came as a Baker: but owned, when too late—
 And it drove the poor Bellman half-mad—
 He could only bake Bride-cake—for which, I may state,
 No materials were to be had.
 The last of the crew needs especial remark,
 Though he looked an incredible dunce:
 He had just one idea—but, that one being "Snark,"
 The good Bellman engaged him at once.
 He came as a Butcher: but gravely declared,
 When the ship had been sailing a week,
 He could only kill Beavers. The Bellman looked scared,
 And was almost too frightened to speak:
 But at length he explained, in a tremulous tone,
 There was only one Beaver on board;
 And that was a tame one he had of his own,
 Whose death would be deeply deplored.
 The Beaver, who happened to hear the remark,
 Protested, with tears in its eyes,
 That not even the rapture of hunting the Snark
 Could atone for that dismal surprise!
 It strongly advised that the Butcher should be
 Conveyed in a separate ship:
 But the Bellman declared that would never agree
 With the plans he had made for the trip:
 Navigation was always a difficult art,
 Though with only one ship and one bell:
 And he feared he must really decline, for his part,
 Undertaking another as well.
 The Beaver's best course was, no doubt, to procure
 A second-hand dagger-proof coat—
 So the Baker advised it—and next, to insure
 Its life in some Office of note:
 This the Banker suggested, and offered for hire
 (On moderate terms), or for sale,

“The Beaver kept looking the opposite way”

Two excellent Policies, one Against Fire,
 And one Against Damage From Hail.
 Yet still, ever after that sorrowful day,
 Whenever the Butcher was by,
 The Beaver kept looking the opposite way,
 And appeared unaccountably shy.

Fit the **Second. The Bellman’s Speech.**

The Bellman himself they all praised to the skies—
 Such a carriage, such ease and such grace!
 Such solemnity, too! One could see he was wise,
 The moment one looked in his face!
 He had bought a large map representing the sea,
 Without the least vestige of land:
 And the crew were much pleased when they found it to be
 A map they could all understand.
 “What’s the good of Mercator’s North Poles and Equators,
 Tropics, Zones, and Meridian Lines?”
 So the Bellman would cry: and the crew would reply
 “They are merely conventional signs!
 “Other maps are such shapes, with their islands and capes!
 But we’ve got our brave Captain to thank”
 (So the crew would protest) “that he’s bought *us* the best—
 A perfect and absolute blank!”
 This was charming, no doubt: but they shortly found out

Ocean-Chart

That the Captain they trusted so well
 Had only one notion for crossing the ocean,
 And that was to tingle his bell.
 He was thoughtful and grave—but the orders he gave
 Were enough to bewilder a crew.
 When he cried “Steer to starboard, but keep her head larboard!”
 What on earth was the helmsman to do?
 Then the bowsprit got mixed with the rudder sometimes:
 A thing, as the Bellman remarked,
 That frequently happens in tropical climes,
 When a vessel is, so to speak, “snarked.”
 But the principal failing occurred in the sailing,
 And the Bellman, perplexed and distressed,
 Said he *had* hoped, at least, when the wind blew due East,
 That the ship would *not* travel due West!
 But the danger was past—they had landed at last,
 With their boxes, portmanteaus, and bags:
 Yet at first sight the crew were not pleased with the view,
 Which consisted of chasms and crags.
 The Bellman perceived that their spirits were low,
 And repeated in musical tone
 Some jokes he had kept for a season of woe—
 But the crew would do nothing but groan.
 He served out some grog with a liberal hand,
 And bade them sit down on the beach:
 And they could not but own that their Captain looked grand,
 As he stood and delivered his speech.
 “Friends, Romans, and countrymen, lend me your ears!”
 (They were all of them fond of quotations:
 So they drank to his health, and they gave him three cheers,
 While he served out additional rations).
 “We have sailed many months, we have sailed many weeks,
 (Four weeks to the month you may mark),
 But never as yet (*’tis* your Captain who speaks)
 Have we caught the least glimpse of a Snark!
 “We have sailed many weeks, we have sailed many days,
 (Seven days to the week I allow),
 But a Snark, on the which we might lovingly gaze,
 We have never beheld till now!
 “Come, listen, my men, while I tell you again
 The five unmistakable marks
 By which you may know, wheresoever you go,
 The warranted genuine Snarks.
 “Let us take them in order. The first is the taste,
 Which is meagre and hollow, but crisp:
 Like a coat that is rather too tight in the waist,

With a flavour of Will-o-the-wisp.
 "Its habit of getting up late you'll agree
 That it carries too far, when I say
 That it frequently breakfasts at five-o'clock tea,
 And dines on the following day.
 "The third is its slowness in taking a jest.
 Should you happen to venture on one,
 It will sigh like a thing that is deeply distressed:
 And it always looks grave at a pun.
 "The fourth is its fondness for bathing-machines,
 Which it constantly carries about,
 And believes that they add to the beauty of scenes—
 A sentiment open to doubt.
 "The fifth is ambition. It next will be right
 To describe each particular batch:
 Distinguishing those that have feathers, and bite,
 From those that have whiskers, and scratch.
 "For, although common Snarks do no manner of harm,
 Yet I feel it my duty to say
 Some are Boojums—" The Bellman broke off in alarm,
 For the Baker had fainted away.

Fit the *Æ*bird. **The Baker's Tale.**

They roused him with muffins—they roused him with ice—
 They roused him with mustard and cress—
 They roused him with jam and judicious advice—
 They set him conundrums to guess.
 When at length he sat up and was able to speak,
 His sad story he offered to tell;
 And the Bellman cried "Silence! Not even a shriek!"
 And excitedly tingled his bell.
 There was silence supreme! Not a shriek, not a scream,
 Scarcely even a howl or a groan,
 As the man they called "Ho!" told his story of woe
 In an antediluvian tone.
 "My father and mother were honest, though poor—"
 "Skip all that!" cried the Bellman in haste.
 "If it once becomes dark, there's no chance of a Snark—
 We have hardly a minute to waste!"
 "I skip forty years," said the Baker, in tears,
 "And proceed without further remark
 To the day when you took me aboard of your ship
 To help you in hunting the Snark.
 "A dear uncle of mine (after whom I was named)
 Remarked, when I bade him farewell—"
 "Oh, skip your dear uncle!" the Bellman exclaimed,

As he angrily tingled his bell.
 “He remarked to me then,” said that mildest of men,
 “If your Snark be a Snark, that is right:
 Fetch it home by all means—you may serve it with greens
 And it’s handy for striking a light.
 “You may seek it with thimbles—and seek it with care;
 You may hunt it with forks and hope;
 You may threaten its life with a railway-share;
 You may charm it with smiles and soap—”
 (“That’s exactly the method,” the Bellman bold
 In a hasty parenthesis cried,
 “That’s exactly the way I have always been told
 That the capture of Snarks should be tried!”)
 “But oh, beamish nephew, beware of the day,
 If your Snark be a Boojum! For then
 You will softly and suddenly vanish away,
 And never be met with again!”
 “It is this, it is this that oppresses my soul,
 When I think of my uncle’s last words:
 And my heart is like nothing so much as a bowl
 Brimming over with quivering curds!
 “It is this, it is this—” “We have had that before!”
 The Bellman indignantly said.
 And the Baker replied “Let me say it once more.
 It is this, it is this that I dread!
 “I engage with the Snark—every night after dark—
 In a dreamy delirious fight:
 I serve it with greens in those shadowy scenes,
 And I use it for striking a light:
 “But if ever I meet with a Boojum, that day,
 In a moment (of this I am sure),
 I shall softly and suddenly vanish away—
 And the notion I cannot endure!”

Sit the Fourth. **The Hunting.**

The Bellman looked uffish, and wrinkled his brow.
 “If only you’d spoken before!
 It’s excessively awkward to mention it now,
 With the Snark, so to speak, at the door!
 “We should all of us grieve, as you well may believe,
 If you never were met with again—
 But surely, my man, when the voyage began,
 You might have suggested it then?
 “It’s excessively awkward to mention it now—
 As I think I’ve already remarked.”
 And the man they called “Hi!” replied, with a sigh,

“But oh, beamish nephew, beware of the day”

"I informed you the day we embarked.
 "You may charge me with murder—or want of sense—
 (We are all of us weak at times):
 But the slightest approach to a false pretence
 Was never among my crimes!
 "I said it in Hebrew—I said it in Dutch—
 I said it in German and Greek:
 But I wholly forgot (and it vexes me much)
 That English is what you speak!"
 "'Tis a pitiful tale," said the Bellman, whose face
 Had grown longer at every word:
 "But, now that you've stated the whole of your case,
 More debate would be simply absurd.
 "The rest of my speech" (he explained to his men)
 "You shall hear when I've leisure to speak it.
 But the Snark is at hand, let me tell you again!
 'Tis your glorious duty to seek it!
 "To seek it with thimbles, to seek it with care;
 To pursue it with forks and hope;
 To threaten its life with a railway-share;
 To charm it with smiles and soap!
 "For the Snark's a peculiar creature, that won't
 Be caught in a commonplace way.
 Do all that you know, and try all that you don't:
 Not a chance must be wasted to-day!
 "For England expects—I forbear to proceed:
 'Tis a maxim tremendous, but trite:
 And you'd best be unpacking the things that you need
 To rig yourselves out for the fight."
 Then the Banker endorsed a blank cheque (which he crossed),
 And changed his loose silver for notes:
 The Baker with care combed his whiskers and hair,
 And shook the dust out of his coats:
 The Boots and the Broker were sharpening a spade—
 Each working the grindstone in turn:
 But the Beaver went on making lace, and displayed
 No interest in the concern:
 Though the Barrister tried to appeal to its pride,
 And vainly proceeded to cite
 A number of cases, in which making laces
 Had been proved an infringement of right.
 The maker of Bonnets ferociously planned
 A novel arrangement of bows:
 While the Billiard-marker with quivering hand
 Was chalking the tip of his nose.
 But the Butcher turned nervous, and dressed himself fine,

"To pursue it with forks and hope"

With yellow kid gloves and a ruff—
 Said he felt it exactly like going to dine,
 Which the Bellman declared was all “stuff.”
 “Introduce me, now there’s a good fellow,” he said,
 “If we happen to meet it together!”
 And the Bellman, sagaciously nodding his head,
 Said “That must depend on the weather.”
 The Beaver went simply galumphing about,
 At seeing the Butcher so shy:
 And even the Baker, though stupid and stout,
 Made an effort to wink with one eye.
 “Be a man!” ̀cried¹ the Bellman in wrath, as he heard
 The Butcher beginning to sob.
 “Should we meet with a Jubjub, that desperate bird,
 We shall need all our strength for the job!”

Fit the Fifth. The Beaver’s Lesson.

They sought it with thimbles, they sought it with care;
 They pursued it with forks and hope;
 They threatened its life with a railway-share;
 They charmed it with smiles and soap.
 Then the Butcher contrived an ingenious plan
 For making a separate sally;
 And had fixed on a spot unfrequented by man,
 A dismal and desolate valley.
 But the very same plan to the Beaver occurred:
 It had chosen the very same place:
 Yet neither betrayed, by a sign or a word,
 The disgust that appeared in his face.
 Each thought he was thinking of nothing but “Snark”
 And the glorious work of the day;
 And each tried to pretend that he did not remark
 That the other was going that way.
 But the valley grew narrow and narrower still,
 And the evening got darker and colder,
 Till (merely from nervousness, not from good will)
 They marched along shoulder to shoulder.
 Then a scream, shrill and high, rent the shuddering sky,
 And they knew that some danger was near:
 The Beaver turned pale to the tip of its tail,
 And even the Butcher felt queer.
 He thought of his childhood, left far far behind—
 That blissful and innocent state—
 The sound so exactly recalled to his mind

¹said

A pencil that squeaks on a slate!

“’Tis the voice of the Jubjub!” he suddenly cried.
 (This man, that they used to call “Dunce.”)
 “As the Bellman would tell you,” he added with pride,
 “I have uttered that sentiment once.”

“’Tis the note of the Jubjub! Keep count, I entreat;
 You will find I have told it you twice.
 ’Tis the song of the Jubjub! The proof is complete,
 If only I’ve stated it thrice.”

The Beaver had counted with scrupulous care,
 Attending to every word:
 But it fairly lost heart, and outgrabe in despair,
 When the third repetition occurred.

It felt that, in spite of all possible pains,
 It had somehow contrived to lose count,
 And the only thing now was to rack its poor brains
 By reckoning up the amount.

“Two added to one—if that could but be done,”
 It said, “with one’s fingers and thumbs!”
 Recollecting with tears how, in earlier years,
 It had taken no pains with its sums.

“The thing can be done,” said the Butcher, “I think.
 The thing must be done, I am sure.
 The thing shall be done! Bring me paper and ink,
 The best there is time to procure.”

The Beaver brought paper, portfolio, pens,
 And ink in unfailing supplies:
 While strange creepy creatures came out of their dens,
 And watched them with wondering eyes.

So engrossed was the Butcher, he heeded them not,
 As he wrote with a pen in each hand,
 And explained all the while in a popular style
 Which the Beaver could well understand.

“Taking Three as the subject to reason about—
 A convenient number to state—
 We add Seven, and Ten, and then multiply out
 By One Thousand diminished by Eight.

“The result we proceed to divide, as you see,
 By Nine-Hundred-and-Ninety-and-Two:
 Then subtract Seventeen, and the answer must be
 Exactly and perfectly true.

“The method employed I would gladly explain,
 While I have it so clear in my head,
 If I had but the time and you had but the brain—
 But much yet remains to be said.

“In one moment I’ve seen what has hitherto been

“The Beaver brought paper, portfolio, pens”

Enveloped in absolute mystery,
 And without extra charge I will give you at large
 A Lesson in Natural History.”
 In his genial way he proceeded to say
 (Forgetting all laws of propriety,
 And that giving instruction, without introduction,
 Would have caused quite a thrill in Society),
 “As to temper the Jubjub’s a desperate bird,
 Since it lives in perpetual passion:
 Its taste in costume is entirely absurd—
 It is ages ahead of the fashion:
 “But it knows any friend it has met once before:
 It never will look at a bribe:
 And in charity-meetings it stands at the door,
 And collects—though it does not subscribe.
 “Its flavour when cooked is more exquisite far
 Than mutton, or oysters, or eggs:
 (Some think it keeps best in an ivory jar,
 And some, in mahogany kegs:)
 “You boil it in sawdust: you salt it in glue:
 You condense it with locusts and tape:
 Still keeping one principal object in view—
 To preserve its symmetrical shape.”
 The Butcher would gladly have talked till next day,
 But he felt that the Lesson must end,
 And he wept with delight in attempting to say
 He considered the Beaver his friend:
 While the Beaver confessed, with affectionate looks
 More eloquent even than tears,
 It had learned in ten minutes far more than all books
 Would have taught it in seventy years.
 They returned hand-in-hand, and the Bellman, unmanned
 (For a moment) with noble emotion,
 Said “This amply repays all the wearisome days
 We have spent on the billowy ocean!”
 Such friends, as the Beaver and Butcher became,
 Have seldom if ever been known;
 In winter or summer, ’twas always the same—
 You could never meet either alone.
 And when quarrels arose—as one frequently finds
 Quarrels will, spite of every endeavour—
 The song of the Jubjub recurred to their minds,
 And cemented their friendship for ever!

Fit the Sixth. **The Barrister’s Dream.**

They sought it with thimbles, they sought it with care;

They pursued it with forks and hope;
 They threatened its life with a railway-share;
 They charmed it with smiles and soap.

But the Barrister, weary of proving in vain
 That the Beaver's lace-making was wrong,
 Fell asleep, and in dreams saw the creature quite plain
 That his fancy had dwelt on so long.

He dreamed that he stood in a shadowy Court,
 Where the Snark, with a glass in its eye,
 Dressed in gown, bands, and wig, was defending a pig
 On the charge of deserting its sty.

“‘You must know—’ said the Judge: but the Snark exclaimed ‘Fudge!’”

The Witnesses proved, without error or flaw,
 That the sty was deserted when found:
 And the Judge kept explaining the state of the law
 In a soft under-current of sound.

The indictment had never been clearly expressed,
 And it seemed that the Snark had begun,
 And had spoken three hours, before any one guessed
 What the pig was supposed to have done.

The Jury had each formed a different view
 (Long before the indictment was read),
 And they all spoke at once, so that none of them knew
 One word that the others had said.

“‘You must know—’ said the Judge: but the Snark exclaimed “‘Fudge!
 That statute is obsolete quite!
 Let me tell you, my friends, the whole question depends

On an ancient manorial right.

“In the matter of Treason the pig would appear
 To have aided, but scarcely abetted:
 While the charge of Insolvency fails, it is clear,
 If you grant the plea ‘never indebted.’

“The fact of Desertion I will not dispute:
 But its guilt, as I trust, is removed
 (So far as relates to the costs of this suit)
 By the Alibi which has been proved.

“My poor client’s fate now depends on your votes.”
 Here the speaker sat down in his place,
 And directed the Judge to refer to his notes
 And briefly to sum up the case.

But the Judge said he never had summed up before;
 So the Snark undertook it instead,
 And summed it so well that it came to far more
 Than the Witnesses ever had said!

When the verdict was called for, the Jury declined,
 As the word was so puzzling to spell;
 But they ventured to hope that the Snark wouldn’t mind
 Undertaking that duty as well.

So the Snark found the verdict, although, as it owned,
 It was spent with the toils of the day:
 When it said the word “GUILTY!” the Jury all groaned
 And some of them fainted away.

Then the Snark pronounced sentence, the Judge being quite
 Too nervous to utter a word:
 When it rose to its feet, there was silence like night,
 And the fall of a pin might be heard.

“Transportation for life” was the sentence it gave,
 “And *then* to be fined forty pound.”
 The Jury all cheered, though the Judge said he feared
 That the phrase was not legally sound.

But their wild exultation was suddenly checked
 When the jailer informed them, with tears,
 Such a sentence would have not the slightest effect,
 As the pig had been dead for some years.

The Judge left the Court, looking deeply disgusted:
 But the Snark, though a little aghast,
 As the lawyer to whom the defence was intrusted,
 Went bellowing on to the last.

Thus the Barrister dreamed, while the bellowing seemed
 To grow every moment more clear:
 Till he woke to the knell of a furious bell,
 Which the Bellman rang close at his ear.

Fit the Seventh. **The Banker's Fate.**

They sought it with thimbles, they sought it with care;
They pursued it with forks and hope;
They threatened its life with a railway-share;
They charmed it with smiles and soap.

And the Banker, inspired with a courage so new
It was matter for general remark,
Rushed madly ahead and was lost to their view
In his zeal to discover the Snark.

But while he was seeking with thimbles and care,
A Bandersnatch swiftly drew nigh
And grabbed at the Banker, who shrieked in despair,
For he knew it was useless to fly.

He offered large discount—he offered a cheque
(Drawn “to bearer”) for seven-pounds-ten:
But the Bandersnatch merely extended its neck
And grabbed at the Banker again.

Without rest or pause—while those frumious jaws
Went savagely snapping around—
He skipped and he hopped, and he floundered and flopped,
Till fainting he fell to the ground.

The Bandersnatch fled as the others appeared
Led on by that fear-stricken yell:
And the Bellman remarked “It is just as I feared!”
And solemnly tolled on his bell.

He was black in the face, and they scarcely could trace
The least likeness to what he had been:
While so great was his fright that his waistcoat turned white—
A wonderful thing to be seen!

To the horror of all who were present that day,
He uprose in full evening dress,
And with senseless grimaces endeavoured to say
What his tongue could no longer express.

Down he sank in a chair—ran his hands through his hair—
And chanted in mimsiest tones
Words whose utter inanity proved his insanity,
While he rattled a couple of bones.

“Leave him here to his fate—it is getting so late!”
The Bellman exclaimed in a fright.
“We have lost half the day. Any further delay,
And we sha’n’t catch a Snark before night!”

Fit the Eighth. **The Vanishing.**

They sought it with thimbles, they sought it with care;
They pursued it with forks and hope;

“So great was his fright that his waistcoat turned white.”

They threatened its life with a railway-share;
 They charmed it with smiles and soap.
 They shuddered to think that the chase might fail,
 And the Beaver, excited at last,
 Went bounding along on the tip of its tail,
 For the daylight was nearly past.
 “There is Thingumbob shouting!” the Bellman said.
 “He is shouting like mad, only hark!
 He is waving his hands, he is wagging his head,
 He has certainly found a Snark!”
 They gazed in delight, while the Butcher exclaimed
 “He was always a desperate wag!”
 They beheld him—their Baker—their hero unnamed—
 On the top of a neighbouring crag,
 Erect and sublime, for one moment of time.
 In the next, that wild figure they saw
 (As if stung by a spasm) plunge into a chasm,
 While they waited and listened in awe.
 “It’s a Snark!” was the sound that first came to their ears,
 And seemed almost too good to be true.
 Then followed a torrent of laughter and cheers:
 Then the ominous words “It’s a Boo—”
 Then, silence. Some fancied they heard in the air
 A weary and wandering sigh
 That sounded like “—jum!” but the others declare
 It was only a breeze that went by.

“Then, silence”

They hunted till darkness came on, but they found
Not a button, or feather, or mark,
By which they could tell that they stood on the ground
Where the Baker had met with the Snark.
In the midst of the word he was trying to say,
In the midst of his laughter and glee,
He had softly and suddenly vanished away—
For the Snark *was* a Boojum, you see.

18.94 King-fisher Song

Source: Sylvie and Bruno Concluded (extracted)

King Fisher courted Lady Bird—
Sing Beans, sing Bones, sing Butterflies!
“Find me my match,” he said,
“With such a noble head—
With such a beard, as white as curd—
With such expressive eyes!”
“Yet pins have heads,” said Lady Bird—
Sing Prunes, sing Prawns, sing Primrose-Hill!
“And, where you stick them in,
They stay, and thus a pin
Is very much to be preferred
To one that’s never still!”
“Oysters have beards,” said Lady Bird—
Sing Flies, sing Frogs, sing Fiddle-strings!
“I love them, for I know
They never chatter so:
They would not say one single word—
Not if you crowned them Kings!”
“Needles have eyes,” said Lady Bird—
Sing Cats, sing Corks, sing Cowslip-tea!
“And they are sharp—just what
Your Majesty is *not*:
So get you gone—’tis too absurd
To come a-courting *me!*”

18.95 Prologue (1871)

Source: written for an amateur performance at the house of Dr. Edwin Hatch,
Nov. 2, 1871

Curtain rises and discovers the Speaker, who comes forward, thinking aloud,

“Ladies and Gentlemen” seems stiff and cold.
There’s something personal in “Young and Old”;
I’ll try “Dear Friends” (*addresses audience*) Oh! let me call you so.
Dear friends, look kindly on our little show.
Contrast us not with giants in the Art,
Nor say “You should see Sothern in that part”;
Nor yet, unkindest cut of all, in fact,
Condemn the actors, while you praise the Act.
Having by coming proved you find a charm in it,
Don’t go away, and hint there may be harm in it.

Quoted from *Julius Caesar* by William Shakespeare

* * * * *

Miss Crabb: My dear Miss Verjuice, can it really be?
You’re just in time, love, for a cup of tea;
And so, you went to see those people play.

Miss Verjuice: Well! yes, Miss Crabb, and I may truly say
You showed your wisdom when you stayed *away*.

Miss C.: Doubtless! Theatricals in *our* quiet town!
I’ve always said, “The law should put them down,”
They mean no harm, tho’ I begin to doubt it—
But now sit down and tell me all about it.

Miss V.: Well then, Miss Crabb, I won’t deceive you, dear;
I heard some things I—didn’t like to hear:

Miss C.: But don’t omit them now.

Miss V.: Well! No! I’ll try
To tell you *all* the painful history.

(*They whisper alternately behind a small fan.*)

Miss V.: And then, my dear, Miss Asterisk and he
Pretended they were lovers!!

Miss C.: Gracious me!!

(*More whispering behind fan.*)

* * * * *

Speaker: What! *Acting* love!! And has that ne’er been seen
Save with a row of footlights placed between?
My gentle censors, let me roundly ask,

Do none but actors ever wear a mask?
Or have we reached at last that golden age
That finds deception only on the Stage?
Come, let's confess all round before we budge,
When all are guilty, none should play the Judge.
We're actors all, a motley company,
Some on the Stage, and others—on the sly—
And guiltiest he who paints so well his phiz
His brother actors scarce know what he is.
A truce to moralizing; we invite
The goodly company we see to-night
To have the little banquet we have got,
Well dressed, we hope, and served up *hot & hot*.
"Loan of a Lover" is the leading dish,
Concluding with a dainty course of fish;
"Whitebait at Greenwich" in the best condition
(By Mr. Gladstone's very kind permission).
Before the courses will be handed round
An *Entrée* made of Children, nicely browned.

Bell rings.

But hark! The bell to summon me away;
They're anxious to begin their little Play.
One word before I go—We'll do our best,
And crave your kind indulgence for the rest;
Own that at least we've striven to succeed,
And take the good intention for the deed.

Nov. 1871.

18.96 Echoes

Source: Rhyme? and Reason?

Lady Clara Vere de Vere
Was eight years old, she said:
Every ringlet, lightly shaken, ran itself in golden thread.
She took her little porringer:
Of me she shall not win renown:
For the baseness of its nature shall have strength to drag her down.
“Sisters and brothers, little Maid?
There stands the Inspector at thy door:
Like a dog, he hunts for boys who know not two and two are four.”
“Kind words are more than coronets,”
She said, and wondering looked at me:
“It is the dead unhappy night, and I must hurry home to tea.”

18.97 Christmas-Greetings

Source: Phantasmagoria (as “Christmas Greetings” and with minor differences as noted); Alice’s Adventures in Wonderland etc.; also separately printed 1884 (again as “Christmas Greetings”, with differences in punctuation and signature “Lewis Carroll”)

[From a Fairy to a Child]

Lady dear, if Fairies may
For a moment lay aside
Cunning tricks and elfish play,
’Tis at happy Christmas-tide.
We have heard the children say—
Gentle children, whom we love—
Long ago, on Christmas Day,
Came a message from above.
Still, as ¹Christmas-tide comes round,
They remember it again—
Echo still the joyful sound
“Peace on earth, good-will to men!”
Yet the hearts must childlike be
Where such heavenly guests abide:
Unto children, in their glee,
All the year is Christmas-tide!
²Thus, forgetting tricks and play
For a moment, Lady dear,
We would wish you, if we may,
Merry Christmas, glad New Year!

³Christmas, 1867.

18.98 Let craft, ambition, spite

Source: Sylvie and Bruno (extracted)

Let craft, ambition, spite,
Be quenched in Reason's night,
Till weakness turn to might,
Till what is dark be light,
Till what is wrong be right!

18.99 Little Birds

Source: Sylvie and Bruno Concluded (extracted, connected)

Little Birds are dining
Warily and well,
Hid in mossy cell:
Hid, I say, by waiters
Gorgeous in their gaiters—
I've a Tale to tell.¹

Little Birds are feeding
Justices with jam,
Rich in frizzled ham:
Rich, I say, in oysters
Haunting shady cloisters—
That is what I am.

Little Birds are teaching
Tigresses to smile,
Innocent of guile:
Smile, I say, not smirkle—
Mouth a semicircle,
That's the proper style.

Little Birds are sleeping
All among the pins,
Where the loser wins:
Where, I say, he sneezes
When and how he pleases—
So the Tale begins.

Little Birds are writing
Interesting books,
To be read by cooks:
Read, I say, not roasted—
Letterpress, when toasted,
Loses its good looks.

Little Birds are playing
Bagpipes on the shore,
Where the tourists snore:
"Thanks!" they cry. "'Tis thrilling!
Take, oh take this shilling!

¹Additional stanza (here from *Diaries*, p. 453f/*Lewis Carroll & His Illustrators*) that was removed to fit with the illustrations:

Little Birds are seeking
Hecatombs of haws,
Dressed in snowy gauze:
Dressed, I say, in fringes
Half-alive with hinges—
Thus they break the laws.

Let us have no more!"

Little Birds are bathing
Crocodiles in cream,
Like a happy dream:
Like, but not so lasting—
Crocodiles, when fasting,
Are not all they seem!

Little Birds are choking
Baronets with bun,
Taught to fire a gun:
Taught, I say, to splinter
Salmon in the winter—
Merely for the fun.

Little Birds are hiding
Crimes in carpet-bags,
Blessed by happy stags:
Blessed, I say, though beaten—
Since our friends are eaten
When the memory flags.

Little Birds are tasting
Gratitude and gold,
Pale with sudden cold
Pale, I say, and wrinkled—
When the bells have tinkled
And the Tale is told.

18.100 Lines

Source: Phantasmagoria; original (dedication in a book (*Holiday House* by Catherine Sinclair) for the Liddell sisters, Christmas 1861) with minor differences as noted

[Addressed to three little girls, with a copy of 'Holiday House.']*¹

Little maidens, when you look
On this little story-book,
Reading with attentive eye
Its enticing history;
Never think that hours of play
Are your only *holiday*²,
And that, in a *time*³ of joy,
Lessons serve but to annoy.
If in any HOUSE you find
Children of a gentle mind,
Each the others *helping*⁴ ever,
Each the others vexing never,
Daily *task*⁵ and pastime daily
In their order taking gaily—
Then be very sure that they
Have a *life* of HOLIDAY.

18.101 Lorenzo dwelt at Heighington

Source: The Legend of "Scotland" (extracted)

Lorenzo dwelt at Heighington,
 (Hys cote was made of Dimity,)
Least-ways yf not exactly there,
 Yet yn yt's close proximity.
Hee called on mee—hee stayed to tee—
 Yet not a word he ut-tered,
Untyl I sayd, "D'ye lyke your bread
Dry?" and hee answered "But-tered."
 Noodle dumb
 Has a noodle-head,
I hate such noodles, *I* do.

18.102 Love-lighted eyes

Source: inscribed into a copy of *The Hunting of the Snark* for Miss Laura Plomer, 1876

Love-lighted eyes, that will not start
At frown of rage or malice!
Uplifted brow, undaunted heart
Ready to dine on raspberry-tart
Along with fairy Alice!

In scenes as wonderful as if
She'd flitted in a magic skiff
Across the sea to Calais:
Be sure this night, in Fancy's feast,
Even till Morning gilds the east,
Laura will dream of Alice!

Perchance, as long years onward haste,
Laura will weary of the taste
Of Life's embittered chalice:
May she, in such a woeful hour,
Endued with Memory's mystic power,
Recall the dreams of Alice!

June 17, 1876.

Acrostic: Laura Isabel Plomer

18.103 A Russian's Day in England

Source: written for Lady Gwendolen Cecil, November 13, 1874; from a draft version (only final variant of the corrections given here)

Lunch at one (that's "adîn")
As there's lots to be seen.
At two (which is "dvâ")
We set out on the car.
Three o'clock (that is "trî")
Found me tired as could be
And by four (that's "chetîr")
I felt terribly dreary:
So when five struck (that's "pyât")
I was quite out of heart.
At six (that is "shaist")
I sighed "Oh for the *far* East!"
At seven (called "sêm")
Home to dinner we came.
At eight (that is "vosem")
Called the children, to dose 'em.
Supped at nine (that is "dyasat")
Which I made a long face at.

Finis.

Now, if it's any
Advantage to Lady Gwendolen Cecil
To remember how Russ
Is accented by *us*,
Let her read, at odd times,
These Russ-Anglican rhymes.

Nov. 13/74 CLD

18.104 Maiden, though thy heart may quail

Source: inscribed into a copy of *The Hunting of the Snark* for Miss Marion Terry, 1876

Maiden, though thy heart may quail
And thy quivering lip grow pale,
Read the Bellman's tragic tale!

Is it life of which it tells?
Of a pulse that sinks and swells
Never lacking chime of bells?

Bells of sorrow, bells of cheer,
Easter, Christmas, glad New Year,
Still they sound, afar, anear.

So may Life's sweet bells for thee,
In the summers yet to be,
Evermore make melody!

Aug. 15, 1876.

Acrostic: Marion Bessie

18.105 Maidens, if a maid you meet

Source: inscribed into a book for Miss Margaret Dymes, 1877

Maidens, if a maid you meet
Always free from pout and pet,
Ready smile and temper sweet,
Greet my little Margaret.
And if loved by all she be
Rightly, not a pampered pet,
Easily you then may see
'Tis my little Margaret.

Acrostic: Margaret

18.106 Maidens! If you love the tale

Source: inscribed into a copy of *The Hunting of the Snark* for the three Misses Drury, 1876

“Maidens! If you love the tale,
If you love the Snark,
Need I urge you, spread the sail,
Now, while freshly blows the gale,
In your ocean-barque!

“English Maidens love renown,
Enterprise, and fuss!”
Laughingly those Maidens frown;
Laughingly, with eyes cast down;
And they answer thus:

“English Maidens fear to roam.
Much we dread the dark;
Much we dread what ills might come,
If we left our English home,
Even for a Snark!”

Lewis Carroll.
Ap. 6. 1876.

Acrostic: Minnie, Ella, Emmie

18.107 Punctuality

Source: Useful and Instructive Poetry

Man naturally loves delay,
And to procrastinate;
Business put off from day to day
Is always done too late.

Let every hour be in it's place
Firm fixed, nor loosely shift,
And well enjoy the vacant space,
As though a birthday gift.

And when the hour arrives, be *there*,
Where'er that "there" may be;
Uncleanly hands or ruffled hair
Let no one ever see.

If dinner at "half past" be placed,
At "half past" then be dressed.
If at a "quarter past" make haste
To be down with the rest.

Better to be before your time,
Than e'er to be behind;

To ope the door while strikes the chime,
 That shews a punctual mind.

Moral:

“Let punctuality and care
 Seize every flitting hour,
So shalt thou cull a floweret fair,
 E’en from a fading flower.”

18.108 Matilda Jane

Source: Sylvie and Bruno Concluded (extracted)

The text of the original manuscript with minor differences (“I fear you’re blind”, “*all* my conversation”, “You never say a word again”, “For you are dumb”) can be found in *Letters*.

Matilda Jane, you never look
At any toy or picture-book:
I show you pretty things in vain—
You must be blind, Matilda Jane!

I ask you riddles, tell you tales,
But *all* our conversation fails:
You *never* answer me again—
I fear you’re dumb, Matilda Jane!

Matilda, darling, when I call,
You never seem to hear at all:
I shout with all my might and main—
But you’re *so* deaf, Matilda Jane!

Matilda Jane, you needn’t mind;
For, though you’re deaf, and dumb, and blind,
There’s *some one* loves you, it is plain—
And that is *me*, Matilda Jane!

18.109 Horrors

Source: Rectory Magazine

Methought I walked a dismal place
Dim horrors all around
The air was thick with many a face,
And black as night the ground.
I saw a monster come with speed,
It's face of grimmiest green,
On human beings used to feed,
Most dreadful to be seen.
I could not speak, I could not fly,
I fell down in that place,
I saw the monster's horrid eye,
Come leering in my face!
Amidst my scarcely-stifled groans
Amidst my moanings deep,
I heard a voice, "Wake! M^r Jones,
You're screaming in your sleep!"

18.110 The Deserted Parks

Source: The Deserted Parks (with minor differences as noted); Notes by an Oxford Chiel

Parody on *The Deserted Village* by Oliver Goldsmith

The proposal to convert the Parks into Cricket-grounds

Notice from the Vice-Chancellor.

“A form of Decree to the following effect will be proposed:—”¹

1. That the Curators of the Parks be authorised to receive applications from Members of the University for Cricket-grounds in the Parks, and that public notice be issued to that effect, a time being fixed within which applications are to be sent in.

2. That at the expiration of such time the Curators be authorised to make Cricket-grounds, and allot them to Cricket-clubs or Colleges from which applications have been received, according to priority of application.

F. K. Leighton,
Vice-Chancellor.
April 29, 1867.

‘Solitudinem faciunt: Parcum appellat.’

Quoted from *Agricola*
by Tacitus (modified)

Museum! loveliest building of the plain
Where Cherwell winds towards the distant main;
How often have I loitered o’er thy green,
Where humble happiness endeared the scene!
How often have I paused on every charm,
The rustic couple walking arm in arm—
The groups² of trees, with seats beneath the shade
For prattling babes and whisp’ring lovers made—
The never-failing brawl, the busy mill
Where tiny urchins vied in fistic skill—
(Two phrases only have that dusky race
Caught from the learned influence of the place;
Phrases in their simplicity sublime,
‘Scramble a copper!’ ‘Please, Sir, what’s the time?’)
These round thy walks their cheerful influence shed;
These were thy charms—but all these charms are fled.
Amidst thy bowers the tyrant’s hand is seen,
And rude pavilions sadden all thy green;
One selfish pastime grasps the whole domain,
And half a faction swallows up the plain;
Adown thy glades, all sacrificed to cricket,
The hollow-sounding bat now guards the wicket;
Sunk are thy mounds in shapeless level all,

¹The whole introduction is missing in the original publication.

²group

Lest aught impede the swiftly rolling ball;
And trembling, shrinking from the fatal blow,
Far, far away thy hapless children go.

Ill fares the place, to luxury a prey.
Where wealth accumulates, and minds decay;
Athletic sports may flourish or may fade.
Fashion may make them, even as it has made;
But the broad Parks, the city's joy and pride,
When once destroyed can never be supplied!

Ye friends to truth, ye statesmen, who survey
The rich man's joys increase, the poor's decay,
'Tis yours to judge, how wide the limits stand
Between a splendid and a happy land.
Proud swells go by with laugh of hollow joy.
And shouting Folly hails them with 'Ahoy!'
Funds even beyond the miser's wish abound,
And rich men flock from all the world around.
Yet count our gains. This wealth is but a name,
That leaves our useful products still the same.
Not so the loss. The man of wealth and pride
Takes up a space that many poor supplied;
Space for the game, and all its instruments,
Space for pavilions and for scorers' tents;
The ball, that raps his shins in padding cased,
Has worn the verdure to an arid waste;
His Park, where these exclusive sports are seen,
Indignant spurns the rustic from the green;
While through the plain, consigned to silence all,
In barren splendour flits the russet ball.

In peaceful converse with his brother Don,
Here oft the calm Professor wandered on;
Strange words he used—men drank with wondering ears
The languages called 'dead,' the tongues of other years.
(Enough of Heber! Let me once again
Attune my verse to Goldsmith's liquid strain.)
A man he was to undergraduates dear.
And passing rich with forty pounds a year.
And so, I ween, he would have been till now,
Had not his friends ('twere long to tell you how)
Prevailed on him, Jack-Horner-like, to try
Some method to evaluate his pie,
And win from those dark depths, with skilful thumb,
Five times a hundredweight of luscious plum—
Yet for no thirst of wealth, no love of praise,
In learned labour he consumed his days!

O luxury! thou cursed by Heaven's decree.
How ill exchanged are things like these for thee!
How do thy potions, with insidious joy,
Diffuse their pleasures only to destroy;
Iced cobbler, Badminton, and shandy-gaff,

Rouse the loud jest and idiotic laugh;
 Inspired by them, to tipsy greatness grown.
 Men boast a florid vigour not their own;
 At every draught more wild and wild they grow;
 While pitying friends observe 'I told you so!'
 Till, summoned to their post, at the first ball,
 A feeble under-hand, their wickets fall.
 Even now the devastation is begun.
 And half the business of destruction done;
 Even now, methinks while pondering here in pity,
 I see the rural Virtues leave the city.
 Contented Toil, and calm scholastic Care,
 And frugal Moderation, all are there;
 Resolute Industry that scorns the lure
 Of careless mirth—that dwells apart secure—
 To science gives her days, her midnight oil,
 Cheered by the sympathy of others' toil—
 Courtly Refinement, and that Taste in dress
 That brooks no meanness, yet avoids excess—
 All these I see, with slow reluctant pace
 Desert the long-beloved and honoured place!
 While yet 'tis time, Oxonia, rise and fling
 The spoiler from thee: grant no parleying!
 Teach him that eloquence, against the wrong,
 Though very poor, may still be very strong;
 That party-interests we must forego,
 When hostile to 'pro bono publico';
 That faction's empire hastens to its end,
 When once mankind to common sense attend;
 While independent votes may win the day
 Even against the potent spell of 'Play!'

May, 1867.

18.111 My dear Christie

Source: sent to Sophia Christina “Christie” Taylor, October 1869?

My dear Christie,
I greatly fear
I'm wanted here,
Which makes it clear
I can't appear
At your “pour rire”—
Would I were freer!
So, with a tear
(At which don't sneer),
I am, my dear,
Your most sincere
C. L. Dodgson

18.112 My First has no beard

Source: written for Alexandra Kitchin, perhaps around 1880

My First has no beard—but its whiskers abound:
My Next has a beard—but no eyes:
My whole has two eyes—and a nourishing sound
That reminds one of puddings & pies.

Lewis Carroll (written for Xie)

Solution: A kit, chin: A. Kitchin

18.113 My First heads all atrocity heartrending

Source: sent to Alice Maud Kitchin, February 24, 1880

My First heads all atrocity heartrending:
My Next to finish it is ever tending:
My Third in Town its merry life is spending:
My Fourth is the beginning of an ending.
My Whole is one of those perplexing misses,
Where looks of Youth encourage friendly kisses,
And yet where Age is sober fact, & this is
Destruction to such transitory blisses!

Solution: AT(rocitY), (atrocitY), (t)OW(n), EN(ding): Atty Owen

18.114 My First is a berry

Source: letter to Olive, Ruth, and Violet Butler, December 29, 1892

My First is a berry:
My Second is sorrow:
My Third from the cherry
Its sweetness doth borrow:
My Whole is too merry
To care for the morrow!

There is another verse-riddle in this letter:

VIOLET
VIOLET
VIOLET
VIOLET
VIOLET

To find the eldest of the pets.
Go search among the violets!

Solution to first verse-riddle: olive, ruth, violet: Olive, Ruth, Violet

18.115 Four Riddles. No. IV

Source: cyclostyled 1878 (as “A Charade”, with minor differences as noted and illustrations); Rhyme? and Reason?

⌈NB Five Pounds will be given to any one who succeeds in writing an original poetical Charade, introducing the line “My First is followed by a bird,” but making no use of the answer to this Charade.

*Ap. 8, 1878 (signed) Lewis Carroll*¹

My First is singular at best:
More plural is my Second:
My Third is far the pluralest—
So plural-plural, I protest
It scarcely can be reckoned!

My First is followed by a bird:
My Second by believers
In magic art: my simple Third
Follows, too often, hopes absurd
And plausible deceivers.

My First to get at wisdom tries—
A failure melancholy!
My Second men ⌈revered² as wise:
My Third from heights of wisdom flies
To depths of frantic folly.

My First is ageing day by day:
My Second's age is ended:
My Third enjoys an age, they say,
That never seems to fade away,
Through centuries extended.

My Whole? I need a poet's pen
To paint her myriad phases:
The monarch, and the slave, of men—
A mountain-summit, and a den
Of dark and deadly mazes—
A flashing light—a fleeting shade—
Beginning, end, and middle
Of all that human art hath made
Or wit devised! Go, seek *her* aid,
If you would ⌈read³ my riddle!

¹only in original

²revere

³guess

Solution: I-Magi-Nation, Imagination [“I” is followed by “J”, and “jay” is a bird]

18.116 A Riddle

Source: sent to Miss Gaynor Simpson, 1880

My first lends his aid when I plunge into trade:
My second in jollifications:
My whole, laid on thinnish, imparts a neat finish
To pictorial representations.

Solution: Co, pal: copal. Alternative solutions given by Carroll: gain, Or: Gaynor;
sea, weed: seaweed

18.117 My First we call her when her belt is on

Source: written for Gertrude Chataway, perhaps about 1875

My First we call her when her belt is on
My Next she is to every Oxford don:
O happy Sandown when my Whole is gone!

Solution: girt, rude: Gertrude

18.118 My First's a drink resembling wine

Source: written for Alexandra Kitchin, February 23, 1880

My First's a drink resembling wine:
My Second closely follows nine:
My Third doth sentences combine:
My Fourth is hung upon "the Line":
My Whole's a victim I design
To photograph when days are fine.

Feb. 23. 1880

Solution: ale, X, and, R.A.: Alexandra

18.119 Those Horrid Hurdy-Gurdies!

Source: The College Rhymes, November 1861

Parody on *My mother bids me bind my hair* by Anne Hunter, *My lodging is on the cold, cold ground* (*The Rivals*) by William Davenant, *Ever of thee* by George Linley

A Monody, by A Victim

“My mother bids me bind my hair,”
And not go about such a figure;
It’s a bother, of course, but what do I care?
I shall do as I please when I’m bigger.
“My lodging is on the cold, cold ground,”
As the first-floor and attics were taken.
I tried the garret but once, and found
That my wish for a change was mistaken.
“Ever of thee!” yes, “Ever of thee!”
They chatter more and more,
Till I groan aloud, “Oh! let me be!
“I have heard it all before!”
“Please remember the organ, sir;”
What? hasn’t he left me yet?
I promise, good man; for its tedious burr
I never can forget.

18.120 My Sukie! He hath bought, yea, Muggle's self

Source: Wilhelm von Schmitz (extracted, with differences in printed version as noted)

My Sukie! he hath bought, yea, Muggle's self,
Convinced at last of deeds unjust and foul,
The licence of a vacant public-house,
Which, with it's chattels, site, and tenement,¹
He hands us over,—we are licensed here,
Even in this document, to sell to all
Snuff, pepper, vinegar, to sell to all
Ale, porter, spirits, but—observe you well—
“*Not* to be drunk upon the premises!”
Oh, Sukie! heed it well! in other places,
Even as thou listest, be intoxicate:
Drink without limit whiles thou art abroad,
But never, never, in thy husband's house!

¹This line and all the following are in the short version replaced by:

We are licensed here to sell to all,
Spirits, porter, snuff, and ale!

18.121 Near Albury, so runs my lay

Source: written for Alice Pares, September 4, 1871 and inscribed into a copy of *Through the Looking-Glass*, Christmas 1871

Near Albury, so runs my lay,
All in a meadow green,
One desperately sultry day,
A weeping MAID was seen.
“Oh for a parasol!” she cried,
“Or a balloon, to go
And dwell on some far MOUNTAIN-side,
Whose peak is crowned with snow!
“I roam this FIELD with weary tread,
Heavy as roly-poly—
This field where (as some Poet said)
‘The lowing herd winds slowly.’”
Just then a BOY runs up to beg—
An orphan (so he pleads)
Who, deaf and dumb, with but one leg,
Two aged parents feeds.
“Little have I to give or lend,”
Quoth she: “my wealth is small—
ONE SHILLING’S WORTH OF HALFPENCE, friend.
Please do not take it all!”
The orphan snatched the purse and fled,
Not at the pace of snails,
But like a TRAIN that goes ahead
And skims along the rails!

Solution: Alice Pares; alp, lea, imposter, change, express

18.122 “No mind!” the little maiden cried

Source: sent to Janet Merriman, December 17, 1870

“No mind!” the little maiden cried
 In half-indignant tone,
“To think that I should be denied
 A mind to call my own!”
And echo heard, and softly sighed (or seemed to sigh) “My own!”
“No mind!” the little maiden said,
 “You’d think it, I suppose!
And yet you know I’ve got a head
 With chin, cheek, mouth, eye, nose—”
And echo heard, and sweetly said (or seemed to say) “I knows!”
“You have no mind to be unkind,”
 Said echo in her ear:
“No mind to bring a living thing
 To suffering or fear.
For all that’s bad, or mean, or sad, you have no mind, my dear.”
Then if the friend whom you deride,
 To all your merits blind,
Should say that, though he’s tried and tried,
 Your mind he *cannot* find . . .
’Tis but a jest for Christmas-tide, so, Janet, *never mind!*

18.123 No, no! I cannot write a line

Source: sent to Margaret Cunnyngame, April 10, 1871

No, no! I cannot write a line,
I cannot write a word:
The thoughts I think appear in ink
So shockingly absurd.

To wander in an empty cave
Is fruitless work, 'tis said:
What must it be for one like me
To *wander in his head*?

You say that I'm "to write a verse"—
O Maggie, put it quite
The other way, and kindly say
That I'm "averse to write"!

C. L. D.

18.124 Now what's the most appropriate thing

Source: The Guildford Gazette Extraordinary (extracted, connected; authorship not entirely certain)

Parody on *Hoop de dooden doo* by A. Nish

Now what's the most appropriate thing
To do whilst waiting at the wing?
Of course you guess the answer?—Synge.
And I hope the tune will do!

I sing the joys of married life,
Which Pillicoddy finds so rife.
In fact, good folk, you'll find a wife
is—Hoop de dooden doo!

Her bills! Ten pounds for boots, I see:
And six for gloves, and—oh dear me!
Here's just one hundred ninety-three
for—Hoop de dooden doos!

Commissions. 'Twenty yards of stuff
To pattern—try and match this cuff—
And—just bring home—another Muff!
That's Hoop de dooden doo!

The little kids! It seemed a treat
At first to see them frisk and bleat—
But now I find that they—*can—eat—*
like—Hoop de dooden doo!

So, gin a body meet a body
And make a match, some day you'll modi-
fy your views like Pillicoddy,
Hoop de dooden doo!

Sir, are you married? Yes, you sigh!
Well, 'Happy man!' I make reply.
What, single? 'Lucky dog!' say I,
Hoop de dooden doo!

Quoted from *Comin thro' the Rye* by Robert Burns

18.125 O come to me at two today

Source: letter to August Harcourt, March 5, 1872

O come to me at two today,
Harcourt, come to me!
And show me how my dark room may
Illuminated be.
Though gondolas may lightly glide,
For me, unless you come,
No friend remains but cyanide
Of pale potassium!
Though maidens sing sweet barcaroles
(Whatever they may be)
To captivate Lee's-Readers' souls,
Yet, Harcourt, come to me!
Yes, come to me at two today,
Or else at two tomorrow,
Nor leave thy friend to pine away
In photographic sorrow!

18.126 The Ligniad, in two Books

Source: written 1853 for George Girdlestone Woodhouse

Book I

Of man in stature small yet deeds sublime,
Who, even from his tender toothless years,
Boldly essayed to swallow and digest
Whole tomes of massive learning, ostrich-like,
Sing, classic Muse! and speed my daring quill,
Whiles that in language all too poor and weak
For such high themes, I tremblingly recount
To listening world's an hero's history.

Nursed in a cradle framed of Doric reeds,
In a fly-leaf of Scapula enwrapped,
Fed on black-broth (oh classic privilege!)
Seasoned with Attic salt, the infant throve.
Small taste had he for toys of infancy;
The coral and the bells he put aside;
But in his cradle would soliloquise,
And hold high commune with his inner man
In Greek Iambics, aptly modified.
A smile sardonic wore he in his joy;
And in his sorrow shed no mawkish tear;
ὄμοι πεπληγμαι was his only cry,
And with much "smiting of the breast," he wrestled,
And would have rent his hair, but that he had none.

A merry boy the infant hath become;
He leaps and dances in the light of life,
With his shrill laughter rings the ancient house,
The stairs reecho to his tread, as light
As when beneath the solemn oaks at eve
The tricky fairies in their revelry
Wheel in wild dance, nor mark the dewy grass.
Yet even now upon that chiselled brow,
Lately so bright and fair, a Shadow dwells;
It is the Ghost of Latin yet unlearnt,
And dark forebodings of the Greek-to-come!
What can his grief be? he has all he loves,
A Scapula, an "Ainsworth's Dictionary,"
And "all the Greek, and all the Latin authors—"
Then wherefore, moody boy, that crystal tear?
"It is the thought," methinks I hear him moan,
Clasping with quivering hands his aching brow,
"That certain Plays Euripides hath written
Are lost, are lost, and *I* shall never see them!"

"Homer may come, and Homer may go,

Quoted from
Agamemnon by
Aeschylus

“And be shifted, like lumber, from shelf to shelf,
“But I will read no Greek, no Greek,
“Until the Lost Dramas I’ve found for myself!”
Thus, all unconscious, rhymed his agony,
Adapting to the anguish of the hour
A fragment from our Poet Laureate.

Book II

Sing ye, who list, the deeds of ancient might,
In tournament, or deadlier battle-fray:
Sing ye the havoc and the din of war,
A nobler and a gentler theme be mine!
Through twice nine years eventless passed his life,
Save that each day some large addition brought
To that vast mass of learning stored within.
But now bright Fancy thrilled his raptured mind,
And poised her wings for flight, yet ere she rose,
With ponderous Sense he loaded her to Earth;
And the full flood of Poesy within
He primly tortured into wooden verse:

“Glory of the ancient time,
Classic fount of other days!
How shall I, in modern rhyme
Fitly sing thy praise?
It chanced, the other day,
A tattered beggar asked an alms of me:
“Bestow a trifle, sir, in charity!”

I turned and said
“Good man,
I have but sixpence in my purse
Yet rather than
In hunger you should pine,
And so your misery grow worse,
It shall be thine,
If you’ll be only good enough to say
That, in
Latin.”

Was this encouragement to classic lore?
Say rather, more!
So may my course for ever smoothly run,
And onward swell
In that smooth channel where it hath begun:
Still climbing, climbing up the classic heights
Where Fame doth dwell
And still
I will
From month to month, from week to week,
Devote my drowsy days and wakeful nights

To Greek.”

Such were the fancies of his lighter mood—
His lighter mood, which very seldom came:
But now my Muse, approaching higher themes,
Shrinks from the task in trembling, for the field,
Green & smooth-shaven, spreads before her sight;
The wickets pitched, the players ranged around;
And he, the hero, in his glory there;
A sight to dream of, not to write about!
Then fare thee well, greatest of little men,
In Greek, in Latin, in the cricket-field:
Great as a bowler, greater as a bat,
But as a “short slip” greater yet than that!

CLD. May 23. 1853

18.127 To "Hallie"

Source: sent to Clara Halyburton Cunnyngame, January 1868

Oh Caledonian Maiden!
Oh Hallie shy and still!
When'ere I hear sweet music,
Of you my thoughts will fill.
I shall think of those "half hours"
In Ripon spent with you,
I shall dream of great Beethoven
And of Mendelssohn so true.
If "sleepless nights" assail me,
And I toss about in vain,
The memory of Heller
Will make me rest again.
A chord of "Caller Herrin;"
A note of "Home sweet Home,"
A bar of Scotland's "Blue Bells,"
Will make my spirit roam
To a Drawing-room in the Crescent
Where those sweet sounds I heard,
And where I fain would follow
If I were *but* a bird.
Then Hallie! dear Childe Hallie!
Be to your "talent" *true*,
And sometimes when you're playing
Think *I* am watching you.—
Think how I *loved* your Music,
Not for itself *alone*,
But for the *hands* that played it
The *mind* that felt its tone.
And now farewell "Childe Hallie!"
Though *I* am growing old,
Fond mem'ry still will charm me,
To *you* I'll ne'er grow cold.

18.128 Ode to Damon

Source: Mischmasch (with different punctuation); The College Rhymes, November 1861

(From Chloë, who Understands His Meaning.)

Oh, do not forget the day when we met
At the fruiterer's shop in the city:
When you *said* I was plain and *excessively* vain,
But I knew that you *meant* I was pretty.
Recollect, too, the hour when I purchased the flour
(For the dumplings, you know) and the suet;
Whilst the apples I told my dear Damon to hold,
(Just to see if you knew how to do it.)
Then recall to your mind how you left *me* behind,
And went off in a 'bus with the pippins;
When you *said* you'd forgot, but I knew you had *not*;
(It was merely to save the odd threepence!)
Don't forget your delight in the dumplings that night,
Though you *said* they were tasteless and doughy:
But you winked as you spoke, and I saw that the joke
(*If it was one*) was meant for your Chloë!
Then remember the day when Joe offered to pay
For us all at the Great Exhibition;
You proposed a short cut, and we found the thing shut,
(We were two hours too late for admission.)
Your "short cut," dear, we found took us *seven miles round*,
(And Joe said *exactly* what we did:)
Well, *I* helped you out then—it was just like you men—
Not an atom of sense when it's needed!
You said "What's to be done?" and *I* thought you in fun,
(Never *dreaming* you were such a ninny,)
"*Home* directly!" said I, and *you* paid for the fly,
(And I *think* that you gave him a guinea.)
Well, *that* notion, you said, had not entered your head:
You proposed, "The best thing, as we're come, is
(Since it opens again in the morning at ten)
To wait"—*Oh, you prince of all dummies!*
And when Joe asked you "Why, if a man were to die,
Just as you ran a sword through his middle,
You'd be hung for the crime?" and you said "Give me time!"
And brought to your Chloë the riddle—
Why, remember, you dunce, how I solved it at once—
(The question which Joe had referred to you,)
Why, I told you the cause was "the force of the laws,"

And you said "*It had never occurred to you!*"
This instance will show that your brain is too slow,
And (though your exterior is showy),
Yet so arrant a goose can be no sort of use
To society—*come to your Chloë!*
You'll find *no one*, like me, who can manage to see
Your meaning, you talk so obscurely:
Why, if once *I* were gone, how *would* you get on?
Come, you know what I mean, Damon, surely?

⌊*Ch. Ch., Oxford. B. B.*¹

18.129 Oh pudgy podgy pup

Source: sent to C. H. O. Daniel, November 23, 1880; also set up as proof by Daniel

Oh pudgy podgy pup!
Why *did* they wake you up?
Those crude nocturnal yells
Are *not* like silver bells:
Nor ever would recall
Sweet Music's 'dying fall.'
They rather bring to mind
The bitter winter wind
Through keyholes shrieking shrilly
When nights are dark & chilly:
Or like some dire duett,
Or quarrelsome quartette,
Of cats who chant their joys
With execrable noise,
And murder Time & Tune
To vex the patient Moon!

Quoted from *Twelfth
Night* by William
Shakespeare

18.130 Oh ye whose hearts have nerves

Source: Moans from the Miserable (extracted)

Oh ye whose hearts have nerves,
Oh ye whose eyes have tears,
It is not your love you are wearing out,
But living victim's ears!

18.131 Tottles

Source: Sylvie and Bruno Concluded (extracted, connected)

“One thousand pounds per annum
Is not so bad a figure, come!”
Cried Tottles. “And I tell you, flat,
A man may marry well on that!
To say ‘the Husband needs the Wife’
Is *not* the way to represent it.
The crowning joy of Woman’s life
Is *Man!*” said Tottles (and he meant it).

The blissful Honey-moon is past:
The Pair have settled down at last:
Mamma-in-law their home will share,
And make their happiness her care.
“Your income is an ample one;
Go it, my children!” (And they went it).
“I *rayther* think this kind of fun
Won’t last!” said Tottles (and he meant it).

They took a little country-box—
A box at Covent Garden also:
They lived a life of double-knocks,
Acquaintances began to call so:
Their London house was much the same
(It took three hundred, clear, to rent it):
“Life is a very jolly game!”
Cried happy Tottles (and he meant it).

‘Contented with a frugal lot’
(He always used that phrase at Gunter’s),
He bought a handy little yacht—
A dozen serviceable hunters—
The fishing of a Highland Loch—
A sailing-boat to circumvent it—
“The sounding of that Gaelic ‘och’
Beats *me!*” said Tottles (and he meant it).

But oh, the worst of human ills
(Poor Tottles found) are ‘little bills’!
And, with no balance in the Bank,
What wonder that his spirits sank?
Still, as the money flowed away,
He wondered how on earth she spent it.
“You cost me twenty pounds a day,
At least!” cried Tottles (and he meant it).

She sighed. “Those Drawing Rooms, you know!
I really never thought about it:
Mamma declared we ought to go—

We should be Nobodies without it.
 That diamond-circlet for my brow—
 I quite believed that *she* had sent it,
 Until the Bill came in just now——”
 “*Viper!*” cried Tottles (and he meant it).
 Poor Mrs. T. could bear no more,
 But fainted flat upon the floor.
 Mamma-in-law, with anguish wild,
 Seeks, all in vain, to rouse her child.
 “Quick! Take this box of smelling-salts!
 Don’t scold her, James, or you’ll repent it,
 She’s a *dear* girl, with all her faults——”
 “She *is!*” groaned Tottles (and he meant it).
 “I was a donkey,” Tottles cried,
 “To choose your daughter for my bride!
 ’Twas *you* that bid us cut a dash!
 ’Tis *you* have brought us to this smash!
 You don’t suggest one single thing
 That can in any way prevent it——
 Then what’s the use of arguing?
Shut up!” cried Tottles (and he meant it).
 “And, now the mischief’s done, perhaps
 You’ll kindly go and pack your traps?
 Since *two* (your daughter and your son)
 Are Company, but *three* are none.
 A course of saving we’ll begin:
 When change is needed, *I’ll* invent it:
 Don’t think to put *your* finger in
This pie!” cried Tottles (and he meant it).
 See now this couple settled down
 In quiet lodgings, out of town:
 Submissively the tearful wife
 Accepts a plain and humble life:
 Yet begs one boon on bended knee:
 ‘My ducky-darling, don’t resent it!
 Mamma might come for two or three——’
 ‘NEVER!’ yelled Tottles. And he meant it.

18.132 Phantasmagoria

Source: Phantasmagoria (without images, with minor differences as noted); Rhyme? and Reason? (different editions differ in punctuation)

Canto I. *The Dryfynq.*

One ¹winter night, at half-past nine,
Cold, tired, and cross, and muddy
I had come home, too late to dine,
And supper, with cigars and wine,
Was waiting in the study.

There was a strangeness in the room,
And Something ²white and wavy
Was standing near me in the gloom—
I took it for the carpet-broom
Left by that careless slavey.

But presently the Thing began
To ³shiver and to sneeze:
On which I said “Come, come, my man!
That’s a most inconsiderate plan.
Less noise there, if you please!”

“I’ve caught a cold,” the Thing replies,
“Out there upon the landing.”
I turned to look in some surprise,
And there, before my very eyes,
A little Ghost was standing!

He trembled when he caught my eye,
And got behind a chair.
“How came you here,” I said, “and why?
I never saw a thing so shy.
Come out! Don’t shiver there!”

He said “I’d gladly tell you how,
And also tell you why;
But” (here he gave a little bow)
“You’re in so bad a temper now,
You’d think it all a lie.

“And as to being in a fright,
Allow me to remark
That Ghosts have just as good a right,
In every way, to fear the light,
As Men to fear the dark.”

“No plea,” said I, “can well excuse

¹wintry

²thin

³shudder

Such cowardice in you:
For Ghosts can visit when they choose,
Whereas we Humans ca'n't refuse
To grant the interview."

He said "A flutter of alarm
Is not unnatural, is it?
I really feared you meant some harm:
But, now I see that you are calm,
Let me explain my visit.

⌊ "Houses are classed, I beg to state,⁴
According to the number
Of Ghosts that they accommodate:
(The Tenant merely counts as *weight*,
With Coals and other lumber).

"This is a 'one-ghost' house, and you
When you arrived last summer,
May have remarked a Spectre who
Was doing all that Ghosts can do
To welcome the new-comer.

"In Villas this is always done—
However cheaply rented:
For, though of course there's less of fun
When there is only room for one,
Ghosts have to be contented.

⌊ That Spectre⁵ left you on the Third—
Since then you've not been haunted:
⌊ For⁶, as he never sent us word,
'Twas quite by accident we heard
That any one was wanted.

"A Spectre has first choice, by right,
In filling up a vacancy;
Then Phantom, Goblin, Elf, and Sprite—
If all these fail them, they invite
The nicest Ghoul that they can see.

"The Spectres said the place was low,
And that you kept bad wine:
So, as a Phantom had to go,
And I was first, of course, you know,
I couldn't well decline."

"No doubt," said I, "they settled who
Was fittest to be sent:
Yet still to choose a brat like you,
To haunt a man of forty-two,
Was no great compliment!"

⁴This and the following two verses only appears in *Rhyme? and Reason?*

⁵The last ghost

⁶But

“I’m not so young, Sir,” he replied,
“As you might think. The fact is,
In caverns by the water-side,
And other places that I’ve tried,
I’ve had a lot of practice:

“But I have never taken yet
A strict domestic part,
And in my flurry I forget
The Five Good Rules of Etiquette
We have to know by heart.”

My sympathies were warming fast
Towards the little fellow:
He was so utterly⁷ aghast
At having found a Man at last,
And looked so scared and yellow.

“At least,” I said, “I’m glad to find
A Ghost is not a *dumb* thing!
But pray sit down: you’ll feel inclined
(If, like myself, you have not dined)
To take a snack of something:

“Though, certainly, you don’t appear
A thing to offer *food* to!
And then I shall be glad to hear—
If you will say them loud and clear—
The Rules that you allude to.”

“Thanks! You shall hear them by and by
This *is* a piece of luck!”

“What may I offer you?” said I.
“Well, since you *are* so kind, I’ll try
A little bit of duck.

“*One* slice! And may I ask you for
Another drop of gravy⁸?”

I sat and looked at him in awe,
For certainly I never saw
A thing so white and wavy.

And still he seemed to grow more white,
More vapoury, and wavier—
Seen in the dim and flickering light,
As he proceeded to recite
His “Maxims of Behaviour.”

Canto II. *Of Five Rules.*

“My First—but don’t suppose,” he said,
“I’m setting you a riddle—

⁷very much

⁸A little drop more gravy

“In caverns by the water-side”

Is—if your Victim be in bed,
 Don't touch the \sphericalangle curtains⁹ at his head,
 But take \sphericalangle them¹⁰ in the middle,
 “And wave them slowly \sphericalangle in and out¹¹,
 \sphericalangle While drawing them asunder;¹²
 And in a minute's time, \sphericalangle no doubt,¹³
 \sphericalangle He'll raise his head and look about¹⁴
 \sphericalangle With eyes of wrath and wonder.¹⁵

“And here you must on no pretence
 Make the first observation.
 Wait for the Victim to commence:
 No Ghost of any common sense
 Begins a conversation.

“If he should say ‘*How came you here?*’
 (The way that *you* began, Sir,)
 In such a case your course is clear—
 ‘ \sphericalangle *On the bat's back,*¹⁶ *my little dear!*’
 \sphericalangle Is the appropriate¹⁷ answer.

“ \sphericalangle If after this he says no more,¹⁸

⁹curtain

¹⁰it

¹¹to and fro

¹²As if the wind was at it

¹³or so

¹⁴He'll be awaik—and this you'll know

¹⁵By hearing him say ‘*Drat it!*’

¹⁶Just as you please

¹⁷Or any other

¹⁸But if the wretch says nothing more

You'd best perhaps curtail your
Exertions—go and shake the door,
And then, if he begins to snore,
You'll know the thing's a failure.

“By day, if he should be alone—
At home or on a walk—
You merely give a hollow groan,
To indicate the kind of tone
In which you mean to talk.

“But if you find him with his friends,
The thing is rather harder.
In such a case success depends
On picking up some candle-ends,
Or butter, in the larder.

“With this you make a kind of slide
(It answers best with suet),
On which you must contrive to glide,
And swing yourself from side to side—
One soon learns how to do it.

“The Second tells us what is right
In ceremonious calls:—
'*First burn a blue or crimson light*'
(A thing I quite forgot to-night),
'*Then scratch the door or walls.*'”

I said “You'll visit *here* no more,
If you attempt the Guy.
I'll have no bonfires on *my* floor—
And, as for scratching at the door,
I'd like to see you try!”

“The Third was written to protect
The interests of the Victim,
And tells us, as I recollect,
To treat him with a grave respect,
And not to contradict him.”

“That's plain,” said I, “as Tare and Tret,
To any comprehension:
I only wish *some* Ghosts I've met
Would not so *constantly* forget
The maxim that you mention!”

“Perhaps,” he said, “*you* first transgressed
The laws of hospitality:
⌊All Ghosts instinctively detest¹⁹
⌊The Man that fails to treat his guest²⁰
With proper cordiality.

“If you address a Ghost as ‘Thing!’

¹⁹You'll mostly come off second-best

²⁰When you omit to treat your guest

“And swing yourself from side to side”

Or strike him with a hatchet,
 He is permitted by the King
 To drop all *formal* parleying—
 And then you're *sure* to catch it!

"The Fourth prohibits trespassing
 Where other Ghosts are quartered:
 And those convicted of the thing
 (Unless when pardoned by the King)
 Must instantly be *slaughtered*.⁷²¹

"That simply means 'be cut up small':⁷²²
 Ghosts soon unite anew:
 The process scarcely hurts at all—
 Not more than when *you're* what you call
 'Cut up' by a Review.

"The Fifth is one you may prefer
 That I should quote entire:—
The King must be addressed as 'Sir.'
This, from a simple courtier,
Is all the Laws require:

"*But, should you wish to do the thing*
With out-and-out politeness,
Accost him as 'My Goblin King!'
And always use, in answering,
The phrase 'Your Royal Whiteness!'

"I'm getting rather hoarse, I fear,
 After so much reciting:
 So, if you don't object, my dear,
 We'll try a glass of bitter beer—
 I think it looks inviting."

Canto III. Scarmogef.

"And did you really walk," said I,
 "On such a wretched night?
 I always fancied Ghosts could fly—
 If not exactly in the sky,
 Yet at a fairish height."
 "It's very well," said he, "for Kings
 To *soar*⁷²³ above the earth:

⁷²¹Additional verse in *Phantasmagoria*:

I said "That rule appears to me
 Wanting in common sense—"
 "'To slaughter' does not mean," said he,
 "'To kill' with us, and that, you see,
 Makes a *great* difference.

⁷²²In fact we're simply cut up small

⁷²³fly

But Phantoms often find that wings—
Like many other pleasant things—
Cost more than they are worth.
“Spectres of course are rich, and so
Can buy them from the Elves:
But *we* prefer to keep below—
They’re stupid company, you know.
For any but themselves:

“For, though they claim to be exempt
From pride, they treat a Phantom
As something quite beneath contempt—
Just as no Turkey ever dreamt
Of noticing a Bantam.”

“They seem too proud,” said I, “to go
To houses such as mine.
Pray, how did they contrive to know
So quickly that ‘the place was low,’
And that I ‘kept bad wine’?”

“Inspector Kobold _{came to}²⁴ you—”

The little Ghost began.
Here I broke in—“Inspector who?
Inspecting Ghosts is something new!
Explain yourself my man!”

“His name is Kobold,” said my guest:
“One of the Spectre order:
You’ll very often see him dressed
In a yellow gown, a crimson vest,
And a night-cap with a border.

“He tried the Brocken business first,
But caught a sort of chill;
So came to England to be nursed,
And here it took the form of *thirst*,
Which he complains of still.

_{Port-wine, he says, when rich and sound,}²⁵
Warms his old bones like nectar:
And as the inns, where it is found,
Are his especial hunting-ground,
We call him the *Inn-Spectre*.”

_{I bore it—bore it like a man—}²⁶
_{This agonizing witticism!}²⁷
And nothing could be sweeter than
My temper, till the Ghost began
Some most provoking _{criticism}²⁸.

“Cooks need not be indulged in waste;
Yet still you’d better teach them
Dishes should have *some sort* of taste.
Pray, why are all the cruets placed
Where nobody can reach them?

“That man of yours will never earn
His living as a waiter!
Is that queer *thing* supposed to burn?
(It’s far too dismal a concern
To call a Moderator).

“The duck was tender, but the peas
Were very much too old:
And just remember, if you please,

²⁴called on

²⁵In *Phantasmagoria*, this verse is:

“The remedy, *he says*, is port,
(Which he compares to nectar.)
And, as the inns where it is bought
Have always been his chief resort,
We call him the ‘*Inn-Spectre*.’”

²⁶I bear as well as any man

²⁷The washiest of witticisms

²⁸criticisms

“And here it took the form of *thirst*”

The *next* time you have toasted cheese,
 Don't let them send it cold.

"You'd find the bread improved, I think,
 By getting better flour:
 And have you anything to drink
 That looks a *little* less like ink,
 And isn't *quite* so sour?"

Then, peering round with curious eyes,
 He muttered "Goodness gracious!"
 And so went on to criticise—
 "Your room's an inconvenient size:
 It's neither snug nor spacious.

"That narrow window, I expect,
 Serves but to let the dusk in—"
 "But please," said I, "to recollect"²⁹
 'Twas fashioned by an architect
 Who pinned his faith on Ruskin!"

"I don't care who he was, Sir, or
 On whom he pinned his faith!
 Constructed by whatever law,
 So poor a job I never saw,
 As I'm a living Wraith!

"What a re-markable cigar!
 How much are they a dozen?"
 I growled "No matter what they are!
 You're getting as familiar
 As if you were my cousin!

"Now that's a thing *I will not stand*,
 And so I tell you flat."
 "Aha," said he, "we're getting grand!"
 (Taking a bottle in his hand)
 "I'll soon arrange for *that*!"

And here he took a careful aim,
 And gaily cried "Here goes!"
 I tried to dodge it as it came,
 But somehow caught it, all the same,
 Exactly on my nose.

And I remember nothing more
 That I can clearly fix,
 Till I was sitting on the floor,
 Repeating "Two and *five*"³⁰ are four,
 But *five*"³¹ and *two* are six."

What really passed I never learned,
 Nor guessed: I only know

²⁹I cried "But please to recollect

³⁰three

³¹three

That, when at last my sense returned,
The lamp, neglected, dimly burned—
The fire was getting low—
Through driving mists I seemed to see
 A Thing that smirked and smiled;⁷³²
And found that he was giving me
 A lesson in Biography,⁷³³
 As if I were a child.⁷³⁴

Canto IV. *His Nourture.*

“Oh, when I was a little Ghost,
A merry time had we!

³²A form of sheet and bone

³³The whole of his biography

³⁴In a familiar tone

Each seated on his favourite post,
 We chumped and chawed the buttered toast
 They gave us for our tea.”

“That story is in print!” I cried.
 “Don’t say it’s not, because
 It’s known as well as Bradshaw’s Guide!”
 (The Ghost uneasily replied
 He hardly thought it was).

“It’s not in Nursery Rhymes? And yet
 I almost think it is—
 ‘Three little Ghosteses’ were set
 ‘On posteses,’ you know, and ate
 Their ‘buttered toasteses.’

“I have the book; so, if you doubt it—”
 I turned to search the shelf.
 “Don’t stir!” he cried. “We’ll do without it;
 I now remember all about it;
 I wrote the thing myself.

“It came out in a ‘Monthly,’ or
 At least my agent said it did:
 Some literary swell, who saw
 It, thought it seemed adapted for
 The Magazine he edited.

“My father was a Brownie, Sir;
 My mother was a Fairy.
 The notion had occurred to her,
 The children would be happier,
 If they were taught to vary.

“The notion soon became a craze;
 And, when it once began, she
 Brought us all out in different ways—
 One was a Pixy, two were Fays,
 Another was a Banshee;

“The Fetch and Kelpie went to school,
 And gave a lot of trouble;
 Next came a Poltergeist and Ghoul,
 And then two Trolls (which broke the rule),
 A Goblin, and a Double—

“(If that’s a snuff-box on the shelf,”
 He added with a yawn,
 “I’ll take a pinch)—next came an Elf,
 And then a Phantom (that’s myself),
 And last, a Leprechaun.

“One day, some Spectres chanced to call,
 Dressed in the usual white:
 I stood and watched them in the hall,
 And couldn’t make them out at all,

They seemed so strange a sight.

“I wondered what on earth they were,
That looked all head and sack;
But Mother told me not to stare,
And then she twitched me by the hair,
And punched me in the back.

“Since then I’ve often wished that I
Had been a Spectre born.
But what’s the use?” (He heaved a sigh).

“*They* are the ghost-nobility,
And look on *us* with scorn.

“My phantom-life was soon begun:
When I was barely six,
I went out with an older one—
And just at first I thought it fun,
And learned a lot of tricks.”³⁵

“I’ve haunted dungeons, castles, towers—
Wherever I was sent:
I’ve often sat and howled for hours,
Drenched to the skin with driving showers,
Upon a battlement.

³⁵And went at it like bricks

“Upon a battlement.”
(Frontispiece)

“It’s quite old-fashioned now to groan
When you begin to speak:
This is the newest thing in tone—”
And here (it chilled me to the bone)
He gave an *awful* squeak.

“Perhaps,” he added, “to *your* ear
That sounds an easy thing?
Try it yourself, my little dear!
It took *me* something like a year,
With constant practising.

“And when you’ve learned to squeak, my man
And caught the double sob,
You’re pretty much where you began:
Just try and gibber if you can!
That’s something *like* a job!

“*I’ve* tried it, and can only say
I’m sure you couldn’t do it, e-
ven if you practised night and day,
Unless you have a turn that way,
And natural ingenuity.

“Shakspeare I think it is who treats
Of Ghosts, in days of old,
Who ‘gibbered in the Roman streets,’
Dressed, if you recollect, in sheets—
They must have found it cold.

“I’ve often spent ten pounds on stuff,
In dressing as a Double;
But, though it answers as a puff,
It never has effect enough
To make it worth the trouble.

“Long bills soon quenched the little thirst
I had for being funny.
The setting-up is always worst:
Such heaps of things you want at first,
One must be made of money!

“For instance, take a Haunted Tower,
With skull, cross-bones, and sheet;
Blue lights to burn (say) two an hour,
Condensing lens of extra power,
And set of chains complete:

“What with the things you have to hire—
The fitting on the robe—
And testing all the coloured fire—
The outfit of itself would tire
The patience of a Job!

“And then they’re so fastidious,
The Haunted-House Committee:

I've often known them make a fuss
 Because a Ghost was French, or Russ,
 Or even from the City!

"Some dialects are objected to—
 For one, the *Irish* brogue is:
 And then, for all you have to do,
 One pound a week they offer you,
 And find yourself in Bogies!"

Canto V. *Hyperment.*

"Don't they consult the 'Victims,' though?"
 I said. "They should, by rights,
 Give them a chance—because, you know,
 The tastes of people differ so,
 Especially in Sprites."

The Phantom shook his head and smiled.
 "Consult them? Not a bit!
 'Twould be a job to drive one wild,
 To satisfy one single child—
 There'd be no end to it!"

"Of course you can't leave *children* free,"
 Said I, "to pick and choose:
 But, in the case of men like me,
 I think 'Mine Host' might fairly be
 Allowed to state his views."

He said "It really wouldn't pay—
 Folk are so full of fancies.

We visit for a single day,
 And whether then we go, or stay,
 Depends on circumstances.

“And, though we don’t consult ‘Mine Host’
 Before the thing’s arranged,
 Still, if he often³⁶ quits his post,
 Or is not a well-mannered Ghost,
 Then you can have him changed.

“But if the host’s a man like you—
 I mean a man of sense;
 And if the house is not too new—”
 “Why, what has *that*,” said I, “to do
 With Ghost’s convenience?”

“A new house does not suit, you know—
 It’s such a job to trim it:
 But, after twenty years or so,
 The wainscotings begin to go,
 So twenty is the limit.”

“To trim” was not a phrase I could
 Remember having heard:
 “Perhaps,” I said, “you’ll be so good
 As tell me what is understood
 Exactly by that word?”

“It means the loosening all the doors,”
 The Ghost replied, and laughed:
 “It means the drilling holes by scores
 In all the skirting-boards and floors,
 To make a thorough draught.

³⁶the tenant

“You’ll sometimes find that one or two
 Are all you really need
 To let the wind come whistling through—
 But *here* there’ll be a lot to do!”
 I faintly gasped “Indeed!”
 “If I’d been rather later, I’ll
 Be bound,” I added, trying
 (Most unsuccessfully) to smile,
 “You’d have been busy all this while,
 Trimming and beautifying?”
 “Why, no,” said he; “perhaps I should
 Have stayed another minute—
 But still no Ghost, that’s any good,
 Without an introduction would
 Have ventured to begin it.
 “The proper thing, as you were late,
 Was certainly to go:
 But, with the roads in such a state,
 I got the Knight-Mayor’s leave to wait
 For half an hour or so.”
 “Who’s the Knight-Mayor?” I cried. Instead
 Of answering my question,
 “Well! If you don’t know *that*,” he said,
 “Either you never go to bed,
 Or you’ve a grand digestion!
 “He goes about and sits on folk
 That eat too much at night:
 His duties are to pinch, and poke,
 And squeeze them till they nearly choke.”
 (I said “It serves them right!”)
 “And folk that ³⁷ on things like these—”
 He muttered, “eggs and bacon—
 Lobster—and duck—and toasted cheese—
 If they don’t get an awful squeeze,
 I’m very much mistaken!
 “He is immensely fat, and so
 Well suits the occupation:
 In point of fact, if you must know,
 We used to call him, years ago,
 The Mayor and Corporation!
 “The day he was elected Mayor
 I *know* that every Sprite meant
 To vote for *me*, but did not dare—
 He was so frantic with despair
 And furious with excitement.

³⁷stuff

“He goes about and sits on folk”

“When it was over, for a whim,
He ran to tell the King;
And being the reverse of slim,
A two-mile trot was not for him
A very easy thing.

“So, to reward him for his run
(As it was baking hot,
And he was over twenty stone),
The King proceeded, half in fun,
To knight him on the spot.”

“’Twas a great liberty to take!”
(I fired up like a rocket).
“He did it just for punning’s sake:
‘The man,’ says Johnson, ‘that would make
A pun, would pick a pocket!’”

“A man,” said he, “is not a King.”
I argued for a while,
And did my best to prove the thing—
The Phantom merely listening
With a contemptuous smile.

At last, when, breath and patience spent,
I had recourse to smoking—
“Your *aim*,” he said, “is excellent:
But—when you call it *argument*—
Of course you’re only joking?”

Stung by his cold and snaky eye,

I roused myself at length
 To say "At least I do defy
 The veriest sceptic to deny
 That union is strength!"
 "That's true enough," said he, "yet stay—"
 I listened in all meekness—
 "*Union* is strength, I'm bound to say;
 In fact, the thing's as clear as day;
 But *onions*—are a weakness."

Canto VI. *Dyscomfyture.*

As one who strives a hill to climb,
 Who never climbed before:
 Who finds it, in a little time,
 Grow every moment less sublime,
 And votes the thing a bore:
 Yet, having once begun to try,
 Dares not desert his quest,
 But, climbing, ever keeps his eye
 On one small hut against the sky,
 Wherein he hopes to rest:
 Who climbs till nerve and force ^{are}³⁸ spent,
 With many a puff and pant:
 Who still, as rises the ascent,
 In language grows more violent,
 Although in breath more scant:
 Who, climbing, gains at length the place
 That crowns the upward track;
 And, entering with unsteady pace,
 Receives a buffet in the face
 That lands him on his back:
 And feels himself, like one in sleep,
 Glide swiftly down again,
 A helpless weight, from steep to steep,
 Till, with a headlong giddy sweep,
 He ^{drops upon}³⁹ the plain—
 So I, that had resolved to bring
 Conviction to a ghost,
 And found it quite a different thing
 From any human arguing,
 Yet dared not quit my post
 But, keeping still the end in view
 To which I hoped to come,
 I strove to prove the matter true

³⁸be

³⁹pitch into

By putting everything I knew
 Into an axiom:
 Commencing every single phrase
 With 'therefore' or 'because,'
 I blindly reeled, a hundred ways,
 About the syllogistic maze,
 Unconscious where I was.
 Quoth he "That's regular clap-trap:
 Don't bluster any more.
 Now *do* be cool and take a nap!
 ♪Such a ridiculous old chap⁴⁰
 ♪Was never seen before!⁴¹
 "You're like a man I used to meet,
 Who got one day so furious
 In arguing, the simple heat
 Scorched both his slippers off his feet!"
 I said "*That's very curious!*"
 "Well, it *is* curious, I agree,
 And sounds perhaps like fibs:
 But still it's true as true can be—
 As sure as your name's Tibbs," said he.
 I said "My name's *not* Tibbs."
 "*Not* Tibbs!" he cried—his tone became
 A shade or two less hearty—
 "Why, no," said I. "My proper name
 Is Tibbets—" "Tibbets?" "Aye, the same."
 "Why, then YOU'RE NOT THE PARTY!"
 With that he struck the board a blow
 That shivered half the glasses.
 "Why couldn't you have told me so
 Three quarters of an hour ago,
 You ♪prince⁴² of all the asses?
 "To walk four miles through mud and rain,
 To spend the night in smoking,
 And then to find that it's in vain—
 And I've to do it all again—
 It's really *too* provoking!
 "Don't talk!" he cried, as I began
 To mutter some excuse.
 "Who can have patience with a man
 That's got no more discretion than
 An idiotic goose?
 "To keep me waiting here, instead
 Of telling me at once

⁴⁰You're such a peppery old chap

⁴¹As never was before!

⁴²king

“Scorched both his slippers off his feet”

That this was not the house!" he said.
 "There, that'll do—be off to bed!
 Don't gape like that, you dunce!"

"It's very fine to throw the blame
 On *me* in such a fashion!
 Why didn't you enquire my name
 The very minute that you came?"
 I answered in a passion.

"Of course it worries you a bit
 To come so far on foot—
 But how was *I* to blame for it?"
 "Well, well!" said he. "I must admit
 That isn't badly put.

"And certainly you've given me
 The best of wine and victual—
 Excuse my violence," said he,
 "But accidents like this, you see,
 They put one out a little.

"Twas *my* fault after all, I find—
 Shake hands, old Turnip-top!"
 The name was hardly to my mind,
 But, as no doubt he meant it kind,
 I let the matter drop.

"Good-night, old Turnip-top, good-night!
 When I am gone, perhaps
 They'll send you some inferior Sprite,
 Who'll keep you in a constant fright
 And spoil your soundest naps.

"Tell him you'll stand no sort of trick;
 Then, if he leers and chuckles,
 You just be handy with a stick
 (Mind that it's pretty hard and thick)
 And rap him on the knuckles!

"Then carelessly remark 'Old coon!
 Perhaps you're not aware
 That, if you don't behave, you'll soon
 Be chuckling to another tune—
 And so you'd best take care!'

"That's the right way to cure a Sprite
 Of such-like goings-on—
 But gracious me! It's *getting*⁷⁴³ light!
 Good-night, old Turnip-top, good-night!"
 A nod, and he was gone.

Canto VII. Sad Souvenaunce.

“What’s this?” I pondered. “Have I slept?
Or can I have been drinking?”
But soon a gentler feeling crept
Upon me, and I sat and wept
An hour or so, like winking.

“No need for Bones to hurry so!”⁴⁴
I sobbed⁴⁵. “In fact, I doubt
If it was worth his while to go—
And who is Tibbs, I’d like to know,
To make such work about?”

“If Tibbs is anything like me,
It’s *possible*,” I said,
“He won’t be over-pleased to be
Dropped in upon at half-past three,
After he’s snug in bed.

“And if Bones plagues him anyhow—
Squeaking and all the rest of it,
As he was doing here just now—
I prophesy there’ll be a row,
And Tibbs will have the best of it!”

Then, as my tears could never bring

⁴³nearly

⁴⁴This and the next two verses come in *Phantasmagoria* after “To try it any farther”

⁴⁵Thought I

‘The friendly⁴⁶ Phantom back,
It seemed to me the proper thing
To mix another glass, and sing
The following ‘Coronach.’⁴⁷

“And Tibbs will have the best of it”

*‘And art thou gone, beloved Ghost?
Best of Familiars!
Nay then, farewell, my duckling roast,
Farewell, farewell, my tea and toast,
My meerschaum and cigars!
‘The hues of life are dull and gray,
The sweets of life insipid,
When thou, my charmer, art away—
Old Brick, or rather, let me say,
Old Parallelepiped!’*

⁴⁶My favourite

⁴⁷In *Phantasmagoria*, a headline “Coronach” follows

Instead of singing Verse the Third,
 I ceased—abruptly, rather:
 But, after such a splendid word,
 I felt that it would be absurd
 To try it any farther.

 So with a yawn I went my way
 To seek the welcome downy,
 And slept, and dreamed till break of day
 Of Poltergeist and Fetch and Fay
 And Leprechaun and „Brownie!”⁴⁸

 For years I’ve not been visited
 By any kind of Sprite;
 Yet still they echo in my head,
 Those parting words, so kindly said,
 “Old Turnip-top, good-night!”

⁴⁸Additional verses in *Phantasmagoria*:

And never since, by sea or land,
 On mountain or on plain,
 ’Mid Arctic snow, or Afric sand—
 Not even ‘in the Strand, the Strand!’
 Has Bones appeared again.
 A Quaker friend accosted me—
 Tall, stiff, as any column—
 “Thee’rt out of sorts, I fear,” said he;
 “Verily I am grieved to see
 Thee go’st so grave and solemn.”
 “*The ghost’s* not grave,” I said, “but gay;
 Not solemn, but convivial:
 I’m ‘*out of spirits,*’ you should say,
 Not ‘*out of sorts*’—” he turned away,
 Thinking the answer trivial.

18.133 Only a Woman's Hair

Source: The College Rhymes, March 1862 (with minor differences as noted);
Phantasmagoria (with minor differences as noted); Three Sunsets

[After the death of Dean Swift, there was found among his papers a small packet containing a single lock of hair and inscribed with the above words.]¹

'Only a woman's hair'! Fling it aside!
A bubble on Life's mighty stream:
Heed it not, man, but watch the broadening tide
Bright with the western beam.
Nay! In those words there rings from other years
The echo of a long low cry,
Where a proud spirit wrestles with its tears
In loneliest agony.
And, as I touch that lock, strange visions throng²
Upon my soul with dreamy grace—³
Of woman's hair, the theme of poet's song⁴
In every time and place.⁵
A child's bright tresses, by the breezes kissed⁶
To sweet disorder as she flies,
Veiling, beneath a cloud of golden mist,
Flushed cheek and laughing eyes—
Or fringing,⁷ like a shadow, raven-black,
The glory of a queen-like face—
Or from a gipsy's sunny brow⁸ tossed back
In wild and wanton grace—
Or crown-like on the hoary head of Age,⁹
Whose tale of life is well-nigh¹⁰ told—
Or, last, in dreams I make my pilgrimage
To Bethany of old.

¹Only in *Phantasmagoria*, in *College Rhymes*: "After Dean Swift's death, a small packet was found among his papers, containing . . ." In *College Rhymes* there is also a footnote on the title: "By a strange coincidence a poem bearing the same title appears in the current number of *London Society* (March 1862). The poem in *College Rhymes* was written and in type before that number of the magazine appeared."

²"rise" in *Phantasmagoria*

³"Before me in a shadowy throng—" in *Phantasmagoria*

⁴" . . . , the joy of lovers' eyes," in *Phantasmagoria*

⁵"The theme of poet's song" in *Phantasmagoria*

⁶In *College Rhymes* this verse is:

A child's bright tresses, in a tangled braid,
O'er circling arms that fondly roll,
Where full blue eyes, undimm'd by sinful shade,
Look straight from soul to soul:

⁷"girding" in *College Rhymes*

⁸"laughing eyes" in *College Rhymes*

⁹"Or grey and reverend on the brows of age" in *College Rhymes*

¹⁰"nearly" in *College Rhymes*

I see the feast—the purple and the gold—
 The gathering crowd of Pharisees,
 Whose scornful eyes are centred to behold
 Yon woman on her knees.

 The stifled sob rings strangely on mine ears,
 Wrung from the depth of sin's despair:
 And still she bathes the sacred feet with tears,
 And wipes them with her hair.

 He scorned not then the simple loving deed
 Of her, the lowest and the last;
 Then scorn not thou, but use with earnest heed
 This relic of the past.

 The eyes that loved it once no longer wake:
 So lay it by with reverent care—
 Touching¹¹ it tenderly for sorrow's sake—
 It is a woman's hair.

Feb. 17, 1862.¹²

18.134 A Lesson in Latin

Source: The Jabberwock, June 1888 (with minor differences as noted); Three Sunsets

Our Latin books, in motley row,
 Invite us to our¹ task—
Gay Horace, stately Cicero:
Yet there's one verb, when once we know,
 No higher skill we ask:
This ranks all other lore above—
We've learned "'Amare' means 'to love!'"
So, hour by hour, from flower to flower,
 We sip the sweets of Life:
Till, all² too soon, the clouds arise,
 And flaming cheeks and flashing eyes³
 Proclaim the dawn of strife:
With half a smile and half a sigh,
"Amare! Bitter One!" we cry.
Last night we owned, with looks forlorn,
 "Too well the scholar knows
There is no rose without a thorn"—
But peace is made! We sing, this morn,
 "No thorn without a rose!"
Our Latin lesson is complete:
We've learned that Love is Bitter-Sweet!

May, 1888.⁴

18.135 The Wandering Burgess

Source: The Vision of the Three T's (extracted)

Our Willie had been sae lang awa'
Frae bonnie Oxford toon,
The townfolk they were greeting a'
As they went up and doon.

He hadna been gane a year, a year,
A year but barely ten,
When word cam unto Oxford toon.
Our Willie wad come agen.

Willie he stude at Thomas his Gate,
And made a lustie din;
And who so blithe as the gate-porter
To rise and let him in?

'Now enter Willie, now enter Willie,
And look around the place.
And see the pain that we have ta'en
Thomas his Quad to grace.'

The first look that our Willie cast,
He leuch loud laughters three,
The neist look that our Willie cast,
The tear blindit his e'e.

Sae square and stark the Tea-chest frowned
Athwart the upper air,
But when the Trench our Willie saw,
He thocht the Tea-chest fair.

Sae murderous-deep the Trench did gape
The parapet aboon.
But when the Tunnel Willie saw.
He loved the Trench eftsoon.

'Twas mirk beneath the tane archway,
'Twas mirk beneath the tither;
Ye wadna ken a man therein.
Though it were your ain dear brither.

He turned him round and round about.
And looked upon the Three;
And dismal grew his countenance.
And drumlie grew his e'e.

'What cheer, what cheer, my gallant knight?'
The gate-porter 'gan say.
'Saw ever ye sae fair a sight
As ye have seen this day?'

'Now haud your tongue of your prating, man:
Of your prating now let me be.

For, as I'm true knight, a fouler sight
I'll never live to see.

'Before I'd be the ruffian dark
Who planned this ghastly show,
I'd serve as secretary's clerk
To Ayrton or to Lowe.

'Before I'd own the loathly thing
That Christ Church Quad reveals,
I'd serve as shoeblack's underling
To Odger and to Beales!'

18.136 Peter and Paul

Source: Sylvie and Bruno (extracted)

“Peter is poor,” said noble Paul,
“And I have always been his friend:
And, though my means to *give* are small,
At least I can afford to *lend*.
How few, in this cold age of greed,
Do good, except on selfish grounds!
But I can feel for Peter’s need,
And I WILL LEND HIM FIFTY POUNDS!”

How great was Peter’s joy to find
His friend in such a genial vein!
How cheerfully the bond he signed,
To pay the money back again!
“We ca’n’t,” said Paul, “be too precise:
’Tis best to fix the very day:
So, by a learned friend’s advice,
I’ve made it Noon, the Fourth of May.”

“But this is April!” Peter said.
“The First of April, as I think.
Five little weeks will soon be fled:
One scarcely will have time to wink!
Give me a year to speculate—
To buy and sell—to drive a trade—”
Said Paul “I cannot change the date.
On May the Fourth it must be paid.”

“Well, well!” said Peter, with a sigh.
“Hand me the cash, and I will go.
I’ll form a Joint-Stock Company,
And turn an honest pound or so.”
“I’m grieved,” said Paul, “to seem unkind:
The money shall of course be lent:
But, for a week or two, I find
It will not be convenient.”

So, week by week, poor Peter came
And turned in heaviness away;
For still the answer was the same,
“I cannot manage it to-day.”
And now the April showers were dry—
The five short weeks were nearly spent—
Yet still he got the old reply,
“It is not quite convenient!”

The Fourth arrived, and punctual Paul
Came, with his legal friend, at noon.
“I thought it best,” said he, “to call:

One cannot settle things too soon.”
 Poor Peter shuddered in despair:
 His flowing locks he wildly tore:
 And very soon his yellow hair
 Was lying all about the floor.
 The legal friend was standing by,
 With sudden pity half unmanned:
 The tear-drop trembled in his eye,
 The signed agreement in his hand:
 But when at length the legal soul
 Resumed its customary force,
 “The Law,” he said, “we ca’n’t control:
 Pay, or the Law must take its course!”
 Said Paul, “How bitterly I rue
 That fatal morning when I called!
 Consider, Peter, what you do!
 You won’t be richer when you’re bald!
 Think you, by rending curls away,
 To make your difficulties less?
 Forbear this violence, I pray:
 You do but add to my distress!”
 “Not willingly would I inflict,”
 Said Peter, “on that noble heart
 One needless pang. Yet why so strict?
 Is *this* to act a friendly part?
 However legal it may be
 To pay what never has been lent,
 This style of business seems to me
 Extremely inconvenient!”
 “No Nobleness of soul have I,
 Like *some* that in this Age are found!”
 (Paul blushed in sheer humility,
 And cast his eyes upon the ground.)
 “This debt will simply swallow all,
 And make my life a life of woe!”
 “Nay, nay, my Peter!” answered Paul.
 “You must not rail on Fortune so!
 “You have enough to eat and drink:
 You are respected in the world:
 And at the barber’s, as I think,
 You often get your whiskers curled.
 Though Nobleness you ca’n’t attain—
 To any very great extent—
 The path of Honesty is plain,
 However inconvenient!”
 “Tis true,” said Peter, “I’m alive:
 I keep my station in the world:
 Once in the week I just contrive

To get my whiskers oiled and curled.
 But my assets are very low:
 My little income's overspent:
 To trench on capital, you know,
 Is always inconvenient!"

"But pay your debts!" cried honest Paul.
 "My gentle Peter, pay your debts!
 What matter if it swallows all
 That you describe as your 'assets'?
 Already you're an hour behind:
 Yet Generosity is best.
 It pinches me—but never mind!
 I WILL NOT CHARGE YOU INTEREST!"

"How good! How great!" poor Peter cried.
 "Yet I must sell my Sunday wig—
 The scarf-pin that has been my pride—
 My grand piano—and my pig!"
 Full soon his property took wings:
 And daily, as each treasure went,
 He sighed to find the state of things
 Grow less and less convenient.

Weeks grew to months, and months to years:
 Peter was worn to skin and bone:
 And once he even said, with tears,
 "Remember, Paul, that promised Loan!"
 Said Paul "I'll lend you, when I can,
 All the spare money I have got—
 Ah, Peter, you're a happy man!
 Yours is an enviable lot!

"I'm getting stout, as you may see:
 It is but seldom I am well:
 I cannot feel my ancient glee
 In listening to the dinner-bell:
 But you, you gambol like a boy,
 Your figure is so spare and light:
 The dinner-bell's a note of joy
 To such a healthy appetite!"

Said Peter "I am well aware
 Mine is a state of happiness:
 And yet how gladly could I spare
 Some of the comforts I possess!
 What *you* call healthy appetite
 I feel as Hunger's savage tooth:
 And, when no dinner is in sight,
 The dinner-bell's a sound of ruth!

"No scare-crow would accept this coat:
 Such boots as these you seldom see.
 Ah, Paul, a single five-pound-note

Would make another man of me!"
Said Paul "It fills me with surprise
To hear you talk in such a tone:
I fear you scarcely realise
The blessings that are all your own!
"You're safe from being overfed:
You're sweetly picturesque in rags:
You never know the aching head
That comes along with money-bags:
And you have time to cultivate
That best of qualities, Content—
For which you'll find your present state
Remarkably convenient!"

Said Peter "Though I cannot sound
The depths of such a man as you,
Yet in your character I've found
An inconsistency or two.
You seem to have long years to spare
When there's a promise to fulfil:
And yet how punctual you were
In calling with that little bill!"

"One can't be too deliberate,"
Said Paul, "in parting with one's pelf.
With bills, as you correctly state,
I'm punctuality itself.
A man may surely claim his dues:
But, when there's money to be *lent*,
A man must be allowed to choose
Such times as are convenient!"

It chanced one day, as Peter sat
Gnawing a crust—his usual meal—
Paul bustled in to have a chat,
And grasped his hand with friendly zeal.
"I knew," said he, "your frugal ways:
So, that I might not wound your pride
By bringing strangers in to gaze,
I've left my legal friend outside!

"You well remember, I am sure,
When first your wealth began to go,
And people sneered at one so poor,
I never used my Peter so!
And when you'd lost your little all,
And found yourself a thing despised,
I need not ask you to recall
How tenderly I sympathised!

"Then the advice I've poured on you,
So full of wisdom and of wit:
All given gratis, though 'tis true

I might have fairly charged for it!
But I refrain from mentioning
Full many a deed I might relate—
For boasting is a kind of thing
That I particularly hate.

“How vast the total sum appears
Of all the kindnesses I’ve done,
From Childhood’s half-forgotten years
Down to that Loan of April One!
That Fifty Pounds! You little guessed
How deep it drained my slender store:
But there’s a heart within this breast,
And I WILL LEND YOU FIFTY MORE!”

“Not so,” was Peter’s mild reply,
His cheeks all wet with grateful tears:
“No man recalls, so well as I,
Your services in bygone years:
And this new offer, I admit,
Is very very kindly meant—
Still, to avail myself of it
Would not be quite convenient!”

18.137 Puck Lost and Found

Source: Three Sunsets

The original manuscript of the first poem (with minor differences in punctuation and signature "Lewis Carroll. Nov. 16, 1891") can be found as scan at <https://www.aguttes.com/en/lot/101079/11064034>.

Puck has fled the haunts of men:
Ridicule has made him wary:
In the woods, and down the glen,
No one meets a Fairy!

"Cream!" the greedy Goblin cries—
Empties the deserted dairy—
Steals the spoons, and off he flies.
Still we seek our Fairy!

Ah! What form is entering?
Lovelit eyes and laughter airy!
Is not this a better thing,
Child, whose visit thus I sing,
Even than a Fairy?

Nov. 22, 1891.

Puck has ventured back agen:
Ridicule no more affrights him:
In the very haunts of men
Newer sport delights him.

Capering lightly to and fro,
Ever frolicking and funning—
"Crack!" the mimic pistols go!
Hark! The noise is stunning!

All too soon will Childhood gay
Realise Life's sober sadness.
Let's be merry while we may,
Innocent and happy Fay!
Elves were made for gladness!

Nov. 25, 1891.

Acrostic: Princess Alice, Prince Charlie

18.138 Ting, Ting, Ting

Source: Bruno's Revenge (extracted, connected, with different spelling and punctuation); Sylvie and Bruno (extracted, connected)

Rise, oh, rise! The daylight dies:
The owls are hooting, ting, ting, ting!
Wake, oh, wake! Beside the lake
The elves are fluting, ting, ting, ting!
Welcoming our Fairy King,
We sing, sing, sing.

Hear, oh, hear! From far and near
The music stealing, ting, ting, ting!
Fairy bells adown the dells
Are merrily pealing, ting, ting, ting!
Welcoming our Fairy King,
We ring, ring, ring.

See, oh, see! On every tree
What lamps are shining, ting, ting, ting!
They are eyes of fiery flies
To light our dining, ting, ting, ting!
Welcoming our Fairy King
They swing, swing, swing.

Haste, oh haste, to take and taste
The dainties waiting, ting, ting, ting!
Honey-dew is stored——

18.139 Round the wondrous globe

Source: inscribed into a copy of Miss Yonge's *Little Lucy's Wonderful Globe* for Miss Ruth Dymes, 1877

Round the wondrous globe I wander wild,
Up and down-hill—Age succeeds to youth—
Toiling all in vain to find a child
Half so loving, half so dear as Ruth.

Acrostic: Ruth

18.140 A Song of Love

Source: Sylvie and Bruno Concluded (extracted, connected, with different punctuation); Three Sunsets

Say, what is the spell, when her fledgelings are cheeping,
That lures the bird home to her nest?
Or wakes the tired mother, whose infant is weeping,
To cuddle and croon it to rest?
What's¹ the magic that charms the glad babe in her arms,
Till it cooes with the voice of the dove?
'Tis a secret, and so let us whisper it low—
And the name of the secret is Love!
For I think it is Love,
For I feel it is Love,
For I'm sure it is nothing but Love!

Say, whence is the voice that, when anger is burning,
Bids the whirl of the tempest to cease?
That stirs the vexed soul with an aching—a yearning
For the brotherly hand-grip of peace?
Whence the music that fills all our being—that thrills
Around us, beneath, and above?
'Tis a secret: none knows how it comes, how it goes—
But the name of the secret is Love!
For I think it is Love,
For I feel it is Love,
For I'm sure it is nothing but Love!

Say, whose is the skill that paints valley and hill,
Like a picture so fair to the sight?
That flecks the green meadow with sunshine and shadow,
Till the little lambs leap with delight?
'Tis a secret untold to hearts cruel and cold,
Though 'tis sung, by the angels above,
In notes that ring clear for the ears that can hear—
And the name of the secret is Love!
For I think it is Love,
For I feel it is Love,
For I'm sure it is nothing but Love!

18.141 Terrors

Source: Rectory Magazine

See the planets as they rise,
Each upon his starless way,
Look on us with angry eyes,
Do they not appear to say,
“Stupid fellow! hold your tongue!
‘Seek not thus to goad us on!
‘You in fact are much too young,
‘To offer your opinion!”

Seest thou not the mountains swell?
Seest thou not the trees draw near?
Ah me! I hear an angry bell!
Ah me! I see a waving spear!

Is not that an angry snake?
Lo! he twists his writhing tail!
Hear the hisses he doth make!
See his yellow coat of mail.

Distant howls still louder grown,
Angry mutterings sounding near,
All proclaim with solemn tone,
Something dreadful coming here!

Lo! it comes, a vision grim!
Puffing forth black coils of smoke!
While amid these terrors dim
I listened, thus the monster spoke,
“Clear the line there! clear the rails!
‘Stop the engine! hold there! steady!
‘Stoker! hand me up those pails!
‘Euston station! tickets ready!
‘Tickets ready! tickets! tick—”
Thus it spoke, and thus I acted;
Left these scenes of terrors quick,
And rushed home like one distracted.

18.142 The Sailor's Wife

Source: *The Train*, April 1857 (with image and minor differences as noted);
Phantasmagoria (with minor differences as noted); *Three Sunsets*

See! There are tears upon her face—
Tears newly shed, and scarcely dried:
Close, in an agonised embrace,
She clasps the infant at her side.
Peace dwells in those soft-lidded eyes,
Those¹ parted lips that faintly smile—
Peace, the foretaste of Paradise,
In heart too young for care or guile.
No peace that mother's features wear;
But quivering lip, and knotted brow,
And broken mutterings, all declare
The fearful dream that haunts her now.
The storm-wind, rushing through the sky,
Wails from the depths of cloudy space;
Shrill, piercing as the seaman's cry
When death and he are face to face.

¹And

Familiar tones are in the gale:
 They ring upon her startled ear:
 And quick and low she pants the tale
 That tells of agony and fear:
 “Still that phantom-ship is nigh—
 With a vexed and life-like motion,
 All beneath an angry sky,
 Rocking on an angry ocean.
 “Round the straining mast and shrouds
 Throng the spirits of the storm:
 Darkly seen through driving clouds,
 Bends each gaunt and ghastly form.
 “See! The good ship yields at last!
 Dumbly yields, and fights no more;
 Driving, in the frantic blast,
 Headlong _{on}² the fatal shore.
 “Hark! I hear her battered side,
 With a low and sullen shock,
 Dashed, amid the foaming tide,
 Full upon a sunken rock.
 “His face shines out against the sky,
 Like a ghost, so cold and white;
 With a dead despairing eye
_{Gazing}³ through the gathered night.
 “Is he watching, through the dark
 Where a mocking ghostly hand
_{Points} a faint and feeble spark⁴
 Glimmering from the distant land?
 “Sees he, in _{this}⁵ hour of dread,
 Hearth and home and wife and child?
 Loved ones who, in summers fled,
 Clung to him and wept and smiled?
 “Reeling sinks the fated bark
 To her tomb beneath the wave:
 Must he perish in the dark—
 Not a hand stretched out to save?
 “See the spirits, how they crowd!
 Watching death with eyes that burn!
 Waves rush in——” she shrieks aloud,
 Ere her waking sense return.
 The storm is gone: the skies are clear:
 Hush’d is that bitter cry of pain:
 The only sound, that meets her ear,

18.143 Love among the Roses

Source: sent to Miss Sarah Sinclair, 1878

“Seek ye Love, ye fairy-sprites?
Ask where reddest roses blow.
Rosy fancies he invites,
And in roses he delights—
Have ye found him?” “No.”
“Seek again, and find the boy
In Childhood’s heart, so pure & clear.”
Now the fairies leap for joy,
Crying, “Love is here!”
“Love has found his proper nest,
And we guard him while he dozes
In a dream of peace & rest
Rosier than roses!”

Jan. 3, 1878.

Acrostic: Sarah Sinclair

18.144 La Guida di Bragia

Source: manuscript written for a Marionette Theatre, about 1850

Prologue

By Mr. B. Webster.

Scene: Green curtain at back—green floor—green paper sides.

Draw up P. curtain.

Shall soldiers tread the murderous path of war,
Without a notion what they do it for?
Shall pallid mercers drive a roaring trade,
And sell the stuffs their hands have never made?
And shall not we, in this our mimic scene,
Be all that better actors e'er have been?
Awake again a Kemble's tragic tone,
And make a Liston's humour all our own?
Or vie with Mrs. Siddons in the art
To rouse the feelings and to charm the heart?
While Shakespeare's self, with all his ancient fires,
Lights up the forms that tremble on our wires?
Why can't we have, in theatres ideal,
The good, without the evil, of the real?
Why may not Marionettes be just as good
As larger actors made of flesh and blood?
Presumptuous thought! to you and your applause
In humbler confidence we trust our cause.

Draw down P. curtain.

Act I, Scene 1

Scene: Black hangings—country scenery behind—green floor.

Present: Mooney and Spooney with lanterns.

Put out lights.

Draw up P. curtain, and change for W. light lamp.

MOONEY: Who's you?

SPOONEY: Why, me.

MOONEY: Nonsense, it can't be, what's your name?

SPOONEY: Oh, that's quite another question: I shan't tell.

MOONEY: Yet there is something familiar in those tones; something
which recalls to my memory visions of earlier and happier days.
Speak, speak! *have* you the mark of a grid-iron on the back of
your left wrist?

SPOONEY: No! certainly not; nothing of the sort!

MOONEY: Then you are my long-lost friend, my Spooney.

SPOONEY: My Mooney! (*They embrace.*)

SPOONEY: Ah! the joy of this meeting; this does indeed repay me for hours of 'owling, days of despair and nights of gnawing sorrow, for weeks of wailing and—I may add—for fortnights of frowning, and months of making faces; Mooney, I am happy! My friend!

MOONEY: My Spooney, there are moments—

SPOONEY: Yes, yes, Mooney! it's quite true! there are bolsters.

MOONEY: Nonsense, Spooney, how can you talk so? I said "moments"—let me proceed: there are moments, my dear friend, when I find it *impossible* to express my *'orrid feelings!*

SPOONEY: Yes, I feel it so, too! It's the same with me! There are moments when I find it *impossible* to press on my *orange peelings!*

MOONEY: Oh Spooney, Spooney, in the gravest and saddest moments, how can you thus intrude your absurd remarks? Be sensible, Spooney!

SPOONEY: Mooney, I will! Believe me, believe me, I will! Why do I meet you here? Have you left the king, that best and dearest of monarchs?

MOONEY: I have, my friend, yet not willingly. He dismissed me.

SPOONEY: And wherefore?

MOONEY: A mere pleasantry, an innocent joke, which a friend would have pardoned, and even he would have done so, if—Spooney, did you observe lately in our dear sovereign a marked, a decided alteration?

SPOONEY: I did, Mooney. I know what you allude to, his hair. Yes, Mooney, his hair became as white as—as—as white.

MOONEY: True, but I did not mean his hair: mark me.

SPOONEY: I will.

MOONEY: The king lost his luggage, as you are aware, Spooney.

SPOONEY: He did.

MOONEY: And with his luggage, Spooney, he lost—his temper!

SPOONEY: Woe's me! woe's me! are you *sure of it?*

MOONEY: Sartin; it happened thus: The king was sitting, surrounded by his courtiers, as usual, and was remarking in his own light way, "My clothes, my good friends, are not yet returned; they are all gone to the Wash." I, standing at a little distance, remarked in an undertone: "*And much they needed it.*" You know my habit, Spooney, of making amusing remarks?

SPOONEY: No, indeed, Mooney; you never made one yet in *my* recollection.

MOONEY: Well, sir, the king turned upon me and, in a voice a pig tied by the hind leg might have envied, said: "Traitor, begone! I renounce ye!"

SPOONEY: No! did he really? And did you go?

MOONEY: Didn't I just!

SPOONEY: Well I never! How very unfortunate! Do you know *I* was passing by the door at the moment and overheard your remark, and I thought it so good that I resolved to repeat it!

MOONEY: You weren't such an idiot as that, were you?

SPOONEY: I was, my dear Mooney, I assure you! I went in immedi-

ately after and said: "Your Majesty has lost your luggage, have you not?" "Yes," said the king, in accents of the deepest sadness, "I lost it all when—when I went to the Wash." "Did your Majesty go to the Wash?" I enquired. He answered, "I did." Whereupon I remarked with a smile, "*And much you needed it!*"

MOONEY: I never heard anything half as foolish! And what did the king say?

SPOONEY: Why, sir, he turned upon me and said in a voice—that a pig's hind leg might have envied, "Traitor, begone! I pronounce ye!"

MOONEY: Stuff! I don't believe a word of it!

SPOONEY: But I assure you he did, and I—went away immediately!

MOONEY: And since that day you have been, I suppose, adrift?

SPOONEY: Yes, my dear Mooney; but you, what have you been doing these many years?

MOONEY: Oh, I've been (*singing*)
Wandering through the wide world, seeking of my fortune;
But as I couldn't find it, I was forced to do without it.
And if you'll believe me, there was no one would receive me;
But as I never told you a lie, you've got no cause to doubt it.

SPOONEY: How particularly nicely you do sing, my dear Mooney! What kind of voice do you call yours?

MOONEY: Oh, don't you know, Spooney? Why it's an alto-soprano-mezzo-tinto-basso-relievo—

SPOONEY: No, but is it all that really?

MOONEY: As sure as you're standing there—

SPOONEY: Well, that's very curious, I shouldn't have thought it.

MOONEY: Well; but now, Mooney, we must devise some plan to make our living, and put an end to this "Wandering, *etc.*" (*As before*)

SPOONEY: Let me think awhile. (*Pause.*)

MOONEY: See, the morning breaks! (*Black scenes removed, lamp put behind; singing of birds.*)

SPOONEY: Mooney! I've an idea!

MOONEY: Have you really? In all the years, my Spooney, that we have been acquainted such an incident has *never* occurred before.

SPOONEY: The railway station near here has vacancies for station-master and for clerk. Let us apply for them. You'd better be station-master, as you're not so stupid as I am; you are more foolish than I, you know, my Mooney, but you're certainly not so stupid.

MOONEY: True, true, my dear friend. A very good idea, I'll go and apply at once. (*Exit.*)

SPOONEY (*soliloquises*): Poor Mooney! He's not much of a genius, but he means well! He is an honest fellow, and I'll do what I can for him! Yes, yes, he'll do best for station-master! He's more foolish than I am, but he's certainly not so stupid! Ha! here he comes! What success, my Mooney?

MOONEY: All right! we've got it. (*Singing.*)
Oh my eye, what jolly fun, only think what we've been and done.

They've made us railway horficers, and we've got a railway station!
 Day and night, and night and day, we'll do the work and call it play.
 When one's awake the other sleeps, in regular rotation!
 SPOONEY: Ebenezer Mooney-o, and Julius Caesar Spooney-o, they've made us railway horficers, and we've got a railway station.
 MOONEY: "Oh my eye, etc." (*As before.*)

Act I, Scene 2

Scene: Coloured paper carpet.

Present: Orlando and Sophonisba—the former with carpet bag.

Relight candles.

Draw up W. curtain, and change for G.

ORLANDO: My Sophonisba!

SOPHONISBA: My Orlando! (*Repeat.*)

ORLANDO: Time, my love, is flowing,

And I fear I must be going—

SOPHONISBA: Oh, no! You don't say so! (*Repeat three times, and vary.*)

ORLANDO: Yet surely we can't have been here so long?

SOPHONISBA: Oh, no, we can't! Your watch must be wrong!

ORLANDO: Our conversation has been so unimportant.

But my watch is right; it is going as it ought.

SOPHONISBA: Then it's not like you, for you're going as you oughtn't.

To go all the way to Birmingham for half-a-dozen of port!

ORLANDO: My beauty, it is my duty!

SOPHONISBA: But aren't you sorry to go?

ORLANDO: Oh, dear no!

Air: "There is no luck."

SOPHONISBA: What? Ain't you grieved to go, my dear!

My husband! Oh, for shame!

How can you go and leave me here?

You're very much to blame!

For I can't get on without you, love,

I can't get on at all!

That is, of course, you know, my love,

When you are out of call.

For puzzles come, and I've no skill,

I'm really such a dunce!

The butcher brings his little bill,

And must be paid at once!

For I can't get on, *etc.*

And visitors, too, come from town,

Whom *I've* got to receive.

With a patch of flour upon my gown

Parody on *Nae luck about the house* by William Julius Mickle or Jean Adams

And some treacle on my sleeve.
For I can't get on, *etc.*

'Twas but the other day a man,
When told to leave the door,
Went off—indeed, he almost ran.
I never saw him more.

I thought him a good riddance then,
But 'ere an hour was gone
I missed the forks—there should be ten—
And all the spoons but one!
For I can't get on, *etc.*

ORLANDO: Was I the only spoon you then possessed?

SOPHONISBA: No, dear! I missed you more than all the rest!
But now, my love, decide without delay,
What *will* you have for dinner, dear, to-day?

ORLANDO: Through feastings and banquetings though we should
hurry,

Be it ever so fiery, there's no dish like curry!
Curry! sweet curry! There's no dish like curry!

SOPHONISBA: Through larder and kitchen, I very much fear,
There is no curry-powder, though I search for a year.
Talk of curry-powder, there's nothing like it here!
What do you say to Irish stew?

Air: "Maidens of Zia."

ORLANDO: Not even Irish stew,
With salt and onions, too,
Will for your husband do
So well as mutton,
Roasted, roasted, roast leg of mutton!

Let it be nicely done.
I will be home at one.
Nothing is half such fun
As eating mutton,
Roasted, roasted, roast leg of mutton!

Let it be very hot,
Or else I'll eat it not,
All woes will be forgot
In eating mutton,
Roasted, roasted, roast leg of mutton!

You know, my love, I never wish
For any other dish,
So don't get any fish,
But only mutton,
Roasted, roasted, roast leg of mutton!

SOPHONISBA: Well, love, then roast mutton it shall be.

ORLANDO: So now, my love, good-bye.

Air: "Dulce Domum."

Parody on *Home,*
sweet home by Henry
Rowley Bishop

Parody on *Maidens*
of Zia from *Evenings*
in Greece by Thomas
Moore

Parody on *Dulce*
Domum by John
Reading

Fare thee well, and if for ever,
Then for ever fare thee well,
Sophonisba, Sophonisba!
Listen for the front door bell! (*Exit*)

Air: "Dih Conte."

SOPHONISBA: Fare thee well, my own Orlando,
My husband so blooming and fat,
And remember, oh, my dear one,
To take good care of your hat;
For it's new and tender,
And it cost you four bob and a bender.
Then don't sit down upon it, or
You'll squash it ever so flat!
Fare thee well, and if for ever,
Then for ever, fare thee well.
I'll expect you home to dinner, and
Be listening for the front-door bell.
Alas! how my duck will suffer
If he gets pitched into by the buffer,
Or if beneath the engine he
Gets squashed like a snail in its shell!

Draw down G. curtain.

Act II. Scene 1

Scene: Wall, and green paper sides. Two placards: "To Booking Office" and
"To Platform." Luggage.

Present: Mooney and Spooney, as before.

Draw up G. curtain, and change for W.

MOONEY: Here we are again.

SPOONEY: Here we are, Mooney.

MOONEY: Oh, that won't do at all; we must change our names, you
know.

SPOONEY: Well, then, *you* must think of new ones, for I'm sure I
can't; I—I—never was used to that kind of thing.

MOONEY: No more was I, my dear Spooney. What do you say to
Moggs and Spicer?

SPOONEY: Moggs and Spicer! Why, it's the very thing! That's a
singular coincidence! They're *exactly* the right names! So I'm to
call you Moggs?

MOONEY: Certainly, Spicer, you are.

SPOONEY: Ha, ha, to be sure, Moggs and Spicer!

MOONEY: But I say, Spicer!

SPOONEY: What!

MOONEY: Sich a norrid thing!

SPOONEY: Oh don't, don't, please! You frighten me! Are you in
joke?

MOONEY: In joke? Not I. Hark you, a word in your ear; sich a norrid thing!

SPOONEY: Oh, I say! Come, come! This is beyond a joke. Don't, there's a good fellow! I declare you have made me feel so bad!

MOONEY: Do you think I care what it makes you feel, I tell you, it's as true as day. One of the norridest things—

SPOONEY: Oh, what is it, Moggs, please! I shall faint if you don't tell me directly!

MOONEY: Why, we've got a duty here that I didn't know of!

SPOONEY: Oh, what is it, Moggs?

MOONEY: We've got to sing.

SPOONEY: Sing? When?

MOONEY: Why, always!

SPOONEY: What, always?

MOONEY: Yes, Spicer, all day long. We never ought to speak, we must sing all we have to say! (*A pause.*)

SPOONEY: Then I'll just tell you what it is, my dear Moggs. *I can't do it*, and that's all about it!

MOONEY: But you *must*, my dear Spicer, or else you'll lose your situation!

SPOONEY: Well if I must, I must.

MOONEY (*singing*): Now my dear Spicer,
 I'd have you to try, sir,
 To set all this platform to rights.
 Have the engine brought out,
 Push the luggage about,
 And see to the lanterns and lights.

SPOONEY: Yes, Mooney, I will, Mooney. Is that anything like singing?

MOONEY: Not the least atom, my dear Spicer; and remember, I'm Moggs, not Mooney!

SPOONEY: Oh, Moggs! To be sure, Moggs! Is that any better?

MOONEY: Rather worse, if anything, Spicer; but there's no difference worth speaking of.

SPOONEY: Oh dear, then I'm afraid I shall never do it!

Enter Kaffir.

MOONEY: Who are you, sir?

SPOONEY: Yes, sir, who are you, sir? It is Mr. Moggs that speaks to you, sir, and Mr. Moggs is a very talented man; you must answer him directly, sir. Is that more like singing, Mooney?

MOONEY: Moggs, Moggs, idiot!

SPOONEY: Oh, Moggs! Well I never shall remember—

MOONEY: But the man hasn't answered yet.

SPOONEY: No, more he has! Are you going to answer, sir?

KAFFIR: —

MOONEY: What's that, Spicer? I don't understand French.

SPOONEY: But it ain't French, it's German.

MOONEY: No, that I'll declare it isn't; it must be Dutch.

SPOONEY: I don't think it's that either; let's ask him. I say, old

feller, what language is that?
MOONEY: What a donkey you are, Spicer, he can't understand that, you must talk to him in his own language.
SPOONEY: How in the world am I to do that, Moggs, when I don't even know what it is?
MOONEY: Do as I tell you, sir, and don't be impertinent!
SPOONEY: Well, here goes, then:—
KAFFIR: —
MOONEY: Well, what did he say?
SPOONEY: Oh, he understood *me* well enough; the difficulty is, I can't understand *him*!
MOONEY: Stop a moment, I begin to recollect. It's our old friend Tamaha, etc. What a' stupid you are, Spicer, not to think of that before!
SPOONEY: No, no, Moggs, fair play if you please! You're the most stupid, you know.
MOONEY: *That* I'm not; you are, I'm sure!
SPOONEY: Oh, well, perhaps, but you're the most foolish at any rate, ain't you?
MOONEY: H'm! Don't you talk nonsense; leave me to deal with him, I understand the language.

Mooney and Kaffir converse. Exit Kaffir.

SPOONEY: What did he want?
MOONEY: He wanted the situation of stoker, *and I've given it him!*
SPOONEY: What? Without consulting me?
MOONEY: Without consulting you indeed! I should think so!
SPOONEY: Well, you know best, I suppose; but you certainly *are* the most foolish of the two.
MOONEY: No more of that! Spicer, why ain't you singing?
SPOONEY: Why should I?
MOONEY: It's so ordered by Bradshaw—
SPOONEY: Bother Bradshaw! You're not singing, either.
MOONEY: Why the fact is I don't choose, and I don't care for Bradshaw! (*Roar heard. Both start.*)
SPOONEY: What's that?
MOONEY: Don't know, I'm sure.
SPOONEY: Did you say you didn't care for Bradshaw?
MOONEY: I did.
SPOONEY: Why, no more do I! (*Roar.*) Oh, I say, don't let's talk any more about it, think of something else.
MOONEY: Well, what do you think of the weather?

Enter Mrs. Muddle.

MRS. MUDDLE: Which I never did see so ill-regulated a station. Railway horficers, indeed; I know what *I'd* do with sich horficers!
MOONEY: What do you want, my good woman?
MRS. MUDDLE: Why, here have I been waiting a good half-hour to get a docket, and there's no one to give it me!
SPOONEY: What *does* she mean, Moggs?

MOONEY: Oh, if it's a ticket you want, ma'am, I'll get you one in a moment—where to?

MRS. MUDDLE: Birmingham.

Exit Moggs.

MRS. MUDDLE: Now, young man, will you see to the luggridge and baggridge, if you please.

SPOONEY: Will you show me which is your luggage, ma'am?

MRS. MUDDLE: Why, it's all mine, himperence! What then?

SPOONEY: Oh, nothing, ma'am, it's all right here, the train won't be here yet.

Enter Moggs.

MOONEY: Here's your ticket, ma'am. Five and fourpence.

MRS. MUDDLE: There's your money, then. Now young man, attend. There's a little basket I left in the office, sir, which contains ... something imported.

MOONEY: *What*, ma'am?

MRS. MUDDLE: Never you mind *what* it is, himperence, it's something imported.

SPOONEY: Oh, Moggs, it's something smuggled! Don't have anything to do with it!

MOONEY: Nonsense, Spicer, she means important. Well, ma'am, do you wish to have it with you?

MRS. MUDDLE: No, himperence, I *don't* wish to have it with me. I wishes it to be sent.

(Pause.)

MOONEY: Sent how, ma'am?

MRS. MUDDLE: How dare you interrupt me, sir? I wishes it to be sent by the—by the Electric Diagrams—

MOONEY: Electric Telegraph, do you mean, ma'am?

MRS. MUDDLE: I should hope I did, sir!

SPOONEY: Oh, Moggs, she must be mad!

MOONEY: I'm sorry to say, ma'am, it can't go.

MRS. MUDDLE: Then I'll write to the nugepaper! As sure as my name's Muddle, I'll write to the nugepaper! *(Exit.)*

Draw down W. curtain.

Act II. Scene 2

Scene: Station.

Present: Mooney and Spooney.

Draw up W. curtain, and change for G.

MOONEY: Spicer, where's Mrs. Muddle?

SPOONEY: In the waiting room talking about Electric Diagrams.

MOONEY: Do you know, Spicer, what an awful thing I saw just now?

SPOONEY: No, what?

MOONEY: A Bradshaw's Railway Guide on legs stood visibly before me, and at the same moment heard a hollow voice.

SPOONEY: Oh, I say, how you terrify me!

MOONEY: Yes, sir, a hollow voice which said: “Mooney, why singst thou not. Spooney, why singst thou not? Spooney hath murdered singing. And, therefore, Mooney shall sing no more, Spooney shall sing no more.”

SPOONEY: Did it say any more?

MOONEY: Oh, ever such a lot more! It said:
 “Oh, I have passed a miserable day.
 Spooney sings worse than any man can say.”

SPOONEY: Any more?

MOONEY: Rather. It said:
 “Tunes, music, thorough—bass, lend me your ear,
 I came to see if Spooney sang: he didn’t!
 He doesn’t know a note or any tune,
 I never heard so shocking bad a singer!”

SPOONEY: Oh dear, this is past bearing! What impertinence!

MOONEY: Hush, don’t interrupt me.
 “When Spooney tried to sing, I really wept!
 I couldn’t bear it! It was agony!
 His listeners should be made of sterner stuff!
 Did this in Spooney look like knowing music?
 Yet Spooney thinks he knoweth how to sing.
 But Spooney he is very much mistaken!
 Each time he tried he always missed the note,
 Now sharp, now flat, but never natural,
 Yet Spooney thinks he knoweth how to sing,
 But Spooney he is very much mistaken!”

SPOONEY: But, Moggs, that’s not true! I *don’t* think I know how to sing, and I’d much rather not try!

MOONEY: The figure then said “Tell Spooney from me that he shall suffer for his doings and mis-doings.”

SPOONEY: Oh dear, oh dear! I never bargained for this when I took the situation; I’d rather be 100 miles off, a great deal!

MOONEY: Well, I can’t stay now, I hear somebody in the office.
(Exit.)

SPOONEY: Such an odd thing! To think of a book coming and talking Shakespeare like a human being—I never!
(Voice calling “Spicer! Spicer! come quick, I can’t manage him without help.”)

Exit Spooney.

Voices outside: “Oh I say—it’s no business of yourn!” “Hold your tongue!” “Hands off, villain!”

Enter Orlando, Mooney and Spooney.

Air “Come é Gentil—”

ORLANDO: He won’t give me the ticket, the brute, the brute.

MOONEY: I won’t give you the ticket, you cheat, you cheat!

SPOONEY: You see, sir, he considers it his duty, and therefore he won’t give you the ticket, because you won’t give him the money,

Parody on *Com’è
 Gentil* from *Don
 Pasquale* by Gaetano
 Donizetti

the money, the money!
ORLANDO: Then will you let me go as luggage, you brute, you brute!
MOONEY: I won't let you go as luggage, 'cos you ain't, 'cos you ain't!
SPOONEY: You see sir, you're a gentleman, and not a parcel, and so he won't let you go as luggage, because you ain't done up in brown paper, brown paper—
ORLANDO: Well then, I must go and get the money. See to my luggage—I'm going to Birmingham. (*Exit.*)

Whistle heard.

MOONEY: That's the Birmingham train: It's no use waiting for him:
Let it go.

Exit Spooney.

Whistle, etc., heard. Enter Spooney.

SPOONEY: Train's gone—

Enter Orlando.

SPOONEY: And all his luggage in it.
ORLANDO: Has the train gone, do you know?
MOONEY: Yes, sir, an hour ago.
ORLANDO: Bradshaw says half-past nine!
MOONEY: He has not rightly expressed it.
ORLANDO: Then I suppose I'm not in time?
MOONEY: Why you've exactly guessed it!
ORLANDO: That Bradshaw—
I only wish I had him here!
Just wouldn't I give it him? Oh no!
MOONEY: No, you wouldn't!
ORLANDO: And why not, I should like to know?
MOONEY: 'Cos you couldn't: He's half as big again as you,
You little feller!
He'd beat you black and brown and blue,
And green and yellor!
ORLANDO: Is my luggage gone, too?
SPOONEY: Just so, sir.
ORLANDO: Send a message by the Electric Telegraph directly; and I'll wait here.

Exit Mooney and Spooney.

Air: "Auld Lang Syne."

ORLANDO: Should all my luggage be forgot,
And never come to hand,
I'll never quit this fatal spot,
But perish where I stand.
But should it all come back again,
I'll say: "How glad I am!"
And I'll take a ticket by the train for Bir-ming-ham.
In every carriage there's a seat

Parody on *Auld Lang Syne* by Robert Burns

More cosy than the rest,
And when I've room to stretch my feet,
I always like it best.
Should such a lot be mine, I'll say:
"What a lucky dog I am!"
And joyfully I'll go my way to Bir-ming-ham.
Though wind be cold, and air be damp,
It cannot pierce my rug,
I'll read my book by the light of the lamp,
Wrapped up all tight and snug.
If I get there in time to sup,
I'll say: "How glad I am!"
And I'll proudly give my ticket up, at Bir-ming-ham.

Draw down G. curtain.

Act III. Scene 1

Scene: Station as before; no luggage.

Present: Moogs and Spicer.

Draw up G. curtain, and change for W.

SPOONEY: I quite agree with you, Moggs, we won't sing any more
in future.

MOONEY: That we won't! A fig for Bradshaw!

Roar heard.

SPOONEY: Oh, I say, Moggs, don't you mention his name again! I
am so frightened!

MOONEY: So am I, Spicer; my heart is troubled with fears of fu-
ture sorrow. Coming events, my dear Spicer, cast their shadows
before.

SPOONEY: Except at midday, you know, Moggs; shadows go the
other way after midday.

MOONEY: My poor Spicer! You have no soul for poetry, I see!

Enter Huntsman.

LOST: Where's the stationmaster? I want to go to London by the
9.45.

MOONEY: The 9:45, sir? That's gone rather more than half-an-hour
ago.

LOST: Oh dear, dear, how unlucky I am! When's the next train?

SPOONEY: The next train is 11.5.

LOST: Oh, that'll do! Give me a ticket for that!

MOONEY: But that train goes to Lincoln, sir.

LOST: Oh, never mind, never mind; I'm sure to miss it, so it don't
signify! Only give me a ticket.

MOONEY: Now, sir, just be advised by me: wait for the half-past
eleven train, which goes to London; there's a waiting room in
there. (*Exit Lost.*) (*Train heard approaching.*)

SPOONEY: What train is this, Mooney?

MOONEY: Moggs, if you please. This will be the Birmingham train.
(Whistle heard.) Where's that old woman, I wonder? She'll be late after all.

SPOONEY: I'll run and fetch her. *(Exit, and returns with Mrs. Muddle.)*

MOONEY: Now, mum, look sharp, if you please. Here's your train coming. Is all this your luggage?

MRS. MUDDLE: Yes, sir, it be; but it's not the luggridge I cares for, no, nor the baggridge neither. Young man.

MOONEY: Madam.

MRS. MUDDLE: I wishes you to—to—to ensnare my life!

SPOONEY: Oh, Moggs, hold me up a moment, I am took so bad!

MRS. MUDDLE: Now himperence, what are you a-grumbling about? Are you going to ensnare my life, or not?

MOONEY: Ensnare your life, ma'am!

MRS. MUDDLE: Yes, sir! What with all these collections and accidings as is so perpetually 'appening, I daren't go without you do!

SPOONEY: We couldn't do it, really, mum. I don't know what the consequences would be! Don't consent, Moggs!

MOONEY: I haven't a notion what she means! No, ma'am, we can't do it on any considerations!

MRS. MUDDLE: Then, young men, mark my words! If any of them collections happens, or the steam Indian blows up, or I get run over and killed in one of your funnels, which I never could see the sense of yet, and they never light 'em up, mark my words, it'll be manslaughter! And if it *be*, which I'm mortally certain it will, I'll write to the nugepaper! There!

SPOONEY: But, my dear madam, it can't be manslaughter, in any case. It will only be woman-slaughter.

MRS. MUDDLE: Well, and what then, you young Spooney, ain't that just as bad?

SPOONEY: How does she know my name?

MOONEY: She doesn't; don't betray yourself!

MRS. MUDDLE: No, I don't know your name, nor I don't want to; your face is bad enough, in all conscience!

Whistle heard. Lost rushes across back of stage.

MOONEY: Run and stop the train, Spicer, and see what that gentleman is after. *(Exit Spicer.)* Really, madam, you shouldn't go by the railway alone; why haven't you somebody with you?

MRS. MUDDLE: Because I'm suffidgent by myself, himperence! My missis was a sayin' to me only this mornin', says she: "Mrs. Muddle," says she, "won't you have someone with you?" "No, mum," says I, "I won't; I knows all about the docketts, and the collections, and the steam Indians," says I, "and I knows the himperence of the railway horficers," I says, "and I can manage it all, and when I gets to the station I wants to get out at," says I, "why, I'll just nudge the conductor with the pint of my rumberoller!"

MOONEY: My good woman, you are under some mistake. A railway train is not a bus!

MRS. MUDDLE: Oh, it ain't, ain't it, sir? Then what does it go and conduct itself as a bus for, I'd like to know?

MOONEY: I don't understand you, ma'am—

MRS. MUDDLE: Why, one of them steam Indians went and bust only last seek, at least so my neege Eliza telled me.

MOONEY: Bust? Madam, what in the world do you mean?

MRS. MUDDLE: Well, it *did* bust; don't you go for to denige it, himperence! And now, sir, are you going to ensnare my life for me, or not?

Enter Spicer and Mr. Lost.

LOST: Oh, whatever will become of me, I'm sure I don't know!

SPOONEY: Here's this gentleman was a-running like mad into the wrong train.

LOST: And so I ought to, oughtn't I? It was just on the point of starting.

MRS. MUDDLE: Just going, is it? and I haven't got my life ensnared yet! Oh, you villains!

Exit Mrs. Muddle. Whistle and train heard going.

Enter Mrs. Muddle.

MRS. MUDDLE: There now! there's the train gone, and all my luggridge in it!

LOST: Gone! Then it's all up!

SPOONEY: No, sir, that was the down train.

MRS. MUDDLE: Well, young men, I'll write to the nugepaper immediate, and what'll it'll do, I'm sure I can't tell, but I 'ope it'll give you six months in the treadmill, or else hard labour at the gallows! Mark my words—I says to you, says I, "See to the luggridge and baggridge"—that were the depression I made use of—and you've been and sent it off without me!

MOONEY: But, my dear madam, you shall go by the next train—won't *that* do?

MRS. MUDDLE: No, sir, it will *not* do!

MOONEY: What do you want then?

MRS. MUDDLE: Well, I'll say nothing' more about it, so long as you'll send me by the—the electric Diagrams.

Mooney, Spooney and Lost rush out.

MRS. MUDDLE: (*Singing. Air: "Norma."*)

Oh, dear! Whatever am I to do?

Dear, whatever am I to do?

Here's all my luggridge is gone,

I haven't the least idea where to!

There was three trunks and an oblong box

And none of them had got any locks;

And they'll be robbed on the way, as sure

As my name is Muddle, they will.

Oh, dear! Whatever am I to do?

Parody on *Casta Diva* from *Norma* by Vincenzo Bellini

Draw down W. Curtain.

Act III. Scene 2

Scene: Coloured paper—carpet.

Present: Sophonisba.

Draw up W. curtain.

SOPHONISBA: Ah, how my heart beats with fear!
Would that my beloved husband were here!
I wish he wasn't quite so late!
The dinner'll be spoilt as sure as fate!

Air: "Non Piu Mesta."

Is the mutton roasting, Sarah Jane?
And are the potatoes boiled?
If we have to send them out again
The dinner-party will be spoiled!

Parody on *Non Piu Mesta* from *La Cenerentola* by Gioachino Rossini

Enter Sarah Jane.

COOK: Why, I'm sorry to say, mum, the meat took a jump.
And into the ashes did rush;
But I've bin and I've scrubbed it under the pump,
With soap and a blacking-brush!
And the taties, mum, they was bilin' so well,
When just as turned my back,
A whole lot of soot down the chimbley fell,
And now they're as black as black!

SOPHONISBA: You don't say so! Is it *quite* spoilt?

COOK: *Quite*, mum! It'll only do for me and perliceman to 'ave for supper this night.

SOPHONISBA: Then what are we to have for dinner?

COOK: Oh, mum, I'll run you up some little thing in a jiffey! What d'you say to Irish stew?

SOPHONISBA: Irish stew, cook? The very thing!

COOK: Why, I thought as much, mum, so I've just done some; it's down to the fire now! (*Exit.*)

Enter Orlando.

ORLANDO: Dinner ready, my dear?

SOPHONISBA: Very nearly, I believe, love—

ORLANDO: What, the roast leg of mutton? That's right!

That roast leg of mutton, of mutton, of mutton,
That roast leg of mutton I've thought of all day.

So let us get at it, get at it, get at it,
So let us get at it without more delay!

SOPHONISBA: Why, the fact is, dear, it's not—

ORLANDO: Not hot mutton!

SOPHONISBA: No, my love, don't be angry.

Air: "La ci darem."

ORLANDO: I don't like cold mutton.

Parody on *Là ci darem la mano* from *Don Giovanni* by Wolfgang Amadeus Mozart

SOPHONISBA: I know that as well as you.
 ORLANDO: But whatever it is, I don't care a button!
 SOPHONISBA: Why, my dear love, it's Irish stew!
 ORLANDO: Then what has become of the joint?
 SOPHONISBA: That doesn't matter to you!
 ORLANDO: Where is it?
 SOPHONISBA: That's nothing to the point,
 For we're to dine on Irish stew.
 ORLANDO: Then since it must be so, must be so, must be so,
 Into the dining room let us go, let us go.
 Come with me—
 SOPHONISBA: I agree. (*Exeunt both.*)

A short pause.

Enter both by other door.

SOPHONISBA: Now, my love, that we have dined,
 Tell me, if you feel inclined,
 How you travelled and got on.
 ORLANDO: All my luggage, dear, is gone!
 I've been the sport of cruel fate,
 For every train I was too late!
 It's all along of Bradshaw!

Air: "Long, long ago."

When I arrived at the sta-ti-on
 Long, long ago, *etc.*
 I found that the train which I wanted was gone,
 Long, long ago, *etc.*
 The train-time in Bradshaw was printed all wrong,
 And that is the reason that I've been so long,
 And I only wish he had gone to Hong-Kong,
 Long, long ago, *etc.*

Parody on *Long, Long ago* by Thomas Haynes Bayly

Air: "Go, forget me."

SOPHONISBA: Oh! forget it. Why should Bradshaw
 O'er that brow a shadow cast?
 Let us think no more about it,
 Since you have got home at last.
 ORLANDO: Home? But where 's the roasted mutton?
 And I've got no clothes to put on;
 May that Guide of Bradshaws be
 Put behind the fire by me!

Parody on *Go Forget Me Why Should Sorrow* by William Clifton

Air: "Paloma"

ORLANDO: That Bradshaw, I wish he'd caught it as he ought; that
 Bradshaw's Railway Guide—"That Bradshaw!" *etc.*
 SOPHONISBA: *Ditto, as above.*

Parody on *La Paloma* by Sebastián de Yradier

Enter Bradshaw.

ORLANDO: Oh horror!

Enter all.

BRADSHAW: "Enter my minions all and hear my words:
I made a rule my servants were to sing.
That rule they disobeyed, and in revenge
I altered all the train-times in my book,
And made the world go wrong, what then? 'twas just;
And ever thus shall virtue be rewarded,
And vice be punished, ye that hear me now,
Say, do not I speak truly; let applause
Be ours if now our conduct be commended;
But hisses, groans, and howlings as of beasts,
If we have failed your hopes to satisfy!"

Draw down W. curtain.

Epilogue

By Mr. Flexmore

*Scene: Green curtain at back—green floor—green paper sides.
Draw up W. curtain, and change for P.*

Air: "Admiral."

How gallantly, how merrily, we've spent our time to-day!
The audience are delighted, delighted with our play,
Or so at least they seem to be, by making such a noise,
The cause for which, I fancy, is, there are so many boys!
Both strangers and relations, we thank you, one and all,
We asked you for your plaudits and you answered to our call,
Pit, gallery (if such there be) and stalls, and private boxes,
Spectators all of many names, especially Wilcoxes!
I hope you've all been satisfied with music, sound, and sight,
And now I think it's fully time to wish you all good-night.
I've but two words to say to you, so patient as you've been,
Which are "Good health to each one here," "Long live our gracious
Queen!"

Draw down P. curtain.
NATIONAL ANTHEM.

18.145 She's all my Fancy Painted Him

Source: The Comic Times, September 8, 1855; Mischmasch (as newspaper cutting)
Parody on *Alice Gray* by William Mee

Other version:
→ 18.175, p. 2386

[This affecting fragment was found in MS., among the papers of the well-known author of "Was it You or I?" a tragedy, and the two popular novels "Sister and Son," and "The Niece's Legacy, or the Grateful Grandfather."]

She's all my fancy painted him
 (I make no idle boast);
If he or you had lost a limb,
 Which would have suffered most?
He said that you had been to her,
 And seen me here before;
But, in another character,
 She was the same of yore.
There was not one that spoke to us,
 Of all that thronged the street:
So he sadly got into a 'bus,
 And pattered with his feet.
They sent him word I had not gone
 (We know it to be true);
If she should push the matter on,
 What would become of you?
They gave her one, the gave me two,
 They gave us three or more;
They all returned from him to you,
 Though they were mine before.
If I or she should chance to be
 Involved in this affair,
He trusts to you to set them free,
 Exactly as we were.
It seemed to me that you had been
 (Before she had this fit)
An obstacle, that came between
 Him, and ourselves, and it.
Don't let him know she liked them best,
 For this must ever be
A secret, kept from all the rest,
 Between yourself and me.

18.146 Brother and Sister

Source: Useful and Instructive Poetry

“Sister, sister, go to bed!
Go and rest your weary head.”
Thus the prudent brother said.

“Do you want a battered hide,
Or scratches to your face applied?”
Thus his sister calm replied.

“Sister, do not raise my wrath.
I’d make you into mutton broth
As easily as kill a moth!”

The sister raised her beaming eye
And looked on him indignantly
And sternly answered, “Only try!”

Off to the cook he quickly ran.
“Dear Cook, please lend a frying-pan
To me as quickly as you can.”

“And wherefore should I lend it you?”
“The reason, Cook, is plain to view.
I wish to make an Irish stew.”

“What meat is in that stew to go?”
“My sister’ll be the contents!” “Oh!”
“You’ll lend the pan to me, Cook?” “No!”

Moral: Never stew your sister.

18.147 Clara

Source: Useful and Instructive Poetry

Solemnly sighing
Like one a-dying,
The countess Clara on her pillow lay:
Along the pillow white,
Through the drear, drear, night
Her golden ringlets thickly cluster,
“Woe’s me, woe’s me!”
Thus did she sadly say,
“My punishment is just, what can be juster?
Yet am I wretched and in misery.
Why hath he left me here alone?
Why doth he thus delay his coming?
I hear no sound but the fitful drone
Of the beetle idly humming.
I live in woe and hopeless love,
And gaze on the lovely moon above.
The yellow moon, the yellow moon!
She looketh down aloft,
And through the dark and murky night
She sends her whispers soft.

With rays of light through the murky night
She makes the dark as noon,
Oh! would I were a screech owl now,
To woo the yellow moon!

Through distant lands of pleasantness
A region of despair
I wander on in weariness
And madly tear my hair.
Is it not so? Do not I hear his voice
Ah me! My heart, rejoice!
Woe, woe, woe, woe!
My brain it reels, my heart is all on fire,
As curls the smoke from yonder village spire!”
Alas, oh! no!
Sudden she hears a thundring charger’s stamp
She hears a horseman tramp
She hears a vacant tone
Still wild and wilder grown
“Ha! ha! ha! ha!
Some beer there, ho!
Who said so? hey?
Answer you baseborn churl!
One, two, three, four,
I took you for a door,

But still you are an earl!
 Stay!
 Fetch me the bottle, 'tis not empty yet!
 What? Will you fret?
 I didn't do it, no!
 I'll bet you two to three I win—
 What's that?
 Fish up that fish without a fin—
 Fetch me my walking stick and hat—
 Who trod upon the collar of my coat?
 I do not care a groat.
 Fill, fill the cup—
 Let's have a sup!
 Have not I rid the livelong night?
 Dear me! I cannot stand upright!"
 At the sound of his voice, and at his tone,
 The Lady Clara gave a moan,
 Thus said she, "Oh!
 Oh! what a go!
 What did he say? I did not understand.
 The gaiety, the sadness of the land
 Through bounding binnocks ever flows
 Like the red rose!
 The smoke it curls, the chimney topples near!
 The stars all quake for fear!
 Ah me! I make my troublous moan,
 But he is wild and wilder grown,
 His wrath is hot,
 Oh! is it not?
 "I shriek with agony's attack,
 I scream with sudden pain,
 I would I were a maniac!
 I would I were insane!"
 Through the dim darkness of the night,
 She saw a vision bright,
 An aged, hoary monk,
 Thus he the silence broke,
 And thus he spoke,
 Extending forth his shrivelled hand,
 It seemed a mountain, dimly grand,
 That did before the Lady stand.
 "Weep not for him, Lady fair!
 Tear not off thy golden hair!
 Do not scream, and do not faint,
 Utter not thy loud complaint,
 He's only swallowed too much beer,
 He'll not come to any harm,
 Don't waste time in useless fear,
 And indulge not in alarm!

Go down and let thy guilty husband in.”
Thus spake the monk,
“He’s only been a drinking too much gin,
And got dead drunk!”
Moral: “Woo the yellow moon.”

18.148 **Something fails**

Source: from a letter to Edith Blakemore, February 1, 1881

Something fails—
Perhaps the gales—
Still, there *are* scales
On the rails,
Packed in bales
With the mails,
Coming to a writer who regales
Little friends of his with fairy-tales.

18.149 Speak Roughly to Your Little Boy

Source: Alice's Adventures in Wonderland (extracted, connected)
Parody on *Speak Gently* by David Bates

Speak roughly to your little boy,
And beat him when he sneezes:
He only does it to annoy,
Because he knows it teases.

Wow! wow! wow!

I speak severely to my boy,
I beat him when he sneezes;
For he can thoroughly enjoy
The pepper when he pleases!

Wow! wow! wow!

18.150 Tell me truly, Maidens three

Source: from a letter to Harriet, Mary and Georgina Watson in 1870

Tell me truly, Maidens three,
Where can all these wonders be?
Where tooth of lion, eye of ox,
And foot of cat and tail of fox,
With ear of mouse and tongue of hound }
And beard of goat, together bound }
With hair of Maiden, strew the ground. }

Solution: *Taraxacum officinale* (dandelion), *Leucanthemum vulgare* (oxeye-daisy),
Antennaria dioica (catsfoot), *Alopecurus* (foxtail grass), *Cerastium fontanum*
(common mouse-ear), *Cynoglossum officinale* (houndstongue), *Aruncus dioicus*
(goatsbeard), *Adiantum* (Maidenhair fern)

18.151 Double Acrostic (Kerr)

Source: sent to Mabel and Emily Kerr, May 20, 1871

[Addressed to two young ladies in Canada, whose photograph I had seen & admired: on hearing of this they had sent me a copy. Their names form the two upright words, but there is no stanza to embody them.]

Thanks, thanks, fair Cousins, for your gift
So swiftly borne to Albion's isle—
Though angry waves their crests uplift
Between our shores, for many a league!
("So far, so good," you say: "but how
Your Cousins?" Let me tell you, Madam.
We're both descended, you'll allow,
From one great-great-great-grandsire, Noah.)
Your picture shall adorn the book
That's bound, so neatly and moroccoly,
With that bright green which every cook
Delights to see in beds of cauliflower.
The carte is very good, but pray
Send me the larger one as well!
"A cool request!" I hear you say.
"Give him an inch, he takes an acre!
"But we'll be generous, because
We well remember, in the story,
How good and gentle Alice was,
The day she argued with the Parrot!"

Solution: mile, Adam, broccoli, ell, lory: Mabel, Emily

18.152 Four Riddles. No. III

Source: Rhyme? and Reason?

The introduction has been moved here.

The original manuscript (titled "A Charade", introduced "Dedicated, without permission, to Miss Marion Terry", with stanzas numbered and labelled, the minor difference "falling day" instead of "fading day", and signature "Lewis Carroll. Jan. 23. 1879") can be found as scan in *Magic of Lewis Carroll*, p. 129

No. III. was written after seeing Miss Marion Terry perform in Mr. Gilbert's play of "Pygmalion and Galatea." The three stanzas respectively describe "My First," "My Second," and "My Whole."

The air is bright with hues of light
And rich with laughter and with singing:
Young hearts beat high in ecstasy,
And banners wave, and bells are ringing:
But silence falls with fading day,
And there's an end to mirth and play.
Ah, well-a-day!

Rest your old bones, ye wrinkled crones!
The kettle sings, the firelight dances.
Deep be it quaffed, the magic draught
That fills the soul with golden fancies!
For Youth and Pleasance will not stay,
And ye are withered, worn, and gray.
Ah, well-a-day!

O fair cold face! O form of grace,
For human passion madly yearning!
O weary air of dumb despair,
From marble won, to marble turning!
"Leave us not thus!" we fondly pray.
"We cannot let thee pass away!"
Ah, well-a-day!

Solution: gala, tea: Galatea

18.153 Lays of Sorrow. No. 1

Source: The Rectory Umbrella

The day was wet, the rain fell souse
Like jars of stawberry jam,¹ a
Sound was heard in the old henhouse,
A beating of a hammer.
Of stalwart form, and visage warm,
Two youths were seen within it,
Splitting up an old tree into perches for their poultry

¹i. e. the jam without the jars: observe the beauty of this rhyme.

At a hundred strokes² a minute.

The work is done, the hen has taken
Possession of her nest and eggs,
Without a thought of eggs and bacon,³
(Or I am very much mistaken:)

She turns over each shell,
To be sure that all's well,
Looks into the straw
To see there's no flaw,
Goes once round the house,⁴
Half afraid of a mouse,
Then sinks calmly to rest
On the top of her nest,

First doubling up each of her legs.

Time rolled away, and so did each shell,

"Small by degree and beautifully less,"

As the sage mother weth a powerful spell⁵

Forced each in turn it's contents to "express,"⁶

But ah! "imperfect is expression,"

Some poet said, I don't care who,

If you want to know you must go elsewhere,

One fact I can tell, if you're willing to hear,

He never attended a Parliament Session,

For I'm certain that if he had ever been there,

Full quickly would he have changed his ideas,

With the hissings, the hootings, the groans and the cheers.

And as to his name it is pretty clear

That it wasn't me and it wasn't you!

And so it fell upon a day,

(That is, it never rose again.)

A chick was found upon the hay,

It's little life had ebbed away.

No longer frolicsome and gay,

No longer could it run or play.

"And must we, chicken, must we part?"

It's master⁷ cried with bursting heart,

And voice of agony and pain

So one, whose ticket's marked "Return⁸".

When to the lonely roadside station

He flies in fear and perturbation.

Thinks of his home—the hissing urn—

Then runs with flying hat and hair,

Quoted from *Henry and Emma* by Matthew Prior (commonly misquoted)

Quoted from a folk song

²at the rate of a stroke and two thirds in a second.

³unless the hen was a poacher, which is unlikely.

⁴the hen-house.

⁵beak and claw.

⁶press out.

⁷probably one of the two stalwart youths.

⁸the system of return tickets is an excellent one. People are conveyed, on particular days, there and back again for one fare.

And, entering, finds to his despair
He's missed the very latest train!⁹
Too long it were to tell of each conjecture,
Of chicken suicide, and poultry victim,
The deadly frown, the stern and dreary lecture,
The timid guess, "perhaps some needle pricked him!"
The din of voice, the words both loud and many,
The sob, the tear, the sigh that none could smother,
Till all agreed "a shilling to a penny
"It killed it self, and we acquit the mother!"
Scarce was the verdict spoken,
When that still calm was broken,
A childish from hath burst into the throny,
With tears and looks of sadness,
That bring no news of gladness,
But tell too surely something hath gone wrong!
"The sight that I have come upon
"The stoutest¹⁰ heart would sicken,
"That nasty hen has been and gone
"And, killed another chicken!"

⁹an additional vexation would be that his "Return" ticket would be no use the next day.
¹⁰perhaps even the "bursting" heart of its master.

18.154 The Juvenile Jenkins

Source: Useful and Instructive Poetry

The juvenile Jenkins was jumping with joy,
As he sported him over the sandy lea;
In his small fat hand there was many a toy
And many a cake in his mouth had he.

But the juvenile Jenkins he heard a voice
Which made him with horror thrill through and through,
“Come into the house, don’t make any noise,
For I have got a parcel for you!”

The juvenile Jenkins he entered the door,
And, lo, on the table the parcel lay,
He wiped his feet on the mat on the floor,
While his mother reluctantly did say,

“Perhaps it may be a sock or a mitten:”
He covered her face with his kisses soft,
As he read the directions upon it written,
“The juvenile Jenkins.”

Moral: “A present from Croft.”

18.155 A Fable

Source: Useful and Instructive Poetry

The Khalif Emir sat upon his throne,
He ravaged all the land till he was left alone.
The Brahmin Mufti came his throne before,
He told a tale all full of learned lore;
“An ancient owl he sat upon a tree,
A younger owl, and he would married be,
He asked him for a boon and dowry fair,
Since he to all his property was heir.
He said, ‘My son, I have it not to give
But if one year our khalif he should live,
I’ll give you, dearest duck, as sure as fate
One hundred farms all waste and desolate.’”
He ceased his tale: he gazed upon his face,
He saw his tears come trickling down apace,
He thought upon it for an hour or more,
He did what he had never done before,
He changed his conduct, he the people bless’d
(No more he made them weep)
And the land was steeped in happiness
(Full eighteen inches deep.)
Moral: “Change your conduct.”

18.156 The Lang Coortin'

Source: The College Rhymes, November 1862 (without images, with signature "R. W. G." and minor differences as noted); Phantasmagoria (without images, with minor differences as noted); Rhyme? and Reason?

The lady she stood at her lattice high,
Wi' her doggie at her feet;
Thorough the lattice she can spy
The passers in the street.

"There's one that standeth at the door,
And tirlleth at the pin:
Now speak and say, my popinjay,¹²
If I sall let him in."

Then up and spake the popinjay
That flew abune her head:
"Gae let him in that tirls the pin:
He cometh thee to wed."

O when he cam' the parlour in,

¹*Popinjay*. This bird appears to have been a regular domestic institution with our forefathers (see the 'Minstrelsy of the Border'), and to have volunteered advice and moral reflections on all possible occasions—much after the fashion of the Chorus in Greek Tragedy.

²Footnote doesn't appear in *Rhyme? and Reason?*, in *College Rhymes* it says "... forefathers, according to the early English Ballads, and to ... after the manner of the ..."

A woeful man was he!
 “And dinna ye ken your lover agen,
 Sae well that loveth thee?”
 “And how wad I ken ye loved me, Sir,
 That have been sae lang away?
 And how wad I ken ye loved me, Sir?
 Ye never telled me sae.”
 Said—“Ladye dear,” and the salt, salt tear
 Cam’ rinnin’ doon his cheek,
 “I have sent thee tokens of my love
 This many and many a week.
 “O didna ye get the rings, Ladye,
 The rings o’ the gowd sae fine?
 I lwot³ that I have sent to thee
 Four score, four score and nine.”
 “They cam’ to me,” said that fair ladye.
 “Wow, they were flimsie things!”
 Said—“that chain o’ gowd, my doggie to lhowd,⁴
 It is made o’ thae self-same rings.”
 “And didna ye get the locks, the locks,
 The locks o’ my ain black hair,
 Whilk I sent by post, whilk I sent by box,
 Whilk I sent by the carrier?”
 “They cam’ to me,” said that fair ladye;
 “And I pritheer send nae mair!”
 Said—“that cushion sae red, for my doggie’s head,
 It is stuffed wi’ thae locks o’ hair.”
 “And didna ye get the letter, Ladye,
 Tied wi’ a silken string,
 Whilk I sent to thee frae the far countrie,
 A message of love to bring?”
 “It cam’ to me frae the far countrie
 Wi’ its silken string and a’;
 But it wasna prepaid,” said that high-born maid,
 “Sae I gar’d them tak’ it awa’.”
 “O ever alack that ye sent it back,
 It was written sae clerkly and well!
 Now the message it brought, and the boon that it sought,
 I must even say it mysel’.”
 Then up and spake the popinjay,
 Sae wisely counselled he.
 “Now say it in the proper way:
 Gae doon upon thy kneel!”
 The lover he turned baith red and pale,

³wist

⁴houd

̀Went⁵ doon upon his knee:
 “O Ladye, hear the waesome tale
 ̀That must be told⁶ to thee!
 “For five lang years, and five lang years,
 I coorted thee by looks;
 By nods and winks, by smiles and tears,
 As I had read in books.
 “For ten lang years, O weary hours!
 I coorted thee by signs;
 By sending game, by sending flowers,
 By sending Valentines.
 “For five lang years, and five lang years,
 I have dwelt in the far countrie,
 ̀Till that thy mind should be inclined⁷
 Mair tenderly to me.
 “Now thirty years are gane and past,
 I am come frae a foreign land:
 I am come to tell thee my love at last—
 O Ladye, gie me thy hand!”
 The ladye she turned not pale nor red,
 But she smiled a pitiful smile:
 “Sic’ a coortin’ as yours, my man,” she said
 “Takes a lang and a weary while!”
 And out and laughed the popinjay,
 A laugh of bitter scorn:
 “A coortin’ done in sic’ a way,
 It ought not to be borne!”
 Wi’ that the doggie barked aloud,
 And up and doon he ran,
 And tugged and strained his chain o’ gowd,
 All for to bite the man.
 “O hush thee, gentle popinjay!
 O hush thee, doggie dear!
 There is a ̀word⁸ I fain wad say,
 It needeth he should hear!”
 Aye louder screamed that ladye fair
 To ̀drown⁹ her doggie’s bark:
 Ever the lover shouted mair
 To make that ladye hark:
 Shrill and more shrill the popinjay
 ̀Upraised¹⁰ his angry squall:

⁵Gaed

⁶I have to tell

⁷In hopes thy mind might be inclined

⁸thing

⁹still

¹⁰Kept up

“And out and laughed the popinjay”

I trow the doggie's voice that day
 Was louder than them all!
 The serving-men and serving-maids
 Sat by the kitchen fire:
 They heard sic' a din the parlour within
 As made them much admire.

“O hush thee, gentle popinjay!”

Out spake the boy in buttons
 (I ween he wasna thin),
 “Now wha will tae the parlour gae,
 And stay this deadlie din?”
 And they have taen a kerchief,
 Casted their *kevils*¹¹¹² in,

¹¹ *Kevils*, lots. A method of deciding on a course of action, which was probably most popular with those who could not afford to keep a popinjay.

¹²Footnote doesn't appear in *Rhyme? and Reson?*, in *College Rhymes* it says “. . . which appears to have been chiefly in favour with those . . .”

For wha should tae the parlour gae,
 And stay that deadlie din.
 When on that boy the kevil fell
 To stay the fearsome noise,
 “Gae in,” they cried, “whate’er betide,
 Thou prince of button-boys!”
 Syne, he has taen a supple cane
 To _ˌswinge¹³ that dog sae fat:
 The doggie yowled, the doggie howled
 The louder aye for that.
 Syne, he has taen a mutton-bane—
 The doggie _ˌceased¹⁴ his noise,
 And followed doon the kitchen stair
 That prince of button-boys!
 Then sadly spake that ladye fair,
 Wi’ a frown upon her brow:
 “O dearer to me is my sma’ doggie
 Than a dozen sic’ as thou!
 “Nae use, nae use for sighs and tears:
 Nae use at all to fret:
 Sin’ ye’ve bided sae well for thirty years,
 Ye may bide a wee langer yet!”
 Sadly, sadly he crossed the floor
 And tirléd at the pin:
 Sadly _ˌwent¹⁵ he through the door
 Where sadly he cam’ in.
 “O gin I had a popinjay
 To fly abune my head,
 To tell me what I ought to say,
 I had by _ˌthis¹⁶ been wed.
 “O gin I find anither ladye,”
 He said _ˌwi¹⁷ sighs and tears,
 “I _ˌwot¹⁸ my coortin’ sall not be
 Anither thirty years:
 “For gin I find a ladye gay,
 Exactly to my taste,
 I’ll pop the question, aye or nay,
 In twenty years at maist.”

¹³beat

¹⁴hushed

¹⁵gaed

“The doggie ceased his noise”

18.157 Stolen Waters

Source: The College Rhymes, June 1862 (with minor differences as noted);
Phantasmagoria (with minor differences as noted); Three Sunsets

The light was faint, and soft¹ the air
That breathed around the place;
And she was lithe, and tall, and fair,
And with a wayward grace
Her queenly head she bare.

With glowing cheek, with gleaming eye,
She met me on the way:
My spirit owned the witchery
Within her smile that lay:
I followed her, I knew not why.

The trees were thick with many a fruit,
The grass with many a flower:
My soul was dead, my tongue was mute,
In that accursèd hour.

And, in my dream, with silvery voice,
She said, or seemed to say,
“Youth is the season to rejoice—”
I could not choose but stay:
I could not say her nay.

She plucked a branch above her head,
With rarest fruitage laden:
“Drink of the juice, Sir Knight,” she said:
“’Tis good for knight and maiden.”

Oh, blind mine eye that would not trace—
Oh,² deaf mine ear that would not heed—
The mocking smile upon her face,
The mocking voice of greed!

I drank the juice; and straightway felt
A fire within my brain:
My soul within me seemed to melt
In sweet delirious pain.

“Sweet is the stolen draught,” she said:
“Hath sweetness stint or measure?
Pleasant the secret hoard of bread:
What bars us from our pleasure?”

“Yea, take we pleasure while we may,”
I heard myself replying.
In the red sunset, far away,
My happier life was dying:

¹“warm” in *College Rhymes*

²And

My heart was sad, my voice was gay.
 And unawares, I knew not how,
 I kissed her dainty finger-tips,
 I kissed her on the lily brow,
 I kissed her on the false, false lips—
 That burning kiss, I feel it now!
 “True love gives true love of the best:
 Then take,” I cried, “my heart to thee!”
 The very heart from out my breast
 I plucked, I gave it willingly:
 Her very heart she gave to me—
 Then died the glory from the west.
 In the gray light I saw her face,
 And it was withered, old, and gray;³
 The flowers were fading in their place,⁴
 Were fading with the fading day.
 Forth from her, like a hunted deer,
 Through all that ghastly night I fled,
 And still behind me seemed to hear
 Her fierce unflagging tread;
 And scarce drew breath for fear.
 Yet marked I well how strangely seemed
 The heart within my breast to sleep:
 Silent it lay, or so I dreamed,
 With never a throb or leap.
 For hers was now my heart, she said,
 The heart that once had been mine own:
 And in my breast I bore instead
 A cold, cold heart of stone.
 So grew the morning overhead.
 The sun shot downward through the trees
 His old familiar flame:
 All ancient sounds upon the breeze
 From copse and meadow came—
 But I was not the same.
 They call me mad: I smile, I weep,
 Uncaring how or why:
 Yea, when one’s heart is laid asleep,
 What better than to die?
 So that the grave be dark and deep.
 To die! To die? And yet, methinks,
 I drink of life, to-day,
 Deep as the thirsty traveler drinks
 Of fountain by the way:
 My voice is sad, my heart is gay.

³Additional line in *College Rhymes*: “The fruits were rotting in their place,”

⁴“where we lay” in *College Rhymes*

When yestereve was on the wane,
I heard a clear voice singing
So sweetly that,⁵ like summer-rain,⁶
My happy tears came⁷ springing:
My human heart returned again.

*“A rosy child,
Sitting and singing, in a garden fair,
The joy of hearing, seeing,
The simple joy of being—
Or twining rosebuds in the golden hair
That ripples free and wild.*

*“A sweet pale child—
Wearily looking to the purple West—
Waiting the great For-ever
That suddenly shall sever
The cruel chains that hold her from her rest—
By earth-joys unbeguiled.*

*“An angel-child—
Gazing with living eyes on a dead face:
The mortal form forsaken,
That none may now awaken,
That lieth painless, moveless in her place,
As though in death she smiled!*

*“Be as a child—
So shalt thou sing for very joy of breath—
So shalt thou wait thy dying,
In holy transport lying—
So pass rejoicing through the gate of death,
In garment undefiled.”*

Then call me what they will, I know
That now my soul is glad:
If this be madness, better so,
Far better to be mad,
Weeping or smiling as I go.

For if I weep, it is that now
I see how deep a loss is mine,
And feel how brightly round my brow
The coronal might shine,
Had I but kept mine early vow:

And if I smile, it is that now
I see the promise of the years—
The garland waiting for my brow,
That must be won with tears,
With pain—with death—I care not how.

⁵“So sweetly, purely” in *College Rhymes*, “And suddenly” in *Phantasmagoria*

Source: Mischmasch (with minor differences as noted); Phantasmagoria (as “Stanzas for Music”, with minor differences as noted); Three Sunsets

⌊(Written to an old English air)¹

The morn was bright, the steeds were light,
The wedding guests were gay:
Young Ellen stood within the wood
And watched them ⌊pass² away.
She scarcely saw the gallant train:
The tear-drop dimmed her ee:
Unheard the maiden did complain
Beneath the Willow-Tree.

“Oh Robin, thou didst love me well,
⌊Till,³ on a bitter day,
She came, the Lady Isabel,
And stole ⌊thy heart⁴ away.
My tears are vain: I live again
In days that used to be,
When I could meet thy welcome feet
Beneath the Willow-Tree.

“Oh Willow gray, I may not stay
Till Spring renew thy leaf;
But I will hide myself away,
And nurse a ⌊lonely⁵ grief.
It shall not dim Life’s joy for him:
My tears he shall not see:
While he is by, I’ll come not nigh
My weeping Willow-Tree.

“But when I die, oh let me lie
⌊Beneath thy loving shade,⁶
That he may loiter careless by,
Where I am lowly laid.
And let the white white marble tell,
If he should stoop to see,
‘Here lies a maid that loved thee well,
Beneath the Willow-Tree.’”

18.159 Faces in the Fire

Source: All the Year Round, February 11, 1860 (with minor differences as noted);
Mischmasch (with minor differences as noted); Phantasmagoria (with different
punctuation); Three Sunsets

 The night creeps onward, sad and slow:
 In these red embers' dying glow
 The forms of Fancy come and go.¹
 An island-farm—broad² seas of corn
 Stirred³ by the wandering breath of morn—
 The happy spot where I was born.
 The picture fadeth in its place:
 Amid the glow⁴ I seem to trace
 The shifting semblance of a face.
 'Tis now a little childish form—
 Red lips for kisses pouted warm—
 And elf-locks tangled in the storm.
 'Tis now a grave and gentle maid,
 At her own beauty half afraid,
 Shrinking, and⁵ willing to be stayed.⁶
 Oh, Time was young, and Life was warm,
 When first I saw that fairy-form,
 Her dark hair tossing⁷ in the storm.
 And fast and free these pulses played,
 When last I met that gentle maid—
 When last her hand in mine was laid.
 Those locks of jet are turned to gray,
 And she is strange and far away
 That might have been mine own to-day—
 That might have been mine own, my dear,
 Through many and many a happy year—
 That might have sat beside me here.

1

I watch the drowsy night expire,
And Fancy paints at my desire
Her magic pictures in the fire.

²mid

³Swayed

⁴“And fitfully” in *Mischmasch* and *Phantasmagoria*

⁵“yet” in *All the Year Round*

⁶Additional verse:

 'Tis now a matron with her boys,
 Dear centre of domestic joys;
 I seem to hear the merry noise.

⁷“fluttering” in *Mischmasch*

Ay, changeless through the changing scene,
The ghostly whisper rings between,
The dark refrain of 'might have been.'
The race is o'er I might have run:
The deeds are past I might have done;
And sere the wreath I might have won.
Sunk is the last faint flickering blaze:
The vision of departed days
Is vanished even as I gaze.
The pictures, with their ruddy light,
Are changed to dust and ashes white,
And I am left alone with night.

18.160 To M. A. B.

Source: inscribed into a copy of *Alice's Adventures* for Miss Marion Terry, "Mary Ann Bessie Terry", 1866

The royal MAB, dethroned, discrowned
By fairy rebels wild,
Has found a home on English ground,
And lives an English child.
I know it, Maiden, when I see
A fairy-tale upon your knee—
And note the page that idly lingers
Beneath those still and listless fingers—
And mark those dreamy looks that stray
To some bright vision far away,
Still seeking, in the pictured story,
The memory of a vanished glory.

18.161 The Walrus and the Carpenter

Source: Through the Looking Glass (extracted)

The sun was shining on the sea,
Shining with all his might:
He did his very best to make
The billows smooth and bright—
And this was odd, because it was
The middle of the night.

The moon was shining sulkily,
Because she thought the sun
Had got no business to be there
After the day was done—
“It’s very rude of him,” she said,
“To come and spoil the fun!”

The sea was wet as wet could be,
The sands were dry as dry.
You could not see a cloud, because
No cloud was in the sky:
No birds were flying overhead—
There were no birds to fly.

The Walrus and the Carpenter
Were walking close at hand;
They wept like anything to see
Such quantities of sand:
“If this were only cleared away,”
They said, “it *would* be grand!”

“If seven maids with seven mops
Swept it for half a year,
Do you suppose,” the Walrus said,
“That they could get it clear?”
“I doubt it,” said the Carpenter,
And shed a bitter tear.

“O Oysters, come and walk with us!”
The Walrus did beseech.
“A pleasant walk, a pleasant talk,
Along the briny beach:
We cannot do with more than four,
To give a hand to each.”

The eldest Oyster looked at him.
But never a word he said:
The eldest Oyster winked his eye,
And shook his heavy head—
Meaning to say he did not choose
To leave the oyster-bed.

But four young oysters hurried up,

All eager for the treat:
 Their coats were brushed, their faces washed,
 Their shoes were clean and neat—
 And this was odd, because, you know,
 They hadn't any feet.
 Four other Oysters followed them,
 And yet another four;
 And thick and fast they came at last,
 And more, and more, and more—
 All hopping through the frothy waves,
 And scrambling to the shore.
 The Walrus and the Carpenter
 Walked on a mile or so,
 And then they rested on a rock
 Conveniently low:
 And all the little Oysters stood
 And waited in a row.
 "The time has come," the Walrus said,
 "To talk of many things:
 Of shoes—and ships—and sealing-wax—
 Of cabbages—and kings—
 And why the sea is boiling hot—
 And whether pigs have wings."
 "But wait a bit," the Oysters cried,
 "Before we have our chat;
 For some of us are out of breath,
 And all of us are fat!"
 "No hurry!" said the Carpenter.
 They thanked him much for that.
 "A loaf of bread," the Walrus said,
 "Is what we chiefly need:
 Pepper and vinegar besides
 Are very good indeed—
 Now if you're ready Oysters dear,
 We can begin to feed."
 "But not on us!" the Oysters cried,
 Turning a little blue,
 "After such kindness, that would be
 A dismal thing to do!"
 "The night is fine," the Walrus said
 "Do you admire the view?"
 "It was so kind of you to come!
 And you are very nice!"
 The Carpenter said nothing but
 "Cut us another slice:
 I wish you were not quite so deaf—
 I've had to ask you twice!"

"It seems a shame," the Walrus said,
 "To play them such a trick,
 After we've brought them out so far,
 And made them trot so quick!"
 The Carpenter said nothing but
 "The butter's spread too thick!"
 "I weep for you," the Walrus said.
 "I deeply sympathize."
 With sobs and tears he sorted out
 Those of the largest size.
 Holding his pocket-handkerchief
 Before his streaming eyes.
 "O Oysters," said the Carpenter.
 "You've had a pleasant run!
 Shall we be trotting home again?"
 But answer came there none—
 And that was scarcely odd, because
 They'd eaten every one.¹

¹For H. Savile Clarke's dramatization Carroll added an additional verse and some more content:

The Carpenter he ceased to sob;
 The Walrus ceased to weep;
 They'd finished all the oysters;
 And they laid them down to sleep—
 And of their craft and cruelty
 The punishment to reap.

The Carpenter is sleeping, the butter's on his face,
 The vinegar and pepper are all about the place!
 Let oysters rock your cradle and lull you into rest;
 And if that will not do it, we'll sit upon your chest!
 We'll sit upon your chest!
 We'll sit upon your chest!
 The simplest way to do it is to sit upon your chest!
 O woeful, weeping Walrus, your tears are all a sham!
 You're greedier for Oysters than children are for jam.
 You like to have an Oyster to give the meal a zest—
 Excuse me, wicked Walrus, far stamping on your chest!
 For stamping on your chest!
 For stamping on your chest!
 Excuse me, wicked Walrus, for stamping on your chest!

18.162 The year when boilers froze

Source: perhaps written for Samuel Courthorpe Bosanquet, 1855

The sources claim it was written for Robert Holford Macdowall Bosanquet, but his birthday was July 31, not really the date for frozen boilers. Samuel Courthorpe Bosanquet's birthday was March 2, and he is the more likely addressee, anyway. Historical weather data suggest the year 1855, with extreme cold in February, though Carroll didn't mention anything of this in his diary.

The year when boilers froze and ket-
tles crystallised the fender
The natal day of Bosanquet
Dawned on us in its splendour.

For those who wear wool hosen cat-
ching colds a thing unheard of
But this great maxim Bosanquet
Would not believe a word of.

When Frenchmen say 'sare, no zank' et-
iquette suggests the answer
'A zoughtless, zankless Bosanquet
Would be more zief zan man Sir.'

Dear Bosanquet I've here expressed
The grateful feeling that is
But due to one who treats his guest
To genuine oyster patties.

18.163 The Lady of the Ladle

Source: Whitby Gazette, August 31, 1854 (with minor differences as noted);
Mischmasch

Parody on *The Lady of the Lake* by Scott

The youth at eve had drunk his fill
Where stands the “Royal” on the Hill,
And long his midday stroll had made
On the so-called “Marine Parade”—
(Meant, I presume, for seamen brave,
Whose “march is on the mountain wave”—
'Twere just the bathing-place for him
Who stays on land till he can swim—)
Yes,¹ he had strayed into the town,
And paced each alley up and down,
Where still, so narrow grew the way,
The very houses seemed to say,
Nodding to friends across the street,
“One struggle more and we shall meet.”
And he had scaled that awful² stair
That soars from earth to upper air,
Where rich and poor alike must climb,
And walk the treadmill for a time—
That morning he had dressed with care,
And put pomatum in his hair;
He was, the loungers all agreed,
A very heavy swell indeed:
Men thought him, as he swaggered by,
Some scion of nobility,
And never dreamed, so cold his look,
That he had loved—and loved a Cook.
Upon the beach he stood and sighed,
All heedless³ of the rising⁴ tide;
Thus sang he to the listening main,
And soothed his sorrows⁵ with the strain:

Coronach.

“She is gone by the *Hilda*,
She is lost unto Whitby,
And her name is Matilda,
Which my heart it was smit by.
Tho’ I take the *Goliah*,
Yet⁶ I learn to my sorrow,

¹And

²wondrous

³Unheedful

⁴treacherous

⁵sorrow

⁶missing in the *Whitby Gazette*

That 'it won't,' says the crier,
 'Be off till to-morrow.'
 "She had called me her 'Neddy,'
 (Though⁷ there mayn't be munch in it),
 And I should have been ready
 If she'd waited a minute.
 I was following behind her,
 When, if you recollect, I
 Merely ran back to find a
 Gold pin for my neck-tie.
 "Rich dresser of *suet*⁸!
 Prime hand at a *sassage*⁹!
 I have lost thee, I rue it,
 And my fare for the passage!
 Perhaps *she* thinks it funny,
 Aboard of the *Hilda*,
 But I've lost purse and money,
 And thee, oh my 'Tilda!"

His pin of gold the youth undid,
 And in his waistcoat-pocket hid,
 Then gently folded hand in hand,
 And dropped asleep upon the sand.

18.164 A Sea Dirge

Source: The College Rhymes, November 1860 (with signature “Ch. Ch., Lewis Carroll” and minor differences as noted); Phantasmagoria (with minor differences as noted); Rhyme? and Reason?

There are certain things—as, a spider, a ghost,
The income-tax, gout, an umbrella for three—
That I hate, but the thing that I hate the most
Is a thing they call the Sea.

Pour some salt water over the floor—
Ugly I'm sure you'll allow¹ it to be:
Suppose it extended a mile or more,
That's very like the Sea.

Beat² a dog till it howls outright—
Cruel, but all very well for a spree:
Suppose that he did so day and night,
That would be like the Sea.

I had a vision of nursery-maids;
Tens of thousands passed by me—
All leading children with wooden spades,
And this was by the Sea.

Who invented those spades of wood?
Who was it cut them out of the tree?
None, I think, but an idiot could—
Or one that loved the Sea.

¹“confess” in *College Rhymes*

²“pinch” in *College Rhymes*

It is pleasant and dreamy, no doubt, to float
With 'thoughts as boundless, and souls as free':
But, suppose you are very unwell in the boat,
How do you like the Sea?³

Quoted from *The Corsair* by Lord Byron

“And this was by the Sea”

There is an insect that people avoid
(Whence is derived the verb ‘to flee’).
Where have you been by it most annoyed?

³Additional verses, with “were donkeys . . .” in *College Rhymes*:

“But it makes the intellect clear and keen—”
Prove it! Prove it! How can it be?
“Why, what does ‘B sharp’ (in music) mean,
If not the ‘natural C’?”

What, keen? With such questions as ‘When’s high tide?
Is shelling shrimps an improvement to tea?
Are donkeys adapted for Man to ride?’
Such are our thoughts by the Sea.

In lodgings by the Sea.
 If you like your⁴ coffee with sand for dregs,
 A decided hint of salt in your tea,
 And a fishy taste in the very eggs—
 By all means choose the Sea.
 And if, with these dainties to drink and⁵ eat,
 You prefer not a vestige of grass or tree,
 And a chronic state of wet in your feet,
 Then—I recommend the Sea.
 For I have friends who dwell by the coast—
 Pleasant friends they are to me!
 It is when I am with them I wonder most
 That any one likes the Sea.
 They take me a walk: though tired and stiff,
 To climb the heights I madly agree;
 And, after a tumble or so from the cliff,
 They kindly suggest the Sea.
 I try the rocks, and I think it cool
 That they laugh with such an excess of glee,
 As I heavily slip into every pool
 That skirts the cold cold Sea.⁶

⁴missing in *College Rhymes*

⁵“and to” in *College Rhymes*

⁶Additional verses, second verse starts with “Their cheeks were hollow . . .” in *College Rhymes*:

Once I met a friend in the street,
 With wife, and nurse, and children three—
 Never again such a sight may I meet
 As that party from the Sea!
 Their looks were sullen, their steps were slow,
 Convicted felons they seemed to be:
 “Are you going to prison, dear friend?” “On no!
 We’re returning—from the Sea!”

18.165 There be three Badgers on a mossy stone

Source: Sylvie and Bruno (extracted, connected)

There be three Badgers on a mossy stone,
Beside a dark and covered way:
Each dreams himself a monarch on his throne,
And so they stay and stay——
Though their old Father languishes alone,
They stay, and stay, and stay.

There be three Herrings loitering around,
Longing to share that mossy seat:
Each Herring tries to sing what she has found
That makes Life seem so sweet.
Thus, with a grating and uncertain sound,
They bleat, and bleat, and bleat.

The Mother-Herring, on the salt sea-wave,
Sought vainly for her absent ones:
The Father-Badger, writhing in a cave,
Shrieked out "Return, my sons!
You shall have buns," he shrieked, "if you'll behave!
Yea, buns, and buns, and buns!"

"I fear," said she, "your sons have gone astray?
My daughters left me while I slept."
"Yes 'm," the Badger said: "it's as you say."
"They should be better kept."
Thus the poor parents talked the time away,
And wept, and wept, and wept.

Oh, dear beyond our dearest dreams,
Fairer than all that fairest seems!
To feast the rosy hours away,
To revel in a roundelay!
How blest would be
A life so free——

Ipwergis-Pudding to consume,
And drink the subtle Azzigoom!

And if, in other days and hours,
Mid other fluffs and other flowers,
The choice were given me how to dine——
"Name what thou wilt: it shall be thine!"
Oh, then I see
The life for me——

Ipwergis-Pudding to consume,
And drink the subtle Azzigoom!

The Badgers did not care to talk to Fish:
They did not dote on Herrings' songs:
They never had experienced the dish

To which that name belongs:
“And oh, to pinch their tails,” (this was their wish,)
“With tongs, yea, tongs, and tongs!”
“And are not these the Fish,” the Eldest sighed,
“Whose Mother dwells beneath the foam?”
“They *are* the Fish!” the Second one replied.
“And they have left their home!”
“Oh wicked Fish,” the Youngest Badger cried,
“To roam, yea, roam, and roam!”
Gently the Badgers trotted to the shore——
The sandy shore that fringed the bay:
Each in his mouth a living Herring bore——
Those aged ones waxed gay:
Clear rang their voices through the ocean’s roar,
“Hooray, hooray, hooray!”

18.166 The Headstrong Man

Source: Useful and Instructive Poetry

There was a man who stood on high,
Upon a lofty wall;
And every one who passed him by,
Called out "I fear you'll fall."

Naught heeded he of their advice,
He was a headstrong youth,
He stood as if fixed in a vice,
Or like a nail forsooth.

While thus he stood a wind began,
To blow both long and loud,
And soon it blew this headstrong man,
Right down among the crowd.

Full many a head was broken then,
Full many an arm was cracked,
Much they abused headstrong man,
Who sense and wisdom lacked.

For this mishap he cared naught,
As we shall shortly see,

For the next day, as if in sport,
He mounted in a tree.
The tree was withered, old, and grey,
And propped up with a stake,
And all who passed him by did say,
“That branch you’re on will break.”
Naught heeded he of their advice,
He was a headstrong youth,
He stood as fixed in a vice,
Or like a nail forsooth.
While thus he stood the branch began
To break, where he did stand,
And soon it dropped this headstrong man
Into a cart of sand.
The sandman vainly sought for him,
For half an hour or more,
At last he found him in a trim
He ne’er was in before.
For sand his face did nearly hide,
He was a mass of sand:
Loud laughed the sandman when he spied
The branch where he did stand.
“Why, what a foolish man thou art,
To stand in such a place!”
Then took some sand from out his cart,
And flung it in his face.
All wrathful then was sandy-coat,
Wrath filled his sandy eye,
He raised his sandy hand and smote,
The sandman lustily.
Full soon upon the ground he lay,
Urged by the sandman’s fist,
These words were all that he could say,
For those to hear who list.
Moral:
“If headstrong men will stand like me,
Nor yield to good advice,
All that they can expect will be,
To get sand in their eyes.”

18.167 The Pig-Tale

Source: Sylvie and Bruno Concluded (extracted, connected, first verse also in Sylvie and Bruno, with different punctuation)

There was a Pig that sat alone
Beside a ruined Pump:
By day and night he made his moan—
It would have stirred a heart of stone
To see him wring his hoofs and groan,
Because he could not jump.

A certain Camel heard him shout—
A Camel with a hump.
“Oh, is it Grief, or is it Gout?
What is this bellowing about?”
That Pig replied, with quivering snout,
“Because I cannot jump!”

That Camel scanned him, dreamy-eyed.
“Methinks you are too plump.
I never knew a Pig so wide—
That wobbled so from side to side—
Who could, however much he tried,
Do such a thing as *jump*!”

“Yet mark those trees, two miles away,
All clustered in a clump:
If you could trot there twice a day,
Nor ever pause for rest or play,
In the far future—Who can say?—
You may be fit to jump.”

That Camel passed, and left him there,
Beside the ruined Pump.
Oh, horrid was that Pig’s despair!
His shrieks of anguish filled the air.
He wrung his hoofs, he rent his hair,
Because he could not jump.

There was a Frog that wandered by—
A sleek and shining lump:
Inspected him with fishy eye,
And said “O Pig, what makes you cry?”
And bitter was that Pig’s reply,
“Because I cannot jump!”

That Frog he grinned a grin of glee,
And hit his chest a thump
“O Pig,” said, “be ruled by me,
And you shall see what you shall see.
This minute, for a trifling fee,
I’ll teach you how to jump!”

“You may be faint from many a fall,
 And bruised by many a bump:
 But, if you persevere through all,
 And practise first on something small,
 Concluding with a ten-foot wall,
 You’ll find that you *can* jump!”

That Pig looked up with joyful start:
 “Oh Frog, you *are* a trump!
 Your words have healed my inward smart—
 Come, name your fee and do your part:
 Bring comfort to a broken heart,
 By teaching me to jump!”

“My fee shall be a mutton-chop,
 My goal this ruined Pump.
 Observe with what an airy flop
 I plant myself upon the top!
 Now bend your knees and take a hop,
 For that’s the way to jump!”

Uprose that Pig, and rushed, full whack,
 Against the ruined Pump:
 Rolled over like an empty sack,
 And settled down upon his back,
 While all his bones at once went ‘Crack!’
 It was a fatal jump.

That Camel passed, as Day grew dim
 Around the ruined Pump.
 “O broken heart! O broken limb!
 It needs,” that Camel said to him,
 “Something more fairy-like and slim,
 To execute a jump!”

That Pig lay still as any stone,
 And could not stir a stump:
 Nor ever, if the truth were known,
 Was he again observed to moan,
 Nor ever wring his hoofs and groan,
 Because he could not jump.
 That Frog made no remark, for he
 Was dismal as a dump:
 He knew the consequence must be
 That he would never get his fee—
 And still he sits, in miserie,
 Upon that ruined Pump!

18.168 The Trial of a Traitor

Source: Useful and Instructive Poetry

There was a strange being into the North,
And, oh, he was strange to see;
His chin was as broad as the Firth of Forth,
And as deep as the Zuyderzee.

Ne did his chin conceal his knees,
Ne did it show his waist;
Eke was it like a peck of peas,
In human skin encased.

The neighbours oft had viewed his chin
With admiration mute;
“Soothly,” said they, “we will begin,
This man to prosecute.”

“Who knows but that this chin may hide
A sword or pike or gun?
Perhaps the Government,” they cried,
“He’ll murder one by one!”

His warrant duly was enrolled,
“His body ye shall seize,
And in safe custody shall hold,
Till further notices.”

The constables, a grimly pair,
 Marched on their mission fell,
They took their victim by the hair,
 And dragged him to his cell.

The lifelong night upon the stones
 In fetters was he layn,
Whilom his sighs and eke his moans,
 Betoken grief and pain.

The morrow morn the magistrate
 Granted an interview.
His hair was short, though very straight
 Toward the skies it grew.

The magistrate he raised his hand,
 Ne from his seat he stirred,
“Aside,” said he, “I pr’y thee stand,
 Anon thou shalt be heard.”

“Soothly,” said he, “and that will I
 For certes am I weard.”
He sunk into a chair hard by,
 And rubbed his frizzled beard.

The evidence was fairly tried,
 The jury left the dock,
Upon their verdict to decide:
 The key turned in the lock.

“Not guilty.” The judge forward bent,
 His hair of eighty frosts,
“You see the prisoner’s innocent,
 So you must pay the costs.”

Moral: “Pay the costs.”

18.169 A Limerick

Source: sent to Miss Vera Beringer, perhaps 1888

There was a young lady of station,
"I love man" was her sole exclamation;
But when men cried, "You flatter,"
She replied, "Oh! no matter,
Isle of Man is the true explanation."

18.170 Four Riddles. No. I

Source: Phantasmagoria (as “A Double Acrostic”, with minor differences and different introduction as noted); Rhyme? and Reason?

Note that the introductions to the other riddles (only in “Rhyme? and Reason?”) have been moved there, in the original they follow directly, before all of the riddles, inside a square bracket.

⌊These consist of two Double Acrostics and two Charades.

No. I. was written at the request of some young friends, who had gone to a ball at an Oxford Commemoration—and also as a specimen of what might be done by making the Double Acrostic a connected poem instead of what it has hitherto been, a string of disjointed stanzas, on every conceivable subject, and about as interesting to read straight through as a page of a Cyclopædia. The first two stanzas describe the two main words, and each subsequent stanza one of the cross “lights.”¹

There was an ancient City, stricken down
 With a strange frenzy, and for many a day
 They paced from morn to eve the ⌊crowded² town,
 And danced the night away.

I asked the cause: the aged man grew sad:
 They pointed to a building gray and tall,
 And hoarsely answered “Step inside, my lad,
 And then you’ll see it all.”

Yet what are all such gaieties to me
 Whose thoughts are full of indices and surds?
 $x^2 + 7x + 53$
 $= \frac{11}{3}.$

But something whispered “It will soon be done:
 Bands cannot always play, nor ladies smile:
 Endure with patience the distasteful fun
 For just a little while!”

A change came o’er my Vision—it was night:
 We clove a pathway through a frantic throng:

¹Introduction in *Phantasmagoria*:

The Double Acrostic, a form of puzzle which has lately become fashionable, is constructed thus:—Two words are selected having the same number of letters: these are supposed to be written in two parallel columns, and a series of words is then found (their length is immaterial) such that the first column may consist of their initial letters, and the second of their final letters. For instance, if the column-words selected were ‘rose’ and ‘ring,’ we might fill

up thus:—

r	i	v	e	r	
o	b	i			
s	e	v	e	n	The two column-words, and the horizontal words, are then
e	g	g			

described in a series of lines or verses, and the puzzle is complete.

The innumerable specimens of this form of puzzle already published are in every way (if we except the studied insipidity of the separate verses, and their total want of connexion one with another) to be commended. The following attempt, made at the request of some friends who had gone to a ball at an Oxford Commemoration, is printed in the hope of suggesting a possible improvement in the treatment of the subject.

²noisy

The steeds, wild-plunging, filled us with affright:
 The chariots whirled along.
 Within a marble hall a river ran—
 A living tide, half muslin and half cloth:
 And here one mourned a broken wreath or fan,
 Yet swallowed down her wrath;
 And here one offered to a thirsty fair
 (His words half-drowned amid those thunders tuneful)
 Some frozen viand (there were many there),
 A tooth-ache in each spoonful.
 There comes a happy pause, for human strength
 Will not endure to dance without cessation;
 And every one must reach the point at length
 Of absolute prostration.
 At such a moment ladies learn to give,
 To partners who would urge them over-much,
 A flat and yet decided negative—
 Photographers love such.
 There comes a welcome summons—hope revives,
 And fading eyes grow bright, and pulses quicken:
 Incessant pop the corks, and busy knives
 Dispense the tongue and chicken.
 Flushed with new life, the crowd flows back again:
 And all is tangled talk and mazy motion—
 Much like a waving field of golden grain,
 Or a tempestuous ocean.
 And thus they give the time, that Nature meant
 For peaceful sleep and meditative snores,
 To ceaseless³ din and mindless merriment
 And waste of shoes and floors.
 And One (we name him not) that flies the flowers,
 That dreads the dances, and that shuns the salads,
 They doom to pass in solitude the hours,
 Writing acrostic-ballads.
 How late it grows! The hour is surely⁴ past
 That should have warned us with its double-knock?
 The twilight wanes, and morning comes at last—
 “Oh, Uncle, what’s o’clock?”
 The Uncle gravely nods, and wisely winks.
 It *may* mean much, but how is one to know?
 He opes his mouth—yet out of it, methinks,
 No words of wisdom flow.

³thoughtless

⁴Long since the hour is

Source: Useful and Instructive Poetry

I

There was an old farmer of Readall,
Who made holes in his face with a needle,
They went *far* deeper in
Than to pierce through the skin,
And yet strange to say he was made beadle.

II

There was an eccentric old draper,
Who wore a hat made of brown paper,
It went up to a point,
Yet it looked out of joint,
The cause of which *he* said was “vapour.”

III

There was once a young man of Oporta,
Who daily got shorter and shorter,
The reason he said

Was the hod on his head,
Which was filled with the *heaviest* mortar.
His sister, named Lucy O'Finner,
Grew constantly thinner and thinner;
 The reason was plain,
 She slept out in the rain,
And was never allowed any dinner.

18.172 The Two Brothers

Source: Mischmasch

There were two brothers at Twyford school,
And when they had left the place,
It was, "Will ye learn Greek and Latin?
'Or will ye run me a race?
'Or will ye go up to yonder bridge,
'And there we will angle for dace?"

"I'm too stupid for Greek and for Latin,
'I'm too lazy by half for a race,
'So I'll even go up to yonder bridge,
'And there we will angle for dace."

He has fitted together two joints of his rod,
And to them he has added another,
And then a great hook he took from his book,
And ran it right into his brother.

Oh much is the noise that is made among boys
When playfully pelting a pig,
But a far greater pother was made by his brother,
When flung from the top of the brigg.

The fish hurried up by the dozens,
All ready and eager to bite,
For the lad that he flung was so tender and young,
It quite gave them an appetite.

Said he, "Thus shall he wallop about
'And the fish take him quite at their ease,
'For me to annoy it was ever his joy,
'Now I'll teach him the meaning of 'Tees'!"

The wind to his ear brought a voice,
"My brother, you didn't had ought ter!
'And what have I done that you think it such fun
'To indulge in the pleasure of slaughter?"

'A good nibble or bite is my chiefest delight,
'When I'm merely expected to *see*,
'But a bite from a fish is not quite what I wish,
'When I get it performed upon *me*

‘And just now here’s a swarm of dace at my arm,
 ‘And a perch has got hold of my knee!
 ‘For water my thirst was not great at the first,
 ‘And of fish I have quite sufficien—”
 “Oh fear not!” he cried, “for whatever betide,
 ‘We are both in the selfsame condition!
 ‘I am sure that our state’s very nearly alike,
 ‘(Not considering the question of slaughter)
 ‘For I have my perch on the top of the bridge,
 ‘And you have your perch in the water.
 ‘I stick to my perch and your perch sticks to you,
 ‘We are really extremely alike;
 ‘I’ve a turn-pike up here, and I very much fear
 ‘You may soon have a turn with a pike.”
 “Oh, grant but one wish! If I’m took by a fish,
 ‘(For your bait is your brother, good man!)
 ‘Pull him up if you like, but I hope you will strike
 ‘As gently as ever you can.”
 “If the fish be a trout, I’m afraid there’s no doubt
 ‘I must strike him like lightning that’s greased;
 ‘If the fish be a pike, I’ll engage not to strike,
 ‘Till I’ve waited ten minutes at least.”
 “But in those ten minutes to desolate Fate
 ‘Your brother a victim may fall!”
 “I’ll reduce it to five, so *perhaps* you’ll survive,
 ‘But the chance is exceedingly small.”
 “Oh hard is your heart for to act such a part,
 ‘Is it iron, or granite, or steel?”
 “Why, I really can’t say—it is many a day
 ‘Since my heart was accustomed to feel.
 ‘Twas my heart-cherished wish for to slay many fish
 ‘Each day did my malice grow worse,
 ‘For my heart didn’t soften with doing it so often,
 ‘But rather, I should say, the reverse.”
 “Oh would I were back at Twyford school,
 ‘Learning lessons in fear of the birch!”
 “Nay, brother!” he cried, “for whatever betide,
 ‘You are better off here with your perch!
 ‘I am sure you’ll allow you are happier now,
 ‘With nothing to do but to play;
 ‘And this single line here, it is perfectly clear,
 ‘Is much better than thirty a day!
 ‘And as to the rod hanging over your head,
 ‘And apparently ready to fall,
 ‘That, you know, was the case, when you lived in that place,
 ‘So it need not be reckoned at all.

‘Do you see that old trout with a turn-up-nose snout?
‘(Just to speak on a pleasanter theme,)
‘Observe, my dear brother, our love for each other—
‘He’s the one I like best in the stream.

‘To-morrow I mean to invite him to dine,
‘(We shall all of us think it a treat,)
‘If the day should be fine, I’ll just *drop him a line*,
‘And we’ll settle what time we’re to meet.
‘He hasn’t been into society yet,
‘And his manners are not of the best,
‘So I think it quite fair that it should be *my care*,
‘To see that he’s properly dressed.”

Many words brought the wind of “cruel” and “kind,”
And that “man suffers more than the brute”:
Each several word with patience he heard,
And answered with wisdom to boot.
“What? prettier swimming in the stream,
‘Than lying all snugly and flat?
‘Do but look at that dish filled with glittering fish,
‘Has Nature a picture like that?
‘What? a higher delight to be drawn from the sight
‘Of fish full of life and of glee?
‘What a noodle you are! ’tis delightfuller far
‘To kill them than let them go free!
‘I know there are people who prate by the hour
‘Of the beauty of earth, sky, and ocean;
‘Of the birds as they fly, of the fish darting by,
‘Rejoicing in Life and in Motion.
‘As to any delight to be got from the sight,
‘It is all very well for a flat,
‘But *I* think it all gammon, for hooking a salmon
‘Is better than twenty of that!
‘They say that a man of a right-thinking mind
‘Will *love* the dumb creatures he sees—
‘What’s the use of his mind, if he’s never inclined
‘To pull a fish out of the Tees?
‘Take my friends and my home—as an outcast I’ll roam;

‘Take the money I have in the Bank—
‘It is just what I wish, but deprive me of *fish*,
‘And my life would indeed be a blank!’

Forth from the house his sister came,
Her brothers for to see,
But when she saw that sight of awe,
The tear stood in her ee.

“Oh what bait’s that upon your hook,
‘My brother, tell to me?’
“It is but the fantailed pigeon,
‘He would not sing for me.”

“Whoe’er would expect a pigeon to sing,
‘A simpleton he must be!
‘But a pigeon-cote is a different thing
‘To the coat that there I see!”

“Oh what bait’s that upon your hook,
‘My brother, tell to me?’
“It is but the black-capped bantam,
‘He would not dance for me.”

“And a pretty dance you are leading him now!”
In anger aswered she,
“But a bantam’s cap is a different thing
‘To the cap that there I see!”

“Oh what bait’s that upon your hook
‘Dear brother, tell to me?’
“It is my younger brother,” he cried,
“Oh woe and dole is me!

‘T’s mighty wicked, that I is!
‘Or how could such things be?
‘Farewell, farewell sweet sister,
‘I’m going o’er the sea.”

“And when will you come back again,
‘My brother, tell to me?’
“When chub is good for human food,
‘And that will never be!”

She turned herself right round about,
And her heart brake into three,
Said, “One of the two will be wet through and through,
‘And t’other’ll be late for his tea!”

Croft. 1853.

18.173 They both make a roaring

Source: sent to Agnes Hull, December 10, 1877

They both make a roaring—a roaring all night,
They both are a fisherman-father's delight,
They are both, when in fury, a terrible sight!
The First nurses tenderly three little hulls
To the lullaby-music of shrill-screaming gulls
And laughs when they dimple his face with their skulls.
The Second's a tidyish sort of a lad,
Who behaves pretty well to a man he calls "Dad,"
And earns the remark "Well, he isn't so bad!"
Of the two put together, oh what shall I say?
'Tis a time when "to live" means the same as "to play"
When the busiest person does nothing all day:
When the grave College Don, full of lore inexpressi-
ble, puts it all by, and is forced to confess he
Can think but of Agnes and Evey——.

The implied last words omitted at the end are "and Jessie", the solution is: sea, son:
season

18.174 The Majesty of Justice

Source: The College Rhymes, March 1863

An Oxford Idyll

They passed beneath the College gate,
And down the High went slowly on;
Then spake the Undergraduate
To that benign and portly Don;
“They say that Justice is a Queen—
A Queen of awful Majesty—
Yet in the papers I have seen
Some things that puzzle me.

“A Court obscure, so rumour states,
There is, called ‘Vice-Cancellarii,’
Which keeps on Undergraduates,
Who do not pay their bills, a wary eye.
A case, I’m told, was lately brought
Into that tiniest of places,
And ‘Justice’ in that case was sought—
As in most other cases.

“Well! Justice as *I* hold, dear friend,
Is Justice, neither more or less:
I never dreamed it could depend
On ceremonial or dress.
I thought that her imperial sway
In Oxford surely would appear:
But all the papers seem to say
She’s not majestic *here*.”

The portly Don he made reply,
With the most roguish of his glances,
“Perhaps she drops her Majesty
Under peculiar circumstances.”
“But that’s the point!” the young man cried,
“The puzzle that I wish to pen you in—
How are the public to decide
Which article is genuine?”

“Is’t only when the court is large
That we for ‘Majesty’ need hunt?
Would what is Justice in a barge
Be something different in a punt?
“Nay, nay!” the Don replied, amused,
“You’re talking nonsense, sir! You know it!
Such arguments were never used
By any friend of Jowett.”

“Then is it in the men who trudge

(Beef-eaters I believe they call them)
Before each wigged and ermined judge,
For fear some mischief should befall them?
If I should recognise in one
(Through all disguise) my own domestic,
I fear 'twould shed a gleam of fun
Even on the 'Majestic'!"

The portly Don replied, "Ahem!
They can't exactly be its *essence*:
I scarcely think the want of them
The 'Majesty of Justice' lessens.
Besides, they always march awry;
Their gorgeous garments never fit:
Processions don't make Majesty—
I'm quite convinced of it."

"Then is it in the *wig* it lies,
Whose countless rows of rigid curls
Are gazed at with admiring eyes
By country-lads and servant-girls?"
Out laughed that bland and courteous Don:
"Dear sir, I do not mean to flatter—
But surely you have hit upon
The essence of the matter.

"They will not own the Majesty
Of Justice, making monarchs bow,
Unless as evidence they see
The horsehair wig upon her brow.
Yes, yes! *That* makes the silliest men
Seem wise, the meanest men look big:
The 'Majesty of Justice,' then,
Is seated in the WIG."

Oxford. March, 1863. R. W. G.

18.175 They told me you had been to her

Source: Alice's Adventures in Wonderland (extracted)

Other version:
→ 18.145, p. 2323

They told me you had been to her,
And mentioned me to him:
She gave me a good character,
But said I could not swim.
He sent them word I had not gone
(We know it to be true):
If she should push the matter on,
What would become of you?
I gave her one, they gave him two,
You gave us three or more;
They all returned from him to you,
Though they were mine before.
If I or she should chance to be
Involved in this affair,
He trusts to you to set them free,
Exactly as we were.
My notion was that you had been
(Before she had this fit)
An obstacle that came between
Him, and ourselves, and it.
Don't let him know she liked them best,
For this must ever be
A secret, kept from all the rest,
Between yourself and me.

18.176 Three Children

Source: sent to Miss Mary Watson, 1871; here from Carroll's copy, with minor differences as noted in the published variant, which probably is the variant actually sent

[Addressed to three children, whose names form the two upright words, & who are described in the first stanza.]

Three children (their names were so fearful
You'll excuse me for leaving them out)
Sat silent, with faces all tearful;
What *was* it about?

They were sewing, but needles are prickly,
And fingers were cold as could be—
So they didn't get on very quickly,
And they wept, silly Three!

"O Mother!" said they, "England's¹ not a
Nice place for the winter, that's flat.
If you know any country that's hotter,
Please take us to *that*!"

"Cease crying," said she, "little daughters!²
And, when summer returns³ with the flowers,
You shall roam by the smooth-flowing waters,⁴
In sunny hours."

"And in summer," said sorrowful Mary,
"We shall welcome the scream⁵ of the train
That will bring that dear writer of Fairy-
tales hither again."

(Now the person she meant to allude to
Was—well! it is best to forget.
It was some one she *always* was rude to,
Whenever they met.)

"It's my duty," their mother continued,
"To fill with things useful and right
Your small minds: if I put nothing in, you'd
Be ignorant quite.

"But enough now of lessons & thinking:
Your meal is quite ready, I see—
So attend to your eating, & drinking,
You thirsty young Three!"

18.177 To Three Puzzled Little Girls, From the Author

Source: inscribed into a copy of *Alice's Adventures* for the three Misses Drury, 1869

Three little maidens, weary of the Rail—
Three pair of little ears, listening to a tale—
Three little hands, held out in readiness
For three little puzzles, very hard to guess—
Three pair of little eyes, opened wonder-wide
At three little scissors lying side by side—
Three little mouths, that thanked an unknown friend
For one little book he undertook to send—
Tho' whether they'll remember the friend, or book, or day,
For three little weeks, is more than I can say.

August 1869.

18.178 Three Little Maids

Source: inscribed into a copy of *Phantasmagoria* for the three Misses Drury, 1873

Three little maids, one winter day,
While others went to feed,
To sing, to laugh, to dance, to play,
More wisely went to—Reed.
Others, when lesson-time's begun,
Go, half inclined to cry,
Some in a walk, some in a run;
But *these* went in a—Fly.
I give to other little maids
A smile, a kiss, a look,
Presents whose memory quickly fades;
I give to these—a Book.
Happy Arcadia may blind,
While *all abroad*, their eyes;
At home, this book (I trust) they'll find
A *very catching* prize.

18.179 Miss Jones

- (14) So early in the morning
- (15) Some love to roam
- (16), (17) I will marry my own love
- (18) The girl I left behind me
- (19) The perfect cure
- (20) The Minstrel boy
- (21) Beautiful Rhines
- (22) Rule Britannia

Tis a melancholy song,
 and it will not keep you long,
 Tho I specs it will work upon your feelings very strong
 For the agonising moans
 of Miss Arabella Jones
 were warranted to melt the hearts of any paving stones.
 Simon Smith was tall and slim
 and she doted upon him
 But he always called her *Miss Jones*,
 he never got so far
 as to use her Christian name
 it was too familiar
 When she called him "Simon dear"
 he pretended not to hear,
 and she told her sister Susan he behaved extremely queer:
 who said, "Very right! very right!
 shews his true affection
 If you'd prove your Simon's love
 follow my direction.
 I'd certainly advise you just to write a simple letter,
 And to tell him that the cold he kindly asked about is better.
 And say that by the tanyard you will wait in loving hope,
 At nine o'clock this evening if he's willing to elope
 With his faithful Arabella." So she wrote it, & signed it, & sealed it,
 & sent it, & dressed herself out in her holiday things,
 With bracelets & brooches, & ear-rings, & necklace, a watch, & an
 eyeglass, & diamond rings
 For man is a creature weak & impressible, thinks such a deal of
 appearance, my dear.
 So she waited for her Simon
 beside the tanyard gate,
 Regardless of the pieman,
 who hinted it was late.
 Waiting for Simon,
 she coughed in the chilly night,
 until the Tanner found her,

And kindly brought a light
 old coat to wrap around her.
 She felt her cold was getting worse,
 Yet still she fondly whispered,
 "Oh take your time, my Simon,
 although I've waited long.
 I do not fear my Simon dear will fail to come at last,
 Although I know that long ago the time I named is past.
 My Simon! my Simon! Oh, charming man! oh! charming man!
 Dear Simon Smith, sweet Simon Smith."
 Oh, there goes the church-clock,
 the town-clock, the station-clock,
 & there go the other clocks,
 they all are striking twelve!
 Oh Simon, it is getting late,
 It's very dull to sit & wait.
 And really I'm in such a state,
 I hope you'll come at any rate,
 quite early in the morning,
 quite early in the morning.
 Then with prancing bays & a yellow chaise,
 we'll away to Gretna Green.
 For when I am with my Simon Smith —
 oh, that common name! Oh that vulgar name!
 I shall never rest happy till he's changed that name,
 but when he has married me, maybe
 He'll love me to that degree,
 That he'll grant me my prayer
 & will call himself "Clare."
 So she talked all alone,
 as she sat upon a stone,
 Still hoping he would come and find her,
 and she started most unkimmon,
 when instead of darling "Simon"
 t'was a strange man that stood behind her,
 Who civilly observed "Good evening, M'am,
 I really am surprised to see that you're
 Out here alone, for you must own
 from thieves you're not secure.
 A watch, I see. Pray lend it me
 (I hope the gold is pure)
 And all those rings, & other things.
 Don't scream, you know, for long ago
 The policemen off from his beat has gone
 In the kitchen" — "Oh you desperate villain!
 Oh you treacherous thief!"
 And these were the words of her anger & grief.
 "When first to Simon Smith I gave my hand
 I never could have thought he would have acted half so mean as this,
 and where's the new Police?

Oh Simon, Simon! how could you treat your love so ill.
They sit & chatter, they chatter with the cook,
The guardians, so they're called, of public peace.
Through the tanyard was heard the dismal sound,
"How on earth is it policemen never, never, never, can be found?"

Parody on *The Sluggard* by Isaac Watts

'Tis the voice of the Lobster: I heard him declare
"You have baked me too brown, I must sugar my hair."
As a duck with its eyelids, so he with his nose
Trims his belt and his buttons, and turns out his toes.¹
When the sands are all dry, he is gay as a lark,
And will talk in contemptuous tones of the Shark:
But, when the tide rises and sharks are around,
His voice has a timid and tremulous sound.

I passed by his garden, and marked, with one eye,
How the Owl and the Panther were sharing a pie:²
The Panther took pie-crust, and gravy, and meat,
While the Owl had the dish as its³ share of the treat.
When the pie was all finished, the Owl, as a boon,
Was kindly permitted to pocket the spoon:
While the Panther received knife and fork with a growl,
And concluded the banquet by—⁴

¹first version ends here

²first version has "oyster" instead of "Panther" and ends here, for William Boyd's *Songs from Alice's Adventures in Wonderland* Carroll added the following lines:

While the duck and the Dodo, the lizard and cat
Were swimming in milk round the brim of a hat.

³"his", in version from October 31, 1886

⁴For H. Savile Clarke's theatre version (which also had some other small differences), the last two lines were:

But the Panther received both the fork and the knife,
So, when *he* lost his temper, the Owl lost its life.

18.181 To the Looking-Glass world it was Alice that said

Source: Through the Looking Glass (extracted, connected)
Parody on *Bonny Dundee* (*The Doom of Devorgoil*) by Walter Scott

To the Looking-Glass world it was Alice that said
"I've a sceptre in hand, I've a crown on my head.
Let the Looking-Glass creatures, whatever they be,
Come and dine with the Red Queen, the White Queen, and me!"

Then fill up the glasses as quick as you can,
And sprinkle the table with buttons and bran:
Put cats in the coffee, and mice in the tea—
And welcome Queen Alice with thirty-times-three!

"O Looking-Glass creatures," quoth Alice, "draw near!
'Tis an honour to see me, a favour to hear:
'Tis a privilege high to have dinner and tea
Along with the Red Queen, the White Queen, and me!"

Then fill up the glasses with treacle and ink,
Or anything else that is pleasant to drink;
Mix sand with the cider, and wool with the wine—
And welcome Queen Alice with ninety-times-nine!

18.182 Stanza of Anglo-Saxon Poetry

Source: Mischmasch

Other version:
→ 18.183, p. 2405

This curious fragment reads thus in modern characters:

Twas bryllyg, and the slythy toves
Did gyre and gymble in the wabe:
All mimsy were the borogoves;
And the mome raths outgrabe.

The meanings of the words are as follows:

BRYLLYG (derived from the verb to BRYL or BROIL). "the time of broiling dinner, i. e. the close of the afternoon."

SLYTHY (compounded of SLIMY and LITHE). "Smooth and active."

TOVE. a species of Badger. They had smooth white hair, long hind legs, and short horns like a stag: lived chiefly on cheese.

GYRE, verb (derived from GYAOUR or GIAOUR, "a dog"). "to scratch like a dog."

GYMBLE (whence GIMBLET). "to screw out holes in anything."

WABE (derived from the verb to SWAB or SOAK). "the side of a hill" (from its being *soaked* by the rain).

MIMSY (whence MIMSERABLE and MISERABLE). "unhappy."

BOROGOVE. An extinct kind of Parrot. They had no wings, beaks turned up, and made their nests under sun-dials: lived on veal.

MOME (hence SOLEMOME, SOLEMONE, and SOLEMN). "grave."

RATH. A species of land turtle. Head erect: mouth like a shark: the fore legs curved out so that the animal walked on its knees: smooth green body: lived on swallows and oysters.

OUTGRABE, past tense of the verb to OUTGRIBE. (it is connected with the old verb to GRIKE or SHRIKE, from which are derived "shriek" and "creak.") "squeaked."

Hence the literal English of the passage is:

"It was evening, and the smooth active badgers were scratching and boring holes in the hill-side: all unhappy were the parrots; and the grave turtles squeaked out."

There were probably sun-dials on the top of the hill, and the "borogoves" were afraid that their nests would be undermined. The hill was probably full of the nests of "raths," which ran out, squeaking with fear, on hearing the "toves" scratching outside. This is an obscure, but yet deeply-affecting, relic of ancient Poetry.

Ed.
Croft. 1855.

18.183 Jabberwocky

Source: Through the Looking Glass (extracted)

Other version:
→ 18.182, p. 2404

'Twas brillig, and the slithy toves
Did gyre and gimble in the wabe:
All mimsy were the borogoves,
And the mome raths outgrabe.

“Beware the Jabberwock, my son!
The jaws that bite, the claws that catch!
Beware the Jubjub bird, and shun
The frumious Bandersnatch!”

He took his vorpal sword in hand:
Long time the manxome foe he sought—
So rested he by the Tumtum tree,
And stood awhile in thought.

And, as in uffish thought he stood,
The Jabberwock, with eyes of flame,
Came whiffing through the tulgey wood,
And burbled as it came!

One, two! One, two! And through and through
The vorpal blade went snicker-snack!
He left it dead, and with its head
He went galumphing back.

“And hast thou slain the Jabberwock?
Come to my arms, my beamish boy!
O frabjous day! Callooh! Callay!”
He chortled in his joy.

'Twas brillig, and the slithy toves
Did gyre and gimble in the wabe:
All mimsy were the borogoves,
And the mome raths outgrabe.

18.184 Twinkle, twinkle, little bat!

Source: Alice's Adventures in Wonderland (extracted, connected)
Parody on *The Star* by Jane Taylor

Twinkle, twinkle, little bat!
How I wonder what you're at!
Up above the world you fly,
Like a teatray in the sky.
Twinkle, twinkle——

18.185 Double Acrostic (Bremer)

Source: written for the two Misses Bremer, 1870

Two little girls near London dwell,
More naughty than I like to tell.

Upon the lawn the hoops are seen:
The balls are rolling on the green.

The Thames is running deep and wide:
And boats are rowing on the tide.

In winter-time, all in a row,
The happy skaters come and go.

"Papa!" they cry, "Do let us stay!"
He does not speak, but says they may.

"There is a land," he says, "my dear,
Which is too hot to skate, I fear."

Solution: Trina, Freda; turf, river, ice, nod, Africa

18.186 Double Acrostic (Hughes)

Source: written for Agnes and Emily Hughes, perhaps 1869

[Addressed to two children, whose names form the two “upright” words, which are supposed to be described in the first stanza.]

Two little maids were heard to say,
 (They dwelt in London city),
“This summers-day’s too hot to play,
 And picture-books are pretty.”

So, curling up like little mice,
 And clasping hand in hand,
They read (& whispered “Ain’t it nice!”)
 The tale of Wonderland.

Bright streamed the sunlight on the floor,
 To tempt them out to run;
But they (like mice, I’ve said before)
 Loved shadow more than sun.

And one cried “Sister, let’s invent
 A dream—and plan to go
Where Mr. Carroll says he went—
 That Russian Fair, you know!”

The other said “It’s nearly three:
 Papa will call us soon.
His picture’s on the stand, and we
 Must sit this afternoon.”

“And if we sit extremely good,”
 The younger cried in haste,
“He’ll give us wine—he said he would—
 A little tiny taste!”

[In explanation of the last two verses, it should be added that they are an Artist’s children.]

Solution: Agnes, Emily; Alice, gloom, Nijni, easel, sherry

18.187 Two Thieves

Source: inscribed into a copy of *Through the Looking-Glass* for the three Misses Drury, 1872

Two thieves went out to steal one day
Thinking that no one knew it:
Three little maids, I grieve to say,
Encouraged them to do it.

'Tis sad that little children should
Encourage men in stealing!
But these, I've always understood,
Have got no proper feeling.

An aged friend, who chanced to pass
Exactly at the minute,
Said "Children! Take this Looking-glass,
And see your badness in it."

Jan. 11, 1872.

18.188 Thrillings

Source: Rectory Magazine

Uncertain was his hazy pace,
His blood shot eye was dim:
I gazed in wonder on his face,
In wonder gazed on him.

All haggard was his cold-pale cheek,
All haggard was his brow:
Methinks again I hear him speak,
Methinks I hear him now.

As he paced across his lonely room,
With lightly clenched fist,
As his glaring eyes did hideous loom,
Through the blackly gathering mist.

As with desperate hand he struck his brow,
And stamped upon the floor,
Methinks I hear his accents now,
In solemn lone once more,

“I gave my pen a careless flirt,”
He said midst deep-drawn sighs,
“And the scratchy thing the ink did spirt,
‘Right into both my eyes.”

18.189 We lived beneath the mat

Source: Alice's Adventures under Ground (extracted, formatted)

We lived beneath the mat
Warm and snug and fat
But one woe, & that
Was the cat!

To our joys a clog,
In our eyes a fog,
On our hearts a log
Was the dog!

When the cat's away,
Then the mice will play,
But, alas! one day,
(So they say)

Came the dog and cat,
Hunting for a rat,
Crushed the mice all flat,
Each one as he sat
Underneath the mat,
Warm, & snug, & fat—
Think of that!

18.190 A Visitor

Source: Useful and Instructive Poetry

Well, if you must know all the facts, I was merely reading a pamphlet
When what should I hear at the door but a knock as soft as a Zephyr.
I listened and heard it again, so, as loud as I possibly could call,
I shouted "Don't stand waiting there, come in, let me know who you
are, sir!"
Mild he entered the room, with his hat in his hand and his gloves
off,
And a meek gentle bow he performed, while my anger was rapidly
rising,
"Who are you?" I angrily cried, and with hand on his heart as he
bowed low,
In the gentlest of termes he replied, "Your servant, Sir Pokurran-
shuvvle."
Didn't I just ring the bell, "Here, Tom, Dick, George, Andrew!" I
bawled out,
"Come here! show this stranger the door!" My summons they heard
and they did it:
Soon to the door was he guided; once more he turned to me and
bowed low,
And so, with his hand on his heart, with all possible meekness de-
parted.

18.191 Facts

Source: Useful and Instructive Poetry

Were I to take an iron gun,
And fire it off towards the sun;
I grant 'twould reach its mark at last,
But not till many years had passed.
But should that bullet change its force,
And to the planets take its course,
'Twould *never* reach the *nearest* star,
Because it is so *very* far.

18.192 What hand may wreathe

Source: *Garland of Rachel*, privately printed, 1881

What hand may wreathe thy natal crown,
O tiny tender Spirit-blossom,
That out of Heaven hast fluttered down
Into this Earth's cold bosom?
And how shall mortal bard aspire—
All sin-begrimed and sorrow-laden—
To welcome, with the Seraph-choir,
A pure and perfect Maiden?
Are not God's minstrels ever near,
Flooding with joy the woodland mazes?
Which shall we summon, Baby dear,
To carol forth thy praises?
With sweet sad song the Nightingale
May soothe the broken hearts that languish
Where graves are green—the orphans' wail,
The widow's lonely anguish:
The Turtle-dove with amorous coo
May chide the blushing maid that lingers
To twine her bridal wreath anew
With weak and trembling fingers:
But human loves and human woes
Would dim the radiance of thy glory—
Only the Lark such music knows
As fits thy stainless story.
The world may listen as it will—
She recks not, to the skies up-springing:
Beyond our ken she singeth still
For very joy of singing.

Lewis Carroll

18.193 What though the world be cross and crooky?

Source: Wilhelm von Schmitz (extracted)

What though the world be cross and crooky?
Of Life's fair flowers the fairest bouquet
I plucked, when I chose *thee*, my Sukie!
Say, could'st thou grasp at nothing greater
Than to be wedded to a waiter?
And did'st thou deem thy Schmitz a traitor?
Nay! the fond waiter was rejected,
And thou, alone, with flower-bedecked head,
Sitting, did'st sing of one expected.
And while the waiter, crazed and silly,
Dreamed he had won that priceless lily,
At length he came, thy wished-for Willie.
And then thy music took a new key,
For whether Schmitz be boor or duke, he
Is all in all to faithful Sukie!

18.194 When Desolation snatched her tearful prey

Source: Novelty and Romancement (extracted)

When Desolation snatched her tearful prey
From the lorn empire of despairing day;
When all the light, by gemless fancy thrown,
Served but to animate the putrid stone;
When monarchs, lessening on the wildered sight,
Crumblingly vanished into utter night;
When murder stalked with thirstier strides abroad,
And redly flashed the never-sated sword;
In such an hour thy greatness had been seen—
That is, if such an hour had ever been—
In such an hour thy praises shall be sung,
If not by mine, by many a worthier tongue;
And thou be gazed upon by wondering men,
When such an hour arrives, but not till then!

18.195 When I was young, my ringlets waved

Source: The Wasp in a Wig (extracted)

When I was young, my ringlets waved
And curled and crinkled on my head:
And then they said "You should be shaved,
And wear a yellow wig instead."
But when I followed their advice,
And they had noticed the effect,
They said *I* did not look so nice
As they had ventured to expect.
They said it did not fit, and so
It made me look extremely plain:
But what was I to do, you know?
My ringlets would not grow again.
So now that I am old and gray,
And all my hair is nearly gone,
They take my wig from me and say
"How can you put such rubbish on?"
And still, whenever I appear,
They hoot at me and call me "Pig!"
And that is why they do it, dear,
Because I wear a yellow wig.

18.196 Maggie's Visit to Oxford

Source: written for Maggie Bowman when playing the child part in "Bootles' Baby"
(by Hugh Moss, based on *Bootles' Baby: A Story of the Scarlet Lancers* by John
Strange Winter) 1889

Parody on *Battle Cry of Freedom* by George Frederick Root

June 9 to 13, 1889

When Maggie once to Oxford came
On tour as 'Bootles' Baby,'
She said 'I'll see this place of fame,
However dull the day be!'
So with her friend she visited
The sights that it was rich in:
And first of all she poked her head
Inside the Christ Church Kitchen.
The cooks around that little child
Stood waiting in a ring:
And, every time that Maggie smiled,
Those cooks began to sing—
Shouting the Battle-cry of Freedom!
 'Roast, boil, and bake,
 For Maggie's sake!
 Bring cutlets fine,
 For *her* to dine:
 Meringues so sweet,
 For *her* to eat—
 For Maggie may be
 Bootles' Baby!'
Then hand-in-hand, in pleasant talk,
They wandered, and admired
The Hall, Cathedral, and Broad Walk,
Till Maggie's feet were tired:
One friend they called upon—her name
Was Mrs. Hassall—then
Into a College Room they came,
Some savage Monster's Den!
'And, when that Monster dined, I guess
He tore her limb from limb?'
Well, no: in fact, I must confess
That *Maggie dined with him!*
To Worcester Garden next they strolled—
Admired its quiet lake:
Then to St. John's, a College old,
Their devious way they take.
In idle mood they sauntered round

Its lawns so green and flat:
 And in that Garden Maggie found
 A lovely Pussey-Cat!
 A quarter of an hour they spent
 In wandering to and fro:
 And everywhere that Maggie went,
 That Cat was sure to go—
 Shouting the Battle-cry of Freedom!
 ‘Miaow! Miaow!
 Come, make your bow!
 Take off your hats,
 Ye Pussy Cats!
 And purr, and purr,
 To welcome *her*—
 For Maggie may be
 Bootles’ Baby!’

So back to Christ Church—not too late
 For them to go and see
 A Christ Church Undergraduate,
 Who gave them cakes and tea.

Next day she entered, with her guide,
 The Garden called ‘Botanic’:
 And there a fierce Wild-Boar she spied,
 Enough to cause a panic!
 But Maggie didn’t mind, not she!
 She would have faced *alone*,
 That fierce Wild-Boar, because, you see,
 The thing was made of stone!

On Magdalen walls they saw a face
 That filled her with delight,
 A giant-face, that made grimace
 And grinned with all its might!
 A little friend, industrious,
 Pulled upwards, all the while,
 The corner of its mouth, and thus
 He helped that face to smile!

‘How nice,’ thought Maggie, ‘it would be
 If *I* could have a friend
 To do that very thing for *me*,
 And make my mouth turn up with glee,
 By pulling at one end!’

In Magdalen Park the deer are wild
 With joy that Maggie brings
 Some bread a friend had given the child,
 To feed the pretty things.

They flock round Maggie without fear:
 They breakfast and they lunch,

They dine, they sup, those happy deer—
Still, as they munch and munch,
Shouting the Battle-cry of Freedom!

‘Yes, Deer are we,
And dear is she!
We love this child
So sweet and mild:
We all rejoice
At Maggie’s voice:
We all are fed
With Maggie’s bread—
For Maggie may be
Bootles’ Baby!’

To Pembroke College next they go,
Where little Maggie meets
The Master’s wife and daughter: so
Once more into the streets.

They met a Bishop on their way—
A Bishop large as life—
With loving smile that seemed to say
‘Will Maggie be my wife?’

Maggie thought *not*, because, you see,
She was so *very* young,
And he was old as old could be—
So Maggie held her tongue.

‘My Lord, she’s *Bootles’ Baby*: we
Are going up and down,’
Her friend explained, ‘that she may see
The sights of Oxford-town.’

‘Now say what kind of place it is!’
The Bishop gaily cried.
‘The best place in the Provinces!’
That little maid replied.

Next to New College, where they saw
Two players hurl about
A hoop, but by what rule or law
They could not quite make out.

‘Ringo’ the Game is called, although
‘Les Graces’ was once its name,
When *it* was—as its name will show—
A much more *graceful* Game.

The Misses Symonds next they sought,
Who begged the child to take
A book they long ago had bought—
A gift for friendship’s sake!

Away, next morning, Maggie went
From Oxford-town: but yet

The happy hours she there had spent
She could not soon forget.
The train is gone: it rumbles on:
The engine-whistle screams:
But Maggie's deep in rosy sleep—
And softly, in her dreams,
Whispers the Battle-cry of Freedom!
 'Oxford, good-bye!'
 She seems to sigh,
 'You dear old City,
 With Gardens pretty,
 And lawns, and flowers,
 And College-towers,
 And Tom's great Bell—
 Farewell, farewell!
 For Maggie may be
 Bootles' Baby!'

Lewis Carroll

18.197 Puzzle

Source: sent to Mary, Ina, and Harriet or "Hartie" Watson, 1869

When .a.y and I.a told .a..ie they'd seen a
Small ..ea.u.e with .i..., dressed in crimson and blue,
.a..ie cried "'Twas a .ai.y! Why, I.a and .a.y,
I *should* have been happy if I had been you!"

Said .a.y "You wouldn't." Said I.a "You shouldn't—
Since *you* can't be *us*, and *we* couldn't be *you*.
You are *one*, my dear .a..ie, but *we* are a .a..y,
And a.i...e.i. tells us that *one* isn't *two*."

Solution: Mary, Ina, Hartie; creature, wings; Hartie, fairy, Ina, Mary. Mary, Ina;
Hartie, party; arithmetic

18.198 Dreamland

Source: printed 1882; Aunt Judy's Magazine, July 1882 (without introduction, stanzas numbered)

For convenience the first stanza is here repeated after the notes.

Of poetry composed in dreams there are several well-authenticated instances—the most remarkable, perhaps, being the fragment of *Kubla Khan* composed by COLERIDGE: instances of 'dream-music' are, I think, less common. The history of the dream, in which the accompanying specimen of dream-music was composed, is here given in the words of the dreamer. In adapting words to the music, a slight transposition of the lines recalled by the dreamer seemed necessary, in order to meet the rhythmical necessities of the melody.

"I found myself seated, with many others, in darkness, in a large amphitheatre. Deep stillness prevailed. A kind of hushed expectancy was upon us. We sat awaiting I know not what. Before us hung a vast and dark curtain, and between it and us was a kind of stage. Suddenly an intense wish seized me to look upon the forms of some of the heroes of past days. I cannot say whom in particular I longed to behold, but, even as I wished, a faint light flickered over the stage, and I was aware of a silent procession of figures moving from right to left across the platform in front of me. As each figure approached the left-hand corner, it turned and gazed at me, and I knew (by what means I cannot say) its name. One only I recall—Saint George: the light shone with a peculiar blueish lustre on his shield and helmet as he turned and slowly faced me. The figures were shadowy and floated like mist before me: as each one disappeared an invisible choir behind the curtain sang the 'Dream Music.' I awoke with the melody ringing in my ears, and the *words* of the last line complete—'I see the shadows falling. And slowly pass away'—the rest I could not recall."

Words by LEWIS CARROLL.

Music by C. E. HUTCHINSON.

mf ≡

When mid - night mists are creep - ing, And

all the land is sleep - ing, A - round me tread the

migh - ty dead, And slow - ly pass a - way.

cres.

molto rall. pp

dim.

When midnight mists are creeping,
 And all the land is sleeping,
 Around me tread the mighty dead,
 And slowly pass away.

Lo, warriors, saints, and sages,
 From out the vanished ages,
 With solemn pace and reverend face
 Appear and pass away.

The blaze of noonday splendour,
 The twilight soft and tender,
 May charm the eye: yet they shall die,
 Shall die and pass away.

But here, in Dreamland's centre,
 No spoiler's hand may enter,
 These visions fair, this radiance rare,
 Shall never pass away.

I see the shadows falling,
 The forms of old recalling;
 Around me tread the mighty dead,
 And slowly pass away.

18.199 Size and Tears

Source: Mischmasch (as “Bloggs’ Woe”, with minor differences as noted); The College Rhymes, June 1863 (with signature “R. W. G.” and minor differences as noted); Phantasmagoria (with different punctuation); Rhyme? and Reason?

When on the sandy shore I sit,
Beside the salt sea-wave,
And fall into a weeping fit
Because I dare not shave—
A little whisper at my ear
Enquires the reason of my fear.

I answer “If that ruffian Jones
Should recognise me here,
He’d bellow out my name in tones
Offensive to the ear:
He chaffs me so on being stout
(A thing that always puts me out).”

Ah me! I see him on the cliff!
Farewell, farewell to hope,
If he should look this way, and if
He’s got his telescope!
To whatsoever place I flee,
My odious¹ rival follows me!

¹“hated” in *Mischmasch*

For every night, and everywhere,
I meet him out at dinner;
And when I've found some charming fair,
And vowed to die or win her,
The wretch (he's thin and I am stout)
Is sure to come and cut me out!²

“He’s thin and I am stout”

The girls (just like them!) all agree
To praise J. Jones, Esquire:
I ask them what on earth they see

²In *Mischmasch*:

For it has happend once or twice
I've met him out at dinner,
Just as I've come across a nice
Party, and sworn to win her;
And he is slim, and I am stout,
And so he comes and cut me out.

About him to admire?
 They cry³ “He is so sleek and slim,
 It’s quite a treat to look at him!”
 They vanish in tobacco smoke,
 Those visionary maids—
 I feel a sharp and sudden poke
 Between the shoulder-blades—
 “Why, Brown,⁴ my boy! You’re growing stout!”
 (I told you he would find me out!)
 “My growth⁵ is not *your* business, Sir!”
 “No more it is, my boy!
 But if it’s *yours*, as I infer,
 Why, Brown,⁶ I give you joy!
 A man, whose business prospers so,
 Is just the sort of man to know!
 “It’s hardly safe, though, talking here—
 I’d best get out of reach:
 For such a weight as yours, I fear,
 Must shortly sink the beach!”—
 Insult me thus because I’m stout!
 I vow I’ll go and call him out!

Source: Useful and Instructive Poetry

While once in haste I crossed the street,
A little girl I saw,
Deep in the mud she'd placed her feet,
And gazed on me with awe.

"Dear sir," with trembling tone she said,
"Here have I stood for weeks,
And never had a piece of bread,"
Her tears bedewed her cheeks.

"Poor child!" said I, "do you stand here,
And quickly will I buy,
Some wholesome bread and strengthening beer,
And fetch it speedily."

Off ran I to the baker's shop,
As hard as I could pelt,
Fearing 'twas late, I made a stop,
And in my pocket felt.

In my left pocket did I seek,
To see how time went on,
Then grief and tears bedewed my cheek,
For, oh! My watch was gone!

Moral: "Keep your wits about you."

18.201 Prologue (1873)

Source: Prologue to a private theatrical by Miss Hatch and her brother, 1873

[Enter Beatrice, leading Wilfred. She leaves him to centre (front), & after going round on tip-toe to make sure they are not overheard returns & takes his arm.]

B. "Wiffie! I'm *sure* that something *is* the matter!
All day there's been—oh *such* a fuss and clatter!
Mamma's been trying on a funny dress—
I never *saw* the house in such a mess!
(puts her arm round his neck)
Is there a secret, Wiffie?"

W. (Shaking her off) "Yes, of course!"

B. "And you won't tell it? (whispers) Then you're very cross!
(turns away from, & clasps her hands, looking up ecstatically)
I'm sure of *this*! It's something *quite* uncommon!"

W. (stretching up his arms with a mock-heroic air)
"Oh, Curiosity! Thy name is Woman!
(puts his arm round her coaxingly)
Well, Birdie, then I'll tell! (mysteriously) What should you say
If they were going to act—a little play?"

B. (jumping and clapping her hands)
"I'd say '**How nice!**'"

W. (pointing to audience)
"But will it please the rest?"

B. "Oh *yes*! Because, you know, they'll do their best!
[turns to audience]
"You'll praise them, won't you, when you've seen the play?
Just say '**How nice!**' before you go away!"
[they run away hand in hand].

In plain English:

“Will you trot a little quicker?” said a Lily to a Fox.
“It’s gone eleven half an hour, by all the village clocks:
And dinner-time is twelve, you know, and Dolly *will* be wroth.
If we’re not there to carry round the plates of mutton-broth.”
Bow-wow, wow-wow, bow-wow, wow-wow: “Come along!” said Lily.
Bow-wow, wow-wow, bow-wow, wow-wow: Fox said “Don’t be silly.”
“Don’t talk to me of going quick,” said Fox, “you howling Hound!
My feet are done with patent glue, that sticks them to the ground.
It is my own invention—so Dolly needn’t scold:
She can’t invent a patent glue that’s worth its weight in gold!”
Bow-wow, wow-wow, bow-wow, wow-wow: “*I* don’t care for Dolly!”
Bow-wow, wow-wow, bow-wow, wow-wow; Lily said “That’s folly.”

18.203 Will you Walk a Little Faster?

Source: Alice's Adventures in Wonderland (extracted, with different spelling in first version)

Parody on *The Spider and the Fly* by Mary Howitt

“Will you walk a little faster?” said a whiting to a snail,
“There’s a porpoise close behind us, and he’s treading on my tail.
See how eagerly the lobsters and the turtles all advance!
They are waiting on the shingle—will you come and join the dance?
Will you, wo’n’t you, will you, wo’n’t you, will you join the dance?
Will you, wo’n’t you, will you, wo’n’t you, wo’n’t you join the
dance?”

“You can really have no notion how delightful it will be
When they take us up and throw us, with the lobsters, out to sea!”
But the snail replied, “Too far, too far!” and gave a look askance—
Said he thanked the whiting kindly, but he would not join the dance.
Would not, could not, would not, could not, would not join the
dance.
Would not, could not, would not, could not, could not join the
dance.

“What matters it how far we go?” his scaly friend replied,
“There is another shore, you know, upon the other side.
The further off from England the nearer is to France—
Then turn not pale, beloved snail, but come and join the dance.
Will you, wo’n’t you, will you, wo’n’t you, will you join the dance?
Will you, wo’n’t you, will you, wo’n’t you, wo’n’t you join the
dance?”

18.204 A Quotation from Shakespeare with Slight Improvements

Source: Useful and Instructive Poetry

Parody on *Henry the Fourth, Second Part* by William Shakespeare

WAR. Wil't please your grace to go along with us?

P. No I will sit and watch here by the king.

[*Exeunt all but P. H.*]

“Why doth the crown lie there upon his pillow

Being so troublesome a bedfellow?

Oh polished perturbation! golden care!

That keepst the ports of slumber open wide

To many a watchful night—sleep with it now!

Yet not so sound, and half so deeply sweet,

As he whose brow with homely biggin bound

Snores out the watch of night.”

K. Harry I know not

The meaning of the word you just have used.

P. What word, my liege?

K. The word I mean is “biggin.”

P. It means a kind of woolen nightcap, sir,

With which the peasantry are wont to bind

Their wearied heads, ere that they take their rest.

K. Thanks for your explanation, pray proceed.

P. “Snores out the watch of night. Oh majesty!

When thou dost pinch thy bearer thou dost sit

Like a rich armour, worn in heat of day

That scalds with safety.”

K. Scalding ne'er is safe

For it produces heat and feverishness

And blisters on the parched and troubled skin.

P. Pray interrupt not. “By his gates of breath
There lies a downy feather which stirs not.”

K. I knew not that there was one, brush it off.

P. “Did he suspire that light and weightless down
Perforce must move.”

K. And it *hath* moved already.

P. It hath *not* moved. “My gracious lord! my father!
This sleep is sound indeed, this is a sleep
That from this golden rigol hath divorced
So many English—”

K. What meaneth rigol, Harry?

P. My liege, I know not, save that it doth enter
Most apt into the metre.

K. True, it doth.

But wherefore use a word which hath no meaning?

P. My lord, the word is said, for it hath passed
My lips, and all the powers upon this earth
Can not unsay it.

K. You are right, proceed.

P. "So many English kings; thy due from me
 Is tears and heavy sorrows of the blood
 Which nature, love, and filial tenderness,
 Shall, oh dear father, pay thee plenteously:
 My due from thee is this imperial crown
 Which as—"

K. 'Tis *not* your due, sir! I deny it!

P. It *is*, my liege! How dare you contradict me?
 Moreover how can you, a sleeper, know
 That which another doth soliloquise?

K. Your rhetoric is vain, for it is true:
 Therefore no arguments can prove it false.

P. Yet sure it is not possible, my liege!

K. Upon its possibility I dwelt not
 I merely said 'twas true.

P. But yet, my liege,
 What is not possible can never happen,
 Therefore this cannot.

K. Which do you deny
 That I have heard you or that I'm asleep?

P. That you're asleep, my liege.

K. Go on, go on,
 I see you are not fit to reason with.

P. "Which as immediate from thy place and blood
 Derives itself to me. Lo, here it sits,—
 Which heaven itself shall guard, and put the world's whole strength
 Into which giant arm, it shall not force
 This lineal honour from me: this from thee
 Will I to mine leave as 'tis left to me."

18.205 The Three Voices (early version)

Source: *The Train*, November 1856 (with minor differences as noted); *Mischmasch* (with illustration and minor differences as noted); *Phantasmagoria*
Parody on *The Two Voices* by Alfred Lord Tennyson

Other version:
→ 18.55, p. 2100

The First Voice

With hands tight clenched through matted hair,
He crouched in trance of dumb despair:
There came a breeze from out the air.

It passed athwart the glooming flat—
It fanned his forehead as he sat—
It lightly bore away his hat,

All to the feet of one who stood
Like maid enchanted in a wood,
Frowning as darkly as she could.

With huge umbrella, lank and brown,
Unerringly she pinned it down,
Right through the centre of the crown.

Then, with an aspect cold and grim,
Regardless of its battered rim,¹
She took it up and gave it him.

Awhile like one in dreams he stood,
Then faltered forth his gratitude,

¹“brim” in *Mischmasch*

In words just short of being rude:
 For it had lost its shape and shine,
 And it had cost him four-and-nine,
 And he was going out to dine.
 With grave indifference to his speech,
 Fixing her eyes upon the beach,
 She said "Each gives to more than each."
 He could not answer yea or nay;²
 He faltered "Gifts may pass away."
 Yet knew not what he meant to say.
 "If that be so," she staight replied,
 "Each heart with each doth coincide.
 What boots it? For the world is wide."
 And he, not wishing to appear
 Less wise, said "This Material Sphere
 Is but Attributive Idea."
 But when she asked him "Wherefore so?"
 He felt his very whiskers glow,
 And frankly owned "I do not know."
 While, like broad waves of golden grain,
 Or sunlit hues on cloistered pane,
 His colour came and went again.
 Pitying his obvious distress,
 Yet with a tinge of bitterness,
 She said "The More exceeds the Less."
 "A truth of such undoubted weight,"
 He urged, "and so extreme in date,
 It were superfluous to state."
 Roused into sudden passion, she
 In tone of cold³ malignity:
 "To others, yes; but not to thee."
 But when she saw him quail and quake,⁴
 And when he urged "For pity's sake!"
 Once more in gentle tone she spake:
 "Thought in the mind doth still abide;
 That is by Intellect supplied,

²In earlier versions, this verse is:

He raised his eyes in sudden awe,
 And stammered out "Thy wish is law!"
 Yet knew not what he said it for.

³stern

⁴In earlier versions, this verse is:

Then proudly folded arm in arm:
 But when he urged, "I meant no harm,"
 Once more her speech grew mild and calm:

And within that Idea doth hide.

“And he, that yearns the truth to know,⁷⁵
Still further inwardly may go,
And find Idea from Notion flow.

“And thus the chain, that sages sought,
Is to a glorious circle wrought,
For Notion hath its source in Thought.”

When he, with racked and whirling brain,
Feebly implored her to explain,
She simply said it all again.

Wrenched with an agony intense,
He spake, neglecting Sound and Sense,
And careless of all consequence:

“Mind—I believe—is Essence—Ent—
Abstract—that is—an Accident—
Which we—that is to say—I meant—”

When, with quick breath and cheeks all flushed,⁷⁶
At length his speech was somewhat hushed,⁷⁷
She looked at him, and he was crushed.

It needed not her calm reply;
She fixed him with a stony eye,⁷⁸
And he could neither fight nor fly,

While she dissected, word by word,
His speech, half guessed at and half heard,
As might a cat a little bird.

Then, having wholly overthrown
His views, and stripped them to the bone,
Proceeded to unfold her own.

So passed they on with even pace,
Yet gradually one might trace
A shadow growing on his face.

The Second Voice

They walked beside the wave-worn beach,
Her tongue was very apt to teach,
And now and then he did beseech

She would abate her dulcet tone,
Because the talk was all her own,
And he was dull as any drone.

She urged “No cheese is made of chalk:”⁷⁹

⁵“He who doth yearn the Truth to know” in *Mischmasch*

⁶“Thus far he panted, wild and flushed” in *Mischmasch*

⁷“But when his speech was somewhat hushed” in *Mischmasch*

⁸She did the buisness with her eye

⁹No knife is like a fork

And ceaseless flowed her dreary talk,
Tuned to the footfall of a walk.

Her voice was very full and rich,
And, when at length she asked him "Which?"
It mounted to its highest pitch.

He a bewildered answer gave,
Drowned in the sullen moaning wave,
Lost in the echoes of the cave.

He answered her he knew not what;
Like shaft from bow at random shot:
He spoke, but she regarded not.

She waited not for his reply,
But with a downward leaden eye
Went on as if he were not by.

Sound argument and grave defence,
Strange questions raised on "Why?" and "Whence?"
And weighted down with common sense.

"Shall Man be Man? And shall he miss
Of other thoughts no thought but this,
Harmonious dews of sober bliss?

"What boots it? Shall his fevered eye
Through towering nothingness descry
The grisly phantom hurry by?

"And hear dumb shrieks that fill the air;
See mouths that gape, and eyes that stare
And redden in the dusky glare?

"The meadows breathing amber light,
The darkness toppling from the height,
The feathery train of granite Night?

"Shall he, grown gray among his peers,
Through the thick¹⁰ curtain of his tears
Catch glimpses of his earlier years,

"And hear the sounds he knew of yore,
Old shufflings on the sanded floor,
Old knuckles tapping¹¹ at the door?

"Yet still before him as he flies
One pallid form shall ever rise,
And, bodying forth in glassy eyes

"The vision¹² of a vanished good,
Low peering through the tangled wood,
Shall freeze the current of his blood."

Still from each fact, with skill uncouth

¹⁰"dark" in *The Train*

¹¹footsteps kicking

¹²A dim reflex

And savage rapture, like a tooth
She wrenched some slow reluctant truth.

Till, like a silent water-mill,
When summer suns have dried the rill,
She reached a full stop, and was still.

Dead calm succeeded to the fuss,
As when the loaded omnibus¹³
Has reached the railway terminus;

When, for the tumult of the street,
Is heard the engine's stifled beat,
The velvet¹⁴ tread of porters' feet.

With glance that ever sought the ground,
She moved her lips without a sound,
And every now and then she frowned.

He gazed upon the sleeping sea,
And joyed in its tranquillity,
And in that silence dead, but she

To muse a little space did seem,
Then, like the echo of a dream,
Harped back upon her threadbare theme.

Still an attentive ear he lent,
But could not fathom what she meant:
She was not deep, nor eloquent.

He marked the ripple on the sand:
The even swaying of her hand
Was all that he could understand.

He left her, and he turned aside:
He sat and watched the coming tide
Across the shores so newly dried.

He wondered at the waters clear,
The breeze that whispered in his ear,
The billows heaving far and near;

And why he had so long preferred
To hang upon her every word;
"In truth," he said, "it was absurd."

The Third Voice

Not long this transport held its place:
Within a little moment's space
Quick tears were raining down his face.

His heart stood still, aghast with fear;
A wordless voice, nor far nor near,
He seemed to hear and not to hear.

¹³overladen bus

¹⁴weary

"Tears kindle not the doubtful spark:
 If so, why not? Of this remark
 The bearings are profoundly dark."
 "Her speech," he said, "hath caused this pain;
 Easier I count it to explain
 The jargon of the howling main,
 "Or, stretched beside some sedgy brook,
 To con, with inexpressive look,
 An unintelligible book."
 Low spake the voice within his head,
 In words imagined more than said,
 Soundless as ghost's intended tread:
 "If thou art duller than before,
 Why quittedst thou the voice of lore?
 Why not endure, expecting more?"
 "Rather than that," he groaned aghast,
 "I'd writhe in depths of cavern vast,
 Some loathly vampire's rich repast."
 "Twere hard," it answered, "themes immense
 To coop within the narrow fence
 That rings *thy* scant intelligence."
 "Not so," he urged, "nor once alone:
 But there was that within her tone
 Which chilled me to the very bone.
 "Her style was anything but clear,
 And most unpleasantly severe;
 Her epithets were very queer.
 "And yet, so grand were her replies,
 I could not choose but deem her wise;
 I did not dare to criticise;
 "Nor did I leave her, till she went
 So deep in tangled argument
 That all my powers of thought were spent."
 A little whisper inly slid,
 "Yet truth is truth: you know you did—"
 A little wink beneath the lid.
 And, sickened with excess of dread,
 Prone to the dust he bent his head,
 And lay like one three-quarters dead.
 Forth went the whisper like a breeze;
 Left him amid the wondering trees,
 Left him by no means at his ease.
 Once more he weltered in despair,
 With hands, through denser-matted hair,
 More tightly clenched than then they were.

When, bathed in dawn of living red,
 Majestic frowned the mountain head,
 "Tell me my fault," was all he said.
 When, at high noon, the blazing sky
 Scorched in his head each haggard eye,
 Then keenest rose his weary cry.
 And when at eve the¹⁵ unpitying sun
 Smiled grimly on the solemn fun,
 "Alack," he sighed, "what *have* I done?"
 But saddest, darkest was the sight,
 When the cold grasp of leaden Night
 Dashed him to earth, and held him tight.
 Tortured, unaided, and alone,
 Thunders were silence to his groan,
 Bagpipes sweet music to its tone:
 "What? Ever thus, in dismal round,
 Shall Pain and Mystery profound
 Pursue me like a sleepless hound,
 "With crimson-dashed and eager jaws,
 Me, still in ignorance of the cause,
 Unknowing what I broke of laws?"
 The whisper to his ear did seem
 Like echoed flow of silent stream,
 Or shadow of forgotten dream;
 The whisper trembling in the wind:
 "Her fate with thine was intertwined,"
 So spake it in his inner mind;
 "Each orb'd on each a baleful star,
 Each proved the other's blight and bar,
 Each unto each were best, most far:
 "Yea, each to each was worse than foe,
 Thou, a scared dullard, gibbering low,
 And she, an avalanche of woe."

¹⁵"th" in *Mischmasch*

18.206 Woes

Source: Rectory Magazine

With rapid start,
And forward dart,
As when it left the cannon,
Along the ground,
With swift rebound,
The cannon-ball it ran on.

Through hill and dale,
Through many a vale,
Through country, town, and village:
Now onward borne,
Through fields of corn,
Rich recompense for tillage.

Still hop, hop, hop,
No pause nor stop,
O'er precipice and mountain,
Through briar and brake,
Through pool and lake,
By stream and sparkling fountain.

Across the plain,
Along the main,
Of ocean loudly roaring,
Now here, now there,
Now in the air
Like swallow lightly soaring.

And still hop, hop.
No pause nor stop,
The cannon ball it ran on,
With swift rebound,
Along the ground,
As when it left the cannon.

Along the ground,
Through hill and mound
It passed, no pause nor warning,
When, see! oh see!
Beneath a tree,
A lion grimly yawning!

Deep yawning, grim,
Of massive limb,
And jaws with blood be-spattered:
While all around,
Upon the ground,
White skulls and bones were scattered.

With rapid bound,

Along the ground,
The cannon ball did fly on,
No pause, nor stop,
Till it entered, pop!
The deep throat of the lion.
Two chokes, one howl,
A stifled growl,
It died without a struggle:
And the only sound
That was heard around
Was its last expiring guggle.

18.207 Melancholetta

Source: Mischmasch (without images, with minor differences as noted); The College Rhymes, March 1862 (without images, with minor differences as noted); Phantasmagoria (without images, with minor differences as noted); Rhyme? and Reason?

With saddest music all day long
She soothed her secret sorrow:
At night she sighed "I fear 'twas wrong
Such cheerful words to borrow.
Dearest, a sweeter, sadder song
I'll sing to thee to-morrow."
I thanked her, but I could not say
That I was glad to hear it:
I left the house at break of day,
And did not venture near it
Till time, I hoped, had worn away
Her grief, for nought could cheer it!
My dismal sister! Couldst thou know
The wretched home thou keepest!
Thy brother, drowned in daily woe,
Is thankful when thou sleepest;
For if I laugh, however low,
 When thou'rt awake, thou weapest!¹
I took my sister t'other day
 (Excuse the slang expression)
To Sadler's Wells to see the play,
In hopes the new impression
Might in her thoughts, from grave to gay
Effect some slight digression.
I asked _three gay young dogs² from town
To join us in our folly,
 Whose mirth, I thought, might serve to drown³
My sister's melancholy:
The lively Jones, the sportive Brown,
And Robinson the jolly.

¹Additional verse in *Mischmasch*:

Melancholetta! what a word!
Far better Julius Cæsar,
But, though in youth, I've always heard
They christened her Theresa,
"Melancholetta" she preferred,
And I was glad to please her.

²three friends of mine

³"In hopes their liveliness might drown" in *Mischmasch*, "Thinking their mirth might serve to drown" in *College Rhymes*

"At night she sighed"

The maid announced the meal in tones⁴
 That⁵ I myself⁶ had taught her,
 Meant to allay⁷ my sister's moans
 Like oil on troubled water:⁸
 I rushed to Jones, the lively Jones,
 And begged him to escort her.
 Vainly he strove, with ready wit,⁹
 To joke about the weather—
 To ventilate the last 'on dit'—
 To quote the price of leather—
 She groaned "Here I and Sorrow sit:
 Let us lament together!"
 I urged "You're wasting time, you know:
 Delay will spoil the venison."
 "My heart is wasted with my woe!
 There is no rest—in Venice, on¹⁰
 The Bridge of Sighs!" she quoted¹¹ low
 From Byron and from Tennyson.
 I need not tell of¹² soup and fish
 In solemn silence swallowed,
 The sobs that ushered in each dish,
 And its departure followed,
 Nor yet my suicidal wish
 To *be* the cheese I hollowed.
 Some desperate attempts were made
 To start a conversation;
 "Madam,"¹³ the sportive Brown¹⁴ essayed,

⁴This and the next two verses don't appear in *Phantasmagoria*

⁵"Which" in *College Rhymes*

⁶"Of mirth, which" in *Mischmasch*

⁷"They acted on" in *Mischmasch*

⁸"Much like a fire on water—" in *Mischmasch*

⁹In *Mischmasch* this verse is:

"If I'm the man so honour'd—"
 He said in accents cheerful,
 "Allow me, miss—" She raised her head,
 With countenance all tearful—
 "If I be he—" "Boo! hoo!" she said;
 Matters were getting fearful.

In *College Rhymes*, it is

"If I be he so honour'd,"
 Cried Jones, in accents cheerful,
 "Allow me, Miss!"—She raised her head,
 All woe-begone and tearful—
 "If I be he"—"Boo-hoo!" she said;
 Matters were growing fearful!

¹⁰"There is—I stood in Venice, on" in *Mischmasch* and *College Rhymes*

¹¹"muttered" in *College Rhymes*

¹²"I won't detail the" in *Mischmasch*

¹³"Pray, miss," in *Mischmasch* and *College Rhymes*

¹⁴lively Jones

“Which kind of recreation,
 Hunting or fishing, have you made
 Your special occupation?”
 Her lips curved downwards instantly,
 As if of *india-rubber*.¹⁵
 “Hounds *in full cry* I like,” said she:
 (Oh how I longed to snub her!)
 “Of¹⁶ fish, a whale’s the *one*¹⁷ for me,
It is so full of blubber!”
 The *night*’s¹⁸ performance was “King John.”
 “It’s dull,” she wept, “and so-so!”
 A while I let her tears flow on,¹⁹
 She said they soothed her woe so!
 At length the curtain rose upon
 ‘Bombastes Furioso.’
 In vain *we*²⁰ *roared*;²¹ in vain *we*²² tried
 To rouse her into laughter:
 Her *pensive*²³ glances wandered wide
 From orchestra to rafter—
 “*Tier upon tier!*” she said, and sighed;
 And silence followed after.²⁴

¹⁵“Indian-rubber” in *Mischmasch*

¹⁶“For” in *Mischmasch*

¹⁷“sport” in *Mischmasch*

¹⁸“first” in *Mischmasch*

¹⁹“Awhile I let her moans go on;” in *Mischmasch*

²⁰I

²¹“nudged” in *Mischmasch*

²²I

²³“tearful” in *Mischmasch*

²⁴Additional verses in *Mischmasch* and *College Rhymes*:

That very hour I laid a plan
 In utter desperation,
 And felt myself another man
 By fond anticipation;
 And, ere the morrow morn began,
 Had reached the railway station.
 Since then, though I can scarce afford
 (I took so little money)
 To pay for lodging or for board,
 For butter or for honey,
 My spirits are so far resored,
 Sometimes I’m almost funny.
 I live by hook, or else by crook;
 I lodge at present up a
 Two-story back: my favorite book
 Is Martin Farquhar Tupper:
 My landlady, a famous cook,
 Fries bacon for my supper.
 But if my supper is not light—
 A pardonable blunder
 In one whose youthful appetite
 Can no way be kept under—
 Why, then she comes in dreams at night,
 A sight of fear and wonder!

Ch. Ch. B. B.²⁵

But yesterday I tried a slice
 Of melon, and I eat a
 Large quantity, it proved so nice—
 That night in dreams I met her!
 Green as a melon, cold as ice—
 “Dearest!” she moaned, “art better?
 Thy melon I—will that suffice?
 Or must I add—choletta?”

with the following differences in *Mischmasch*: 1. hour → night, “By fond” → “In fond”, “ere the morrow morn” → “long before the day”, 2. far → much, “Sometimes I’m” → “I’m sometimes”, 3. “Two-story back” → “Three-story-back”, 4. blunder → error, lines 3 and 4: (My doctor says, and he is right;/His name, believe me, ’s Ferrer—), line 6: And fills my soul with terror. 5. starts with “The other night . . .”

18.209 Yn the Auckland Castell cellar

Source: The Legend of "Scotland" (extracted)
Parody on *Long long ago* by Thomas H. Bayly

Yn the Auckland Castell cellar,
 Long, long ago,
I was shut—a brisk young feller—
 Woe, woe, ah woe!
 To take her at full-lengthe
 I never hadde the strengthe
Tempore (and soe I tell her)
 Praeterito!

She was hard—oh, she was cruel—
 Long, long ago,
Starved mee here—not even gruel—
 No, believe mee, no!—
 Frae Scotland could I flee,
 I'd gie my last bawbee,—
Arrah, bhoys, fair play's a jhewel,
 Lave me, darlints, goe!

18.210 Father William

Source: Alice's Adventures under Ground (extracted, with minor differences as noted); Alice's Adventures in Wonderland (extracted, with different punctuation in first version)

Parody on *The Old Man's Comforts and How He Gained Them* by Robert Southey

"You are old, Father William," the young man said,
"And your hair has become very¹ white;
And yet you incessantly stand on your head—
Do you think, at your age, it is right?"

"In my youth," Father William replied to his son,
"I feared it might injure the brain;
But, now that I'm perfectly sure I have none,
Why, I do it again and again."

"You are old," said the youth, "as I mentioned before,
And have grown most uncommonly fat;
Yet you turned a back-somersault in at the door—
Pray, what is the reason of that?"

"In my youth," said the sage, as he shook his grey locks,
"I kept all my limbs very supple
By the use of this ointment—one² shilling the box—
Allow me to sell you a couple?"

"You are old," said the youth, "and your jaws are too weak
For anything tougher than suet;
Yet you finished³ the goose, with the bones and the beak—
Pray, how did you manage to do it?"

"In my youth," said his father, "I took to the law,
And argued each case with my wife;
And the muscular strength, which it gave to my jaw,
Has lasted the rest of my life."

"You are old," said the youth, "one would hardly suppose
That your eye was as steady as ever;
Yet you balanced an eel on the end of your nose—
What made you so awfully clever?"

"I have answered three questions, and that is enough,"
Said his father. "Don't give yourself airs!
Do you think I can listen all day to such stuff?
Be off, or I'll kick you down-stairs!"

Part 19

Prefaces, Introductions, and Other Texts about Books

This part contains prefaces, introductions and similar parts of books, unless they form one part with the main content, in which case they are kept together with the main text. It also contains other texts about books, like advertisements and announcements.

19.1 Alice's Adventures in Wonderland

Source: Alice's Adventures in Wonderland, different editions with different prefaces

Preface to the Seventy-Ninth Thousand

As Alice is about to appear on the Stage, and as the lines beginning “’Tis the Voice of the lobster” were found to be too fragmentary for dramatic purposes, four lines have been added to the first stanza, and six to the second, while the Oyster has been developed into a Panther. *Christmas, 1886.*

Preface to the Eighty-Sixth Thousand

Enquiries have been so often addressed to me, as to whether any answer to the Hatter's Riddle (see p. 137) can be imagined, that I may as well put on record here what seems to me to be a fairly appropriate answer, viz. “Because it can

produce a few notes, though they are *very flat*; and it is „never“¹ put with the wrong end in front!” This, however, is merely an after-thought: the Riddle, as originally invented, had no answer at all.

For this eighty-sixth thousand, fresh electrotypes have been taken from the wood-blocks (which, never having been used for printing from, are in as good condition as when first cut in 1865), and the whole book has been set up afresh with new type. If the artistic qualities of this re-issue fall short, in any particular, of those possessed by the original issue, it will not be for want of painstaking on the part of author, publisher, or printer.

I take this opportunity of announcing that the Nursery “Alice,” hitherto priced at four shillings, net, is now to be had on the same terms as the ordinary shilling picture-books—although I feel sure that it is, in every quality (except the *text* itself, on which I am not qualified to pronounce), greatly superior to them. Four shillings was a perfectly reasonable price to charge, considering the very heavy initial outlay I had incurred: still, as the Public have practically said “We will *not* give more than a shilling for a picture-book, however artistically got-up”, I am content to reckon my outlay on the book as so much dead loss, and, rather than let the little ones, for whom it was written, go without it, I am selling it at a price which is, to me, much the same thing as *giving* it away.

Christmas, 1896.

19.2 To the Editor of the Nineteenth Century

Source: Nineteenth Century, November 1887

To the Editor of the NINETEENTH CENTURY

SIR,—I find it stated, in an article on ‘Literature for the Little Ones,’ in your October number, that my little book, ‘Alice’s Adventures in Wonderland,’ first published in 1865, was probably suggested by the late Mr. T. Hood’s ‘From Nowhere to the North Pole,’ first published in 1861. May I mention, first, that I have never read Mr. Hood’s book; secondly, that I composed mine in the summer of 1862, and wrote it out, in the form lately published in facsimile, during 1863? Thus it will be seen that neither book could have been suggested by the other.

As it is, in my view, and no doubt in that of many others of your readers, an act of dishonesty to imitate another man’s book without due acknowledgment, I trust to your sense of justice to allow this reply to the charge brought against me in the above-named article to appear in your forthcoming number.

I am, Sir, your obedient servant,

Lewis Carroll.

29 Bedford Street, Covent Garden.

19.3 Cautions to Readers

Source: added to the advertisements of several books (e. g. in “Eight or Nine Wise Words” and “Sylvie and Bruno Concluded” with different punctuation), in some as “Caution to Readers” only the first paragraph, with variants like “Fräulein Ida Lackowitz, of 14, Lottumstrasse, Berlin” or “Miss Cato Schaap, of 40, West Zeedijk, Rotterdam”; here the variant from The Nursery “Alice”

On August 1st, 1881, a story appeared in *Aunt Judy’s Magazine* No. 184, entitled “The Land of Idleness, by LEWIS CARROLL.” This story was really written by a lady, FRÄULEIN IDA LACKOWITZ. Acting on her behalf, Mr. CARROLL forwarded it to the Editor: and this led to the mistake of naming him as its author.

In October, 1887, the writer of an article on “Literature for the Little ones,” in *The Nineteenth Century*, stated that, in 1864, “TOM HOOD was delighting the world with such works as *From Nowhere to the North Pole*. Between TOM HOOD and Mr. LEWIS CARROLL there is more than a suspicion of resemblance in some particulars. *Alice’s Adventures in Wonderland* narrowly escapes challenging a comparison with *From Nowhere to the North Pole*. The idea of both is so similar that Mr. CARROLL can hardly have been surprised if some people have believed he was inspired by HOOD.” The date 1864 is a mistake. *From Nowhere to the North Pole* was first published in 1874.¹

¹“1874, nine years after the publication of *Alice’s Adventures in Wonderland*.” in *Sylvie and Bruno Concluded*

Preface

As the chess-problem, given on a previous page, has puzzled some of my readers, it may be well to explain that it is correctly worked out, so far as the *moves* are concerned. The *alternation* of Red and White is perhaps not so strictly observed as it might be, and the “castling” of the three Queens is merely a way of saying that they entered the palace: but the “check” of the White King at move 6, the capture of the Red Knight at move 7, and the final “checkmate” of the Red King, will be found, by any one who will take the trouble to set the pieces and play the moves as directed, to be strictly in accordance with the laws of the game.

The new words, in the poem “Jabberwocky” (see p. 184), have given rise to some difference of opinion as to their pronunciation: so it may be well to give instructions on *that* point also. Pronounce “slithy” as if it were the two words “sly, the”: make the ‘g’ *hard* in “gyre” and “gimble”: and pronounce “rath” to rhyme with “bath.”

For this sixty-first thousand, fresh electrotypes have been taken from the wood-blocks (which, never having been used for printing from, are in as good condition as when first cut in 1871), and the whole book has been set up afresh with new type. If the artistic qualities of this re-issue fall short, in any particular, of those possessed by the original issue, it will not be for want of painstaking on the part of author, publisher, or printer.

I take this opportunity of announcing that the Nursery “Alice,” hitherto priced at four shillings, net, is now to be had on the same terms as the ordinary shilling picture-books—although I feel sure that it is, in every quality (except the *text* itself, in which I am not qualified to pronounce), greatly superior to them. Four shillings was a perfectly reasonable price to charge, considering the very heavy initial outlay I had incurred: still, as the Public have practically said, “We will *not* give more than a shilling for a picture-book, however artistically got-up,” I am content to reckon my outlay on the book as so much dead loss, and, rather than let the little ones, for whom it was written, go without it, I am selling it at a price which is, to me, much the same thing as *giving* it away.

Christmas, 1896

19.5 Through the Looking-Glass (Times)

1893

Source: The Times, December 2, 1893

Mr. Lewis Carroll, after having for over 25 years made it his chief object with regard to his books that they should be of the best workmanship attainable at the price is deeply annoyed to find that the last issue of "Through the Looking-glass," consisting of the Sixtieth Thousand, has been put on sale without its being noticed that most of the pictures have failed so much in the printing as to make the book not worth buying. He requests all holders of copies to send them to Messrs. Macmillan and Co., 29, Bedford-street, Covent-garden, with their names and addresses, and copies of the next issue shall be sent them in exchange. Instead, however, of destroying the unsold copies, he proposes to utilise them by giving them away to mechanics' institutes, village school libraries, and similar institutions, where the means for purchasing such books are scanty. Accordingly, he invites applications for such gifts, addressed to him, "care of Messrs. Macmillan." Every such application should be signed by some responsible person, and should state how far they are able to buy books for themselves, and what is their average number of readers. He takes this opportunity of announcing that, if, at any future time, he should wish to communicate anything to his readers, he will do so by advertising in the "Agony" Column of some of the daily papers on the first Tuesday in the month.

1894

Source: The Daily News, March 6, 1894 (with minor differences in spelling and punctuation); The Times, March 6, 1894

Mr. Lewis Carroll advertised on Dec. 2, 1893, that the sixtieth thousand was withdrawn from sale, as some of the pictures had failed in the printing, and that he would present them to mechanics' institutes, village reading rooms, &c., on receiving applications, addressed 29, Bedford-street, Covent-garden, stating how far they are able to buy books for themselves and what is their average number of readers. He has received a great number of applications, but not enough to exhaust the supply. Many of the applicants have neglected to furnish the required information, and it will be necessary to send a circular to them and to get their replies before they can have copies. He takes this opportunity of giving his readers the rules for "Co-operative Backgammon," which he thinks will prove a novel and interesting variety of the game. (1.) Each player throws three dice: with two he moves for himself, and with the third for his adversary. (2.) If no one of the three dice is available for the adversary, a player may use any two he likes: otherwise he is bound to leave, as third die, one which will be available for the adversary. If at any future time Mr. Carroll should wish to communicate anything to his readers, he will do so by advertising in the "Agony" column of some of the daily papers on the first Tuesday in the month.

19.7 Alice's Adventures under Ground

Source: Alice's Adventures under Ground (preface only in book, where the images are monochrome)

“Who will Riddle me the How and the Why?”

So questions one of England's sweetest singers. The “How?” has already been told, after a fashion, in the verses prefixed to “Alice in Wonderland”; and some other memories of that happy summer day are set down, for those who care to see them, in this little book—the germ that was to grow into the published volume. But the “Why?” cannot, and need not, be put into words. Those for whom a child's mind is a sealed book, and who see no divinity in a child's smile, would read such words in vain: while for any one that has ever loved one true child, no words are needed. For he will have known the awe that falls on one in the presence of a spirit fresh from GOD's hands, on whom no shadow of sin, and but the outermost fringe of the shadow of sorrow, has yet fallen: he will have felt the bitter contrast between the haunting selfishness that spoils his best deeds and the life that is but an overflowing love—for I think a child's *first* attitude to the world is a simple love for all living things: and he will have learned that the best work a man can do is when he works for love's sake only, with no thought of name, or gain, or earthly reward. No deed of ours, I suppose, on this side

Quoted from *The 'How' and the 'Why'*
by Alfred Lord
Tennyson

the grave, is really unselfish: yet if one can put forth all one's powers in a task where nothing of reward is hoped for but a little child's whispered thanks, and the airy touch of a little child's pure lips, one seems to come somewhere near to this.

There was no idea of publication in my mind when I wrote this little book: *that* was wholly an afterthought, pressed on me by the "perhaps too partial friends" who always have to bear the blame when a writer rushes into print: and I can truly say that no praise of theirs has ever given me one hundredth part of the pleasure it has been to think of the sick children in hospitals (where it has been a delight to me to send copies) forgetting, for a few bright hours, their pain and weariness—perhaps thinking lovingly of the unknown writer of the tale—perhaps even putting up a childish prayer (and oh, how much it needs!) for one who can but dimly hope to stand, some day, not quite out of sight of those pure young faces, before the great white throne. "I am very sure," writes a lady-visitor at a Home for Sick Children, "that there will be many loving earnest prayers for you on Easter morning from the children."

I would like to quote further from her letters, as embodying a suggestion that may perhaps thus come to the notice of some one able and willing to carry it out.

"I want you to send me one of your Easter Greetings for a very dear child who is dying at our Home. She is just fading away, and 'Alice' has brightened some of the weary hours in her illness, and I know that letter would be such a delight to her—especially if you would put 'Minnie' at the top, and she could know you had sent it for her. She knows you, and would so value it. . . . She suffers so much that I long for what I know would so please her." . . . "Thank you very much for sending me the letter, and for writing Minnie's name. . . . I am

quite sure that all these children will say a loving prayer for the 'Alice-man' on Easter Day: and I am sure the letter will help the little ones to the real Easter joy. How I do wish that you, who have won the hearts and confidence of so many children, would do for them what is so very near my heart, and yet what no one will do, viz. write a book for children about GOD and themselves, which is *not* goody, and which begins at the right end, about religion, to make them see what it really is. I get quite miserable very often over the children I come across: hardly any of them have an idea of *really* knowing that GOD loves them, or of loving and confiding in Him. They will love and trust *me*, and be sure that I want them to be happy, and will not let them suffer more than is necessary: but as for going to Him in the same way, they would never think of it. They are dreadfully afraid of Him, if they think of Him at all, which they generally only do when they have been naughty, and they look on all connected with Him as very grave and dull: and, when they are full of fun and thoroughly happy, I am sure they unconsciously hope He is not looking. I am sure I don't wonder they think of Him in this way, for people never talk of Him in connection with what makes their little lives the brightest. If they are naughty, people put on solemn faces, and say He is very angry or shocked, or something which frightens them: and, for the rest, He is talked about only in a way that makes them think of church and having to be quiet. As for being taught that all Joy and all Gladness and Brightness is His Joy—that He is wearying for them to be happy, and is not hard and stern, but always doing things to make their days brighter, and caring for them so tenderly, and wanting them to run to Him with *all* their little joys and sorrows, they are not taught that. I do so long to make them trust Him as they trust us, to feel that He will 'take their part' as they do with us in their little woes, and to go to Him in their plays and enjoyments and not only when they say their prayers. I was quite grateful to one little dot, a short time ago, who said to his mother 'when I am in bed, I put out my hand to see if I can feel JESUS and my angel. I thought perhaps *in the dark* they'd touch me, but they never have yet.' I do so want them to *want* to go to Him, and to feel how, if He is there, it *must* be happy."

Let me add—for I feel I have drifted into far too serious a vein for a preface to a fairy-tale—the deliciously naïve remark of a very dear child-friend, whom I asked, after an acquaintance of two or three days, if she had read 'Alice' and the 'Looking-Glass.' "Oh yes," she replied readily, "I've read both of them! And I think" (this more slowly and thoughtfully) "I think 'Through the Looking-Glass' is *more* stupid than 'Alice's Adventures.' Don't *you* think so?" But this was a question I felt it would be hardly discreet for me to enter upon.

Lewis Carroll.

Dec. 1886.

Postscript

The profits, if any, of this book will be given to Children's Hospitals and Convalescent Homes for Sick Children; and the accounts, down to June 30 in each year, will be published in the St. James's Gazette, on the second Tuesday of the following December.

P.P.S.—The thought, so prettily expressed by the little boy, is also to be found in Longfellow's "Hiawatha," where he appeals to those who believe

“That the feeble hands and helpless,
Groping blindly in the darkness,
Touch God’s right hand in that darkness,
And are lifted up and strengthened.”

Quoted from *The
Song of Hiawatha* by
Henry Wadsworth
Longfellow

19.8 To All Readers of *Alice's Adventures Under Ground*

1887

Source: The St. James's Gazette, December 13, 1887

When this book appeared last Christmas, I undertook that the profits, if any, should be given to Children's Hospitals and Convalescent Homes for Sick Children, and that the accounts, down to June 30 in each year, should be published, in the *St. James's Gazette*, on the second Tuesday in the following December. On this occasion I have only to announce that—although 1,575 copies of the book had been sold on June 30—the receipts had not quite overtaken the heavy outlay incurred in bringing it out.

Lewis Carroll.
Tuesday, Dec. 13, 1887.

1888

Source: The St. James's Gazette, December 11, 1888

When this book made its first appearance, I undertook that the profits, if any, should be given to Children's Hospitals and Convalescent Homes for Sick Children, and that the accounts, down to June 30 in each year, should be published, in the *St. James's Gazette*, on the second Tuesday in the following December. On this occasion I have only to announce that—although 1687 copies of the book had been sold on June 30—the receipts had not quite overtaken the heavy outlay incurred in bringing it out.

Lewis Carroll.
Tuesday, Dec. 11, 1888.

1889

Source: The St. James's Gazette, December 10, 1889

When this book (which is a facsimile of the original MS. book, written in 1863, and afterwards developed into "Alice's Adventures in Wonderland") made its first appearance in 1886, I undertook that the profits, if any, should be given to Children's Hospitals and Convalescent Homes for Sick Children, and that the accounts of the disposal of the profits, down to June 30 in each year, should be published, in the *St. James's Gazette*, on the second Tuesday in the following December. On this occasion I have again to announce that—although 1742 copies of the book had been sold on June 30, 1889—the receipts had not overtaken the heavy outlay incurred in bringing it out. The exact balance against the book was £117 14s. 7d. If ever the balance should be in favour of the book, I will advertise again. Till then "speech" may be "silvern," but "silence" is (literally) "golden"!

19.9 The Nursery “Alice”

Source: The Nursery “Alice”

(Cover)

Preface

(Addressed to any Mother.)

I have reason to believe that “Alice’s Adventures in Wonderland” has been read by some hundreds of English Children, aged from Five to Fifteen: also by Children, aged from Fifteen to Twenty-five: yet again by Children, aged from Twenty-five to Thirty-five: and even by Children—for there *are* such—Children in whom no waning of health and strength, no weariness of the solemn mockery, and the gaudy glitter, and the hopeless misery, of Life has availed to parch the pure fountain of joy that wells up in all child-like hearts—Children of a “certain” age, whose tale of years must be left untold, and buried in respectful silence.

And my ambition *now* is (is it a vain one?) to be read by Children aged from Nought to Five. To be read? Nay, not so! Say rather to be thumbed, to be cooed over, to be dogs’-eared, to be rumped, to be kissed, by the illiterate, ungrammatical, dimpled Darlings, that fill your Nursery with merry uproar, and your inmost heart of hearts with a restful gladness!

Such, for instance, as a child I once knew, who—having been carefully instructed that *one* of any earthly thing was enough for any little girl; and that to ask for *two* buns, *two* oranges, *two* of anything, would certainly bring upon her the awful charge of being “greedy”—was found one morning sitting up in bed, solemnly regarding her *two* little naked feet, and murmuring to herself, softly and penitently, “deedy!”

Eastertide, 1889.

19.10 For All Lovers of Children

Source: *The Lady*, March 24, March 31 (both with minor differences as noted), April 14, April 28, May 12, May 19, May 26, 1892 (as part of the *Syzygy* column)

When I brought out, in 1890, "*The Nursery Alice*" (a thin 4to book, containing 20 coloured enlargements of Tenniel's illustrations to "Alice in Wonderland," with text adapted to very young children, and with a coloured picture-cover, designed by Miss E. G. Thomson), the colours, in the first impression, came out rather brighter than I liked. The second impression was exactly right; and these are now on sale, at 4s. each. I am selling off the over-bright ones, as a "People's Edition," at 2s. each (which scarcely covers the cost of production), as long as they last: when they are exhausted, no more can be supplied at so cheap a rate. If not quite artistic enough for your own children, you will find them well suited to give to invalid children among the poor. I shall be very glad to receive the addresses of any Hospitals, or Homes, for Sick Children, where the funds are not adequate for buying them books, and where I have not already presented copies of the various "Alice" books: my present list contains the addresses of 134 such Institutions, whose wants I have already supplied.¹ The publishers are Messrs. Macmillan and Co., 29, Bedford Street, Strand.

¹Missing in the first version

19.11 For All Writers of Letters

Source: *The Lady*, March 24, April 7, April 21, May 5, May 19, May 26, 1892 (as part of the Syzygy column)

“Necessity is the mother of invention”: and it was the constant worry, of never having ready to hand, when one wanted it, a postage-stamp of the right value for a letter or parcel, which drove me to invent my “Wonderland Postage-Stamp Case,” which contains twelve pockets, marked for stamps of various values, and two Coloured Pictorial Surprises from “Alice in Wonderland.” It is accompanied with a small book, “Eight or Nine Wise Words about Letter-Writing.”¹ The price is 1s., but, if it be ordered by post, additional payment will be required to cover postage, as follows:—One copy 1-1/2d.; two or three, 2d.; four, 2-1/2d.; five to fourteen, 3d.; and every subsequent fourteen, 1-1/2d. The publishers are Messrs. Emberlin and Son, 4, Magdalen Street, Oxford.

¹Remark: → 15.6, p. 1908

19.12 Sylvie and Bruno

Source: Sylvie and Bruno

One little picture in this book, the Magic Locket, at p. 355, was drawn by 'Miss Alice Havers.' I did not state this on the title-page, since it seemed only due, to the artist of all these (to my mind) *wonderful* pictures, that his name should stand there alone.

The descriptions, at pp. 462, 463, of Sunday as spent by children of the last generation, are quoted *verbatim* from a speech made to me by a child-friend and a letter written to me by a lady-friend.

The Chapters, headed 'Fairy Sylvie' and 'Bruno's Revenge,' are a reprint, with a few alterations, of a little fairy-tale which I wrote in the year 1867, at the request of the late Mrs. Gatty, for 'Aunt Judy's Magazine,'¹ which she was then editing.

It was in 1874, I believe, that the idea first occurred to me of making it the nucleus of a longer story. As the years went on, I jotted down, at odd moments, all sorts of odd ideas, and fragments of dialogue, that occurred to me—who knows how?—with a transitory suddenness that left me no choice but either to record them then and there, or to abandon them to oblivion. Sometimes one could trace to their source these random flashes of thought—as being suggested by the book one was reading, or struck out from the 'flint' of one's own mind by the 'steel' of a friend's chance remark—but they had also a way of their own, of occurring, *à propos* of nothing—specimens of that hopelessly illogical phenomenon, 'an effect without a cause.' Such, for example, was the last line of 'The Hunting of the Snark,' which came into my head (as I have already related in 'The Theatre' for April, 1887²) quite suddenly, during a solitary walk: and such, again, have been passages which occurred in *dreams*, and which I cannot trace to any antecedent cause whatever. There are at least *two* instances of such dream-suggestions in this book—one, my Lady's remark, 'it often runs in families, just as a love for pastry does', at p. 358; the other, Eric Lindon's *badinage* about having been in domestic service, at p. 444.

And thus it came to pass that I found myself at last in possession of a huge unwieldy mass of literature—if the reader will kindly excuse the spelling—which only needed stringing together, upon the thread of a consecutive story, to constitute the book I hoped to write. Only! The task, at first, seemed absolutely hopeless, and gave me a far clearer idea, than I ever had before, of the meaning of the word 'chaos': and I think it must have been ten years, or more, before I

¹Remark: → 3.11, p. 667

²Remark: → 14.4, p. 1883

had succeeded in classifying these odds-and-ends sufficiently to see what sort of a story they indicated: for the story had to grow out of the incidents, not the incidents out of the story.

I am telling all this, in no spirit of egoism, but because I really believe that some of my readers will be interested in these details of the 'genesis' of a book, which looks so simple and straight-forward a matter, when completed, that they might suppose it to have been written straight off, page by page, as one would write a letter, beginning at the beginning and ending at the end.

It is, no doubt, *possible* to write a story in that way: and, if it be not vanity to say so, I believe that I could, myself,—if I were in the unfortunate position (for I do hold it to be a real misfortune) of being obliged to produce a given amount of fiction in a given time,—that I could 'fulfil my task,' and produce my 'tale of bricks,' as other slaves have done. One thing, at any rate, I could guarantee as to the story so produced—that it should be utterly commonplace, should contain no new ideas whatever, and should be very very weary reading!

This species of literature has received the very appropriate name of 'padding'—which might fitly be defined as 'that which all can write and none can read.' That the present volume contains *no* such writing I dare not avow: sometimes, in order to bring a picture into its proper place, it has been necessary to eke out a page with two or three extra lines: but I can honestly say I have put in no more than I was absolutely compelled to do.

My readers may perhaps like to amuse themselves by trying to detect, in a given passage, the one piece of 'padding' it contains. While arranging the 'slips' into pages, I found that the passage, which now extends from the top of p. 339 to the top on p. 340, was 2 lines too short. I supplied the deficiency, not by interpolating a word here and a word there, but by writing in 2 consecutive lines. Now can my readers guess *which* they are?

A harder puzzle—if a harder be desired—would be to determine, as to the Gardener's Song, in *which* cases (if any) the stanza was adapted to the surrounding text, and in *which* (if any) the text was adapted to the stanza.

Perhaps the hardest thing in all literature—at least *I* have found it so: by no voluntary effort can I accomplish it: I have to take it as it comes—is to write anything *original*. And perhaps the easiest is, when once an original line has been struck out, to follow it up, and to write any amount more to the same tune. I do not know if 'Alice in Wonderland' was an *original* story—I was, at least, no *conscious* imitator in writing it—but I do know that, since it came out, something like a dozen story-books have appeared, on identically the same pattern. The path I timidly explored—believing myself to be 'the first that ever burst into that silent sea'—is now a beaten high-road: all the way-side flowers have long ago been trampled into the dust: and it would be courting disaster for me to attempt that style again.

Hence it is that, in 'Sylvie and Bruno,' I have striven—with I know not what success—to strike out yet another new path: be it bad or good, it is the best I can do. It is written, not for money, and not for fame, but in the hope of supplying, for the children whom I love, some thoughts that may suit those hours of innocent merriment which are the very life of Childhood; and also in the hope of suggesting, to them and to others, some thoughts that may prove, I would fain hope, not wholly out of harmony with the graver cadences of Life.

If I have not already exhausted the patience of my readers, I would like

to seize this opportunity—perhaps the last I shall have of addressing so many friends at once—of putting on record some ideas that have occurred to me, as to books desirable to be written—which I should much like to *attempt*, but may not ever have the time or power to carry through—in the hope that, if I should fail (and the years are gliding away *very* fast) to finish the task I have set myself, other hands may take it up.

First, a Child's Bible. The only real *essentials* of this would be, carefully selected passages, suitable for a child's reading and pictures. One principle of selection, which I would adopt, would be that Religion should be put before a child as a revelation of *love*—no need to pain and puzzle the young mind with the history of crime and punishment. (On such a principle I should, for example, omit the history of the Flood.) The supplying of the pictures would involve no great difficulty: no new ones would be needed: hundreds of excellent pictures already exist, the copyright of which has long ago expired, and which simply need photo-zincography, or some similar process, for their successful reproduction. The book should be handy in size—with a pretty attractive-looking cover—in a clear legible type—and, above all, with abundance of pictures, pictures, pictures!

Secondly, a book of pieces selected from the Bible—not single texts, but passages of from 10 to 20 verses each—to be committed to memory. Such passages would be found useful, to repeat to one's-self and to ponder over, on many occasions when reading is difficult, if not impossible: for instance, when lying awake at night—on a railway-journey—when taking a solitary walk—in old age, when eye-sight is failing or wholly lost—and, best of all, when illness, while incapacitating us for reading or any other occupation, condemns us to lie awake through many weary silent hours: at such a time how keenly one may realise the truth of David's rapturous cry '*O how sweet are thy words unto my throat: yea, sweeter than honey unto my mouth!*'

Quoted from Psalm
119:103

I have said 'passages,' rather than single texts, because we have no means of *recalling* single texts: memory needs *links*, and here are none: one may have a hundred texts stored in the memory, and not be able to recall, at will, more than half-a-dozen—and those by mere chance: whereas, once get hold of any portion of a *chapter* that has been committed to memory, and the whole can be recovered: all hangs together.

Thirdly, a collection of passages, both prose and verse, from books other than the Bible. There is not perhaps much, in what is called 'un-inspired' literature (a misnomer, I hold: if Shakespeare was not inspired, one may well doubt if any man ever was), that will bear the process of being pondered over, a hundred times: still there *are* such passages—enough, I think, to make a goodly store for the memory.

These two books—of sacred, and secular, passages for memory—will serve other good purposes besides merely occupying vacant hours: they will help to keep at bay many anxious thoughts, worrying thoughts, uncharitable thoughts, unholy thoughts. Let me say this, in better words than my own, by copying a passage from that most interesting book, Robertson's Lectures on the Epistles to the Corinthians, Lecture XLIX. "If a man finds himself haunted by evil desires and unholy images, which will generally be at periodical hours, let him commit to memory passages of Scripture, or passages from the best writers in verse or prose. Let him store his mind with these, as safe-guards to repeat

Quoted from
*Expository lectures on
St. Paul's Epistles to
the Corinthians* by
Frederick William
Robertson

when he lies awake in some restless night, or when despairing imaginations, or gloomy, suicidal thoughts, beset him. Let these be to him the sword, turning everywhere to keep the way of the Garden of Life from the intrusion of profaner footsteps.”

Fourthly, a “Shakespeare” for girls: that is, an edition in which everything, not suitable for the perusal of girls of (say) from 10 to 17, should be omitted. Few children under 10 would be likely to understand or enjoy the greatest of poets: and those, who have passed out of girlhood, may safely be left to read Shakespeare, in any edition, ‘expurgated’ or not, that they may prefer: but it seems a pity that so many children, in the intermediate stage, should be debarred from a great pleasure for want of an edition suitable to them. Neither Bowdler’s, Chambers’s, Brandram’s, nor Cundell’s ‘Boudoir’ Shakespeare, seems to me to meet the want: they are not sufficiently ‘expurgated.’ Bowdler’s is the most extraordinary of all: looking through it, I am filled with a deep sense of wonder, considering what he has left in, that he should have cut *anything* out! Besides relentlessly erasing all that is unsuitable on the score of reverence or decency, I should be inclined to omit also all that seems too difficult, or not likely to interest young readers. The resulting book might be slightly fragmentary: but it would be a real treasure to all British maidens who have any taste for poetry.

If it be needful to apologize to any one for the new departure I have taken in this story—by introducing, along with what will, I hope, prove to be acceptable nonsense for children, some of the graver thoughts of human life—it must be to one who has learned the Art of keeping such thoughts wholly at a distance in hours of mirth and careless ease. To him such a mixture will seem, no doubt, ill-judged and repulsive. And that such an Art *exists* I do not dispute: with youth, good health, and sufficient money, it seems quite possible to lead, for years together, a life of unmixed gaiety—with the exception of one solemn fact, with which we are liable to be confronted at *any* moment, even in the midst of the most brilliant company or the most sparkling entertainment. A man may fix his own times for admitting serious thought, for attending public worship, for prayer, for reading the Bible: all such matters he can defer to that ‘convenient season’, which is so apt never to occur at all: but he cannot defer, for one single moment, the necessity of attending to a message, which may come before he has finished reading this page, ‘*this night shall thy soul be required of thee.*’

Quoted from Luke
12:20

The ever-present sense of this grim possibility has been, in all ages,³ an incubus that men have striven to shake off. Few more interesting subjects of enquiry could be found, by a student of history, than the various weapons that have been used against this shadowy foe. Saddest of all must have been the thoughts of those who saw indeed an *existence* beyond the grave, but an existence far more terrible than annihilation—an existence as filmy, impalpable, all but invisible spectres, drifting about, through endless ages, in a world of shadows, with nothing to do, nothing to hope for, nothing to love! In the midst of the gay verses of that genial ‘bon vivant’ Horace, there stands one dreary word whose utter sadness goes to one’s heart. It is the word ‘*exilium*’ in the well-known passage

Omnes eodem cogimur, omnium

Quoted from *Ode to
Dellius* by Horace

³At the moment, when I had written these words, there was a knock at the door, and a

*Versatur urnâ serius ocius
Sors exitura et nos in æternum
Exilium impositura cymbæ.*

Yes, to him this present life—spite of all its weariness and all its sorrow—was the only life worth having: all else was ‘exile’! Does it not seem almost incredible that one, holding such a creed, should ever have smiled?

And many in this day, I fear, even though believing in an existence beyond the grave far more real than Horace ever dreamed of, yet regard it as a sort of ‘exile’ from all the joys of life, and so adopt Horace’s theory, and say ‘let us eat and drink, for to-morrow we die.’

Quoted from 1
Corinthians 15:32

We go to entertainments, such as the theatre—I say ‘we’, for *I* also go to the play, whenever I get a chance of seeing a really good one—and keep at arm’s length, if possible, the thought that we may not return alive. Yet how do you know—dear friend, whose patience has carried you through this garrulous preface—that it may not be *your* lot, when mirth is fastest and most furious, to feel the sharp pang, or the deadly faintness, which heralds the final crisis—to see, with vague wonder, anxious friends bending over you—to hear their troubled whispers—perhaps yourself to shape the question, with trembling lips, “Is it serious?”, and to be told “Yes: the end is near” (and oh, how different all Life will look when those words are said!)—how do you know, I say, that all this may not happen to *you*, this night?

And *dare* you, knowing this, say to yourself “Well, perhaps it *is* an immoral play: perhaps the situations *are* a little too ‘risky’, the dialogue a little too strong, the ‘business’ a little too suggestive. I don’t say that conscience is *quite* easy: but the piece is so clever, I must see it this once! I’ll begin a stricter life to-morrow.” *To-morrow, and to-morrow, and to-morrow!*

*“Who sins in hope, who, sinning, says,
‘Sorrow for sin God’s judgement stays!’
Against God’s Spirit he lies; quite stops
Mercy with insult; dares, and drops,
Like a scorch’d fly, that spins in vain
Upon the axis of its pain,
Then takes its doom, to limp and crawl,
Blind and forgot, from fall to fall.”*

Quoted from *The
Scorched Fly* by
Coventry Patmore

Let me pause for a moment to say that I believe this thought, of the possibility of death—if calmly realised, and steadily faced—would be one of the best possible tests as to our going to any scene of amusement being right or wrong. If the thought of sudden death acquires, for *you*, a special horror when imagined as happening in a *theatre*, then be very sure the theatre is harmful for *you*, however harmless it may be for others; and that *you* are incurring a deadly peril in going. Be sure the safest rule is that we should not dare to *live* in any scene in which we dare not *die*.

But, once realise what the true object *is* in life—that it is *not* pleasure, *not* knowledge, *not* even fame itself, ‘that last infirmity of noble minds’—but that it *is* the development of *character*, the rising to a higher, nobler, purer standard, the building-up of the perfect *Man*—and then, so long as we feel that this is

Quoted from *Lycidas*
by John Milton

telegram was brought me, announcing the sudden death of a dear friend.

going on, and will (we trust) go on for evermore, death has for us no terror; it is not a shadow, but a light; not an end, but a beginning!

One other matter may perhaps seem to call for apology—that I should have treated with such entire want of sympathy the British passion for ‘Sport’, which no doubt has been in by-gone days, and is still, in some forms of it, an excellent school for hardihood and for coolness in moments of danger. But I am not entirely without sympathy for *genuine* ‘Sport’: I can heartily admire the courage of the man who, with severe bodily toil, and at the risk of his life, hunts down some ‘man-eating’ tiger: and I can heartily sympathize with him when he exults in the glorious excitement of the chase and the hand-to-hand struggle with the monster brought to bay. But I can but look with deep wonder and sorrow on the hunter who, at his ease and in safety, can find pleasure in what involves, for some defenceless creature, wild terror and a death of agony: deeper, if the hunter be one who has pledged himself to preach to men the Religion of universal Love: deepest of all, if it be one of those ‘*tender and delicate*’ beings, whose very name serves as a symbol of Love—‘*thy love to me was wonderful, passing the love of women*’—whose mission here is surely to help and comfort all that are in pain or sorrow!

Quoted from
Deuteronomy 28:56
Quoted from 2
Samuel 1:26

*‘Farewell, farewell! but this I tell
To thee, thou Wedding-Guest!
He prayeth well, who loveth well
Both man and bird and beast.
He prayeth best, who loveth best
All things both great and small;
For the dear God who loveth us,
He made and loveth all.’*

Quoted from *The
Rime of the Ancient
Mariner* by Samuel
Coleridge

19.13 Sylvie and Bruno (St. James's Gazette)

Source: St. James's Gazette, January 10, 1890

To the EDITOR of the ST. JAMES'S GAZETTE

SIR,—You will, I believe, be doing a kindness to many readers of this book, who have found difficulties, unforeseen by me, in the sudden changes of scene, and the introduction into real life of what they suppose to be “dream-children,” if you will allow me space to explain that the book is written on the theory of the actual existence of fairies, and of their being able to assume human form. The “I” of the story goes through three different stages of being, (1) real life, (2) the “eerie” stage, in which he can see fairies, (3) trance, in which, while his body remains apparently asleep, his spirit is free to pass into fairyland and witness what is going on there at the moment. There are no “dreams” in the book: the many imitations, that have appeared, of my two “dream-stories,” have effectually barred me from any further attempt to write fiction of that kind.—I am, Sir, your obedient servant,

Lewis Carroll.

January 9.

19.14 Sylvie and Bruno Concluded

Source: Sylvie and Bruno Concluded

I must begin with the same announcement as in the previous Volume (which I shall henceforward refer to as “Vol. I.,” calling the present Volume “Vol. II.”), viz. that the Locket, at p. 607, was drawn by ‘Miss Alice Havers.’ And my reason, for not stating this on the title-page—that it seems only due, to the artist of these wonderful pictures, that his name should stand there alone—has, I think, even greater weight in Vol. II. than it had in Vol. I. Let me call especial attention to the three “Little Birds” borders, at pp. 588, 592, 596. The way, in which he has managed to introduce the most minute details of the stanzas to be illustrated, seems to me a triumph of artistic ingenuity.

Let me here express my sincere gratitude to the many Reviewers who have noticed, whether favorably or unfavorably, the previous Volume. Their unfavorable remarks were, most probably, well-deserved; the favorable ones less probably so. Both kinds have no doubt served to make the book known, and have helped the reading Public to form their opinions of it. Let me also here assure them that it is not from any want of respect for their criticisms, that I have carefully forborne from reading *any* of them. I am strongly of opinion that an author had far better *not* read any reviews of his books: the unfavorable ones are almost certain to make him cross, and the favorable ones conceited; and *neither* of these results is desirable.

Criticisms have, however, reached me from private sources, to some of which I propose to offer a reply.

One such critic complains that Arthur’s strictures, on sermons and on choristers, are too severe. Let me say, in reply, that I do *not* hold myself responsible for *any* of the opinions expressed by the characters in my book. They are simply opinions which, it seemed to me, might probably be held by the persons into whose mouths I put them, and which were worth consideration.

Other critics have objected to certain innovations in spelling, such as “ca’n’t,” “wo’n’t,” “traveler.” In reply, I can only plead my firm conviction that the popular usage is *wrong*. As to “ca’n’t,” it will not be disputed that, in all *other* words ending in “n’t,” these letters are an abbreviation of “not”; and it is surely absurd to suppose that, in this solitary instance, “not” is represented by “t”! In fact “can’t” is the *proper* abbreviation for “can it,” just as “is’t” is for “is it.” Again, in “wo’n’t,” the first apostrophe is needed, because the word “would” is here *abridged* into “wo”: but I hold it proper to spell “don’t” with only *one* apostrophe, because the word “do” is here *complete*. As to such words as “traveler,” I hold the correct principle to be, to *double* the consonant when the accent falls on that syllable; otherwise to leave it *single*. This rule is observed in most cases

(e. g. we double the “r” in “preferred,” but leave it single in “offered”), so that I am only extending, to other cases, an existing rule. I admit, however, that I do not spell “parallel,” as the rule would have it; but here we are constrained, by the etymology, to insert the double “l”.

In the Preface to Vol. I. were two puzzles, on which my readers might exercise their ingenuity. One was, to detect the 2 lines of “padding,” which I had found it necessary to supply in the passage extending from the top of p. 339 to the top of p. 340. They are the lines 42 to 42 of p. 339. The other puzzle was, to determine which (if any) of the 8 stanzas of the Gardener’s Song (see pp. 349, 355, 357, 359, 364, 369, 387, 389) were adapted to the context, and which (if any) had the context adapted to them. The last of them is the only one that was adapted to the context, the “Garden-Door that opened with a key” having been substituted for some creature (a Cormorant, I think) “that nestled in a tree.” At pp. 355, 364, and 387, the context was adapted to the stanza. At p. 359, neither stanza nor context was altered: the connection between them was simply a piece of good luck.

In the Preface to Vol. I., at p. 2472, I gave an account of the making-up of the story of “Sylvie and Bruno.” A few more details may perhaps be acceptable to my Readers.

It was in 1873, as I *now* believe, that the idea first occurred to me that a little fairy-tale (written, in 1867, for “Aunt Judy’s Magazine,” under the title “Bruno’s Revenge”¹) might serve as the nucleus of a longer story. This I surmise, from having found the original draft of the last paragraph of Vol. II., dated 1873. So that this paragraph has been waiting 20 years for its chance of emerging into print—more than twice the period so cautiously recommended by Horace for ‘repressing’ one’s literary efforts!

It was in February, 1885, that I entered into negotiations, with Mr. Harry Furniss, for illustrating the book. Most of the substance of *both* Volumes was then in existence in manuscript: and my original intention was to publish the *whole* story at once. In September, 1885, I received from Mr. Furniss the first set of drawings—the four which illustrate “Peter and Paul” (see I. pp. 378, 380, 382, 384): in November, 1886, I received the second set—the three which illustrate the Professor’s song about the “little man” who had “a little gun” (Vol. II. pp. 553, 554, 554): and in January, 1887, I received the third set—the four which illustrate the “Pig-Tale.”

So we went on, illustrating first one bit of the story, and then another, without any idea of sequence. And it was not till March, 1889, that, having calculated the number of pages the story would occupy, I decided on dividing it into *two* portions, and publishing it half at a time. This necessitated the writing of a *sort* of conclusion for the first Volume: and *most* of my Readers, I fancy, regarded this as the *actual* conclusion, when that Volume appeared in December, 1889. At any rate, among all the letters I received about it, there was only *one* which expressed *any* suspicion that it was not a *final* conclusion. This letter was from a child. She wrote “we were so glad, when we came to the end of the book, to find that there was no ending-up, for that shows us that you are going to write a sequel.”

It may interest some of my Readers to know the *theory* on which this story is constructed. It is an attempt to show what might *possibly* happen, supposing

¹Remark: → 3.11, p. 667

that Fairies really existed; and that they were sometimes visible to us, and we to them; and that they were sometimes able to assume human form: and supposing, also, that human beings might sometimes become conscious of what goes on in the Fairy-world—by actual transference of their immaterial essence, such as we meet with in ‘Esoteric Buddhism.’

I have supposed a Human being to be capable of various psychical states, with varying degrees of consciousness, as follows:—

- (a) the ordinary state, with no consciousness of the presence of Fairies;
- (b) the ‘eerie’ state, in which, while conscious of actual surroundings, he is *also* conscious of the presence of Fairies;
- (c) a form of trance, in which, while *unconscious* of actual surroundings, and apparently asleep, he (i. e. his immaterial essence) migrates to other scenes, in the actual world, or in Fairyland, and is conscious of the presence of Fairies.

I have also supposed a Fairy to be capable of migrating from Fairyland into the actual world, and of assuming, at pleasure, a Human form; and also to be capable of various psychical states, viz.

- (a) the ordinary state, with no consciousness of the presence of Human beings;
- (b) a sort of ‘eerie’ state, in which he is conscious, if in the actual world, of the presence of actual Human beings; if in Fairyland, of the presence of the immaterial essences of Human beings.

I will here tabulate the passages, in both Volumes, where abnormal states occur.

Vol. I.	Historian's Locality and State.		Other characters.

351–399	do.	<i>c</i>	
407–end.	do.	<i>b</i>	

In the Preface to Vol. I., at p. 2472, I gave an account of the *origination* of some of the ideas embodied in the book. A few more such details may perhaps interest my Readers:—

I. p. 400. The very peculiar use, here made of a dead mouse, comes from real life. I once found two very small boys, in a garden, playing a microscopic game of ‘Single-Wicket.’ The bat was, I think, about the size of a table-spoon; and the utmost distance attained by the ball, in its most daring flights, was some 4 or 5 yards. The *exact* length was of course a matter of *supreme* importance; and it was always carefully measured out (the batsman and the bowler amicably sharing the toil) with a dead mouse!

II. p. 419. The two quasi-mathematical Axioms, quoted by Arthur at p. 419 of Vol. I., (“Things that are greater than the same are greater than one another,” and “All angles are equal”) were actually enunciated, in all seriousness, by undergraduates at a University situated not 100 miles from Ely.

II. p. 470. Bruno’s remark (“I can, if I like, &c.”) was actually made by a little boy.

II. p. 470. So also was his remark (“I know what it *doesn't* spell.”) And his remark (“I just twiddled my eyes, &c.”) I heard from the lips of a little girl, who had just solved a puzzle I had set her.

II. p. 485. Bruno's soliloquy ("For its father, &c.") was actually spoken by a little girl, looking out of the window of a railway-carriage.

II. p. 511. The remark, made by a guest at the dinner-party, when asking for a dish of fruit ("I've been wishing for them, &c.") I heard made by the great Poet-Laureate, whose loss the whole reading-world has so lately had to deplore.

II. p. 518. Bruno's speech, on the subject of the age of 'Mein Herr,' embodies the reply of a little girl to the question "Is your grandmother an *old* lady?" "I don't know if she's an *old* lady," said this cautious young person; "she's *eighty-three*."

II. p. 533. The speech about 'Obstruction' is no mere creature of my imagination! It is copied *verbatim* from the columns of the Standard, and was spoken by Sir William Harcourt, who was, at the time, a member of the 'Opposition,' at the 'National Liberal Club,' on July the 16th, 1890.

II. p. 576. The Professor's remark, about a dog's tail, that "it doesn't bite at *that* end," was actually made by a child, when warned of the danger he was incurring by pulling the dog's tail.

II. p. 594. The dialogue between Sylvie and Bruno, which occupies lines 15 to 20, is a *verbatim* report (merely substituting "cake" for "penny") of a dialogue overheard between two children.

One story in this Volume—"Bruno's Picnic"—I can vouch for as suitable for telling to children, having tested it again and again; and, whether my audience has been a dozen little girls in a village-school, or some thirty or forty in a London drawing-room, or a hundred in a High School, I have always found them earnestly attentive, and keenly appreciative of such fun as the story supplied.

May I take this opportunity of calling attention to what I flatter myself was a successful piece of name-coining, at p. 341 of Vol. I. Does not the name 'Sibimet' fairly embody the character of the Sub-Warden? The gentle Reader has no doubt observed what a singularly useless article in a house a brazen trumpet is, if you simply leave it lying about, and never blow it!

Readers of the first Volume, who have amused themselves by trying to solve the two puzzles propounded at p. 2473 of the Preface, may perhaps like to exercise their ingenuity in discovering which (if any) of the following parallelisms were intentional, and which (if any) accidental.

"Little Birds."	Events, and Persons.
Stanza	1. Banquet.
	2. Chancellor.
	3. Empress and Spinach (II. 575).
	4. Warden's Return.
	5. Professor's Lecture (II. 579).
	6. Other Professor's song (I. 376).
	7. Petting of Uggug.
	8. Baron Doppelgeist.
	9. Jester and Bear (I. 370). Little Foxes.
	10. Bruno's Dinner-Bell; Little Foxes.

I will publish the answer to this puzzle in the Preface to a little book of "Original Games and Puzzles," now in course of preparation.

I have reserved, for the last, one or two rather more serious topics.

I had intended, in this Preface, to discuss more fully, than I had done in the previous Volume, the 'Morality of Sport', with special reference to letters

I have received from lovers of Sport, in which they point out the many great advantages which men get from it, and try to prove that the suffering, which it inflicts on animals, is too trivial to be regarded.

But, when I came to think the subject out, and to arrange the whole of the arguments 'pro' and 'con', I found it much too large for treatment here. Some day, I hope to publish an essay on this subject. At present, I will content myself with stating the net result I have arrived at.

It is, that God has given to Man an absolute right to take the *lives* of other animals, for *any* reasonable cause, such as the supply of food: but that He has *not* given to Man the right to inflict *pain*, unless when *necessary*: that mere pleasure, or advantage, does not constitute such a necessity: and, consequently, that pain, inflicted for the purposes of *Sport*, is cruel, and therefore wrong. But I find it a far more complex question than I had supposed; and that the 'case', on the side of the Sportsman, is a much stronger one than I had supposed. So, for the present, I say no more about it.

Objections have been raised to the severe language I have put into the mouth of 'Arthur', at p. 424, on the subject of 'Sermons,' and at p. 423, on the subjects of Choral Services and 'Choristers.'

I have already protested against the assumption that I am ready to endorse the opinions of characters in my story. But, in these two instances, I admit that I am much in sympathy with 'Arthur.' In my opinion, far too many sermons are expected from our preachers; and, as a consequence, a great many are preached, which are not worth listening to; and, as a consequence of *that*, we are very apt *not* to listen. The reader of this paragraph probably heard a sermon last Sunday morning? Well, let him, if he can, name the text, and state how the preacher treated it!

Then, as to 'Choristers,' and all the other accessories—of music, vestments, processions, &c.,—which have come, along with them, into fashion—while freely admitting that the 'Ritual' movement was sorely needed, and that it has effected a vast improvement in our Church-Services, which had become dead and dry to the last degree, I hold that, like many other desirable movements, it has gone too far in the opposite direction, and has introduced many new dangers.

For the Congregation this new movement involves the danger of learning to think that the Services are done *for* them; and that their bodily *presence* is all they need contribute. And, for Clergy and Congregation alike, it involves the danger of regarding these elaborate Services as *ends in themselves*, and of forgetting that they are simply *means*, and the very hollowest of mockeries, unless they bear fruit in our *lives*.

For the Choristers it seems to involve the danger of self-conceit, as described at p. 423 (N.B. "stagy-entrances" is a misprint for "stage-entrances"), the danger of regarding those parts of the Service, where their help is not required, as not worth attending to, the danger of coming to regard the Service as a mere outward form—a series of postures to be assumed, and of words to be said or sung, while the *thoughts* are elsewhere—and the danger of 'familiarity' breeding 'contempt' for sacred things.

Let me illustrate these last two forms of danger, from my own experience. Not long ago, I attended a Cathedral-Service, and was placed immediately behind a row of men, members of the Choir; and I could not help noticing that they treated the *Lessons* as a part of the Service to which they needed not to

give *any* attention, and as affording them a convenient opportunity for arranging music-books, &c., &c. Also I have frequently seen a row of little choristers, after marching in procession to their places, kneel down, as if about to pray, and rise from their knees after a minute spent in looking about them, it being but too evident that the attitude was a mere mockery. Surely it is very dangerous, for these children, to thus accustom them to *pretend* to pray? As an instance of irreverent treatment of holy things, I will mention a custom, which no doubt many of my readers have noticed in Churches where the Clergy and Choir enter in procession, viz. that, at the end of the private devotions, which are carried on in the vestry, and which are of course inaudible to the Congregation, the final “Amen” is *shouted*, loud enough to be heard all through the Church. This serves as a signal, to the Congregation, to prepare to rise when the procession appears: and it admits of no dispute that it is for this purpose that it is thus shouted. When we remember to Whom that “Amen” is *really* addressed, and consider that it is here *used* for the same purpose as one of the Church-bells, we must surely admit that it is a piece of gross irreverence? To *me* it is much as if I were to see a Bible used as a footstool.

As an instance of the dangers, for the Clergy themselves, introduced by this new movement, let me mention the fact that, according to *my* experience, Clergymen of this school are *specially* apt to retail comic anecdotes, in which the most sacred names and words—sometimes actual texts from the Bible—are used as themes for jesting. Many such things are repeated as having been originally said by *children*, whose utter ignorance of evil must no doubt acquit *them*, in the sight of God, of all blame; but it must be otherwise for those who *consciously* use such innocent utterances as material for their unholy mirth.

Let me add, however, *most* earnestly, that I fully believe that this profanity is, in many cases, *unconscious*: the ‘environment’ (as I have tried to explain at p. 507) makes all the difference between man and man; and I rejoice to think that many of these profane stories—which *I* find so painful to listen to, and should feel it a sin to repeat—give to *their* ears no pain, and to *their* consciences no shock; and that *they* can utter, not less sincerely than myself, the two prayers, “*Hallowed be Thy Name,*” and “*from hardness of heart, and contempt of Thy Word and Commandment, Good Lord, deliver us!*” To which I would desire to add, for their sake and for my own, Keble’s beautiful petition, “*help us, this and every day, To live more nearly as we pray!*” It is, in fact, for its *consequences*—for the grave dangers, both to speaker and to hearer, which it involves—rather than for what it is *in itself*, that I mourn over this clerical habit of profanity in social talk. To the *believing* hearer it brings the danger of loss of reverence for holy things, by the mere act of listening to, and enjoying, such jests; and also the temptation to retail them for the amusement of others. To the *unbelieving* hearer it brings a welcome confirmation of his theory that religion is a fable, in the spectacle of its accredited champions thus betraying their trust. And to the speaker himself it must surely bring the danger of *loss of faith*. For surely such jests, if uttered with no consciousness of harm, must necessarily be also uttered with no consciousness, at the moment, of the *reality* of God, as a *living being*, who hears all we say. And he, who allows himself the habit of thus uttering holy words, with no thought of their meaning, is but too likely to find that, for him, God has become a myth, and heaven a poetic fancy—that, for him, the light of life is gone, and that he is at heart an atheist, lost in “*a darkness that may be felt.*”

Quoted from Lord’s Prayer

Quoted from *Book of Common Prayer, The Litany*

Quoted from *Hues of the Rich Unfolding Morn (The Christian Year, 1827)* by John Keble

Quoted from Exodus 10:21

There is, I fear, at the present time, an increasing tendency to irreverent treatment of the name of God and of subjects connected with religion. Some of our theatres are helping this downward movement by the gross caricatures of clergymen which they put upon the stage: some of our clergy are themselves helping it, by showing that they can lay aside the spirit of reverence, along with their surplices, and can treat as jests, when *outside* their churches, names and things to which they pay an almost superstitious veneration when *inside*: the "Salvation Army" has, I fear, with the best intentions, done much to help it, by the coarse familiarity with which they treat holy things: and surely every one, who desires to *live* in the spirit of the prayer "*Hallowed be thy Name,*" ought to do what he can, however little that may be, to check it. So I have gladly taken this unique opportunity, however unfit the topic may seem for the Preface to a book of this kind, to express some thoughts which have weighed on my mind for a long time. I did not expect, when I wrote the Preface to Vol. I, that it would be read to any appreciable extent: but I rejoice to believe, from evidence that has reached me, that it *has* been read by many, and to hope that this Preface will also be so: and I think that, among them, some will be found ready to sympathise with the views I have put forwards, and ready to help, with their prayers and their example, the revival, in Society, of the waning spirit of reverence.

19.15 Phantasmagoria and Other Poems

Source: Phantasmagoria

[Of the following poems, *Phantasmagoria*, *A Valentine*, *A Double Acrostic*, *The Valley of the Shadow of Death*, *Lines*, *Stanzas for Music*, and *Christmas Greetings*, are here printed for the first time. The others have all appeared before in magazines and other periodicals, with the exception of *The Elections to the Hebdomadal Council*, which was published by itself.

The decorations on the cover represent the *Crab Nebula* in *Taurus* and *Donati's Comet*, two distinguished members of the Celestial Phantasmagoria.]

19.16 The Hunting of the Snark

Source: The Hunting of the Snark (with different punctuation and cover images);
Rhyme? and Reason?

(Cover)

(later variant cover ornament)

If—and the thing is wildly possible—the charge of writing nonsense were ever brought against the author of this brief but instructive poem, it would be based, I feel convinced, on the line (in p. 2185)

“Then the bowsprit got mixed with the rudder sometimes:”

In view of this painful possibility, I will not (as I might) appeal indignantly to my other writings as a proof that I am incapable of such a deed: I will not (as I might) point to the strong moral purpose of this poem itself, to the arithmetical principles so cautiously inculcated in it, or to its noble teachings in *Natural History*—I will take the more prosaic course of simply explaining how it happened.

The Bellman, who was almost morbidly sensitive about appearances, used to have the bowsprit unshipped once or twice a week to be revarnished; and it more than once happened, when the time came for replacing it, that no one on board could remember which end of the ship it belonged to. They knew it was not of the slightest use to appeal to the Bellman about it—he would only refer to his Naval Code, and read out in pathetic tones Admiralty Instructions which none of them had ever been able to understand—so it generally ended in its being fastened on, anyhow, across the rudder. The helmsman¹ used to stand by with tears in his eyes: *he* knew it was all wrong, but alas! Rule 42 of the Code, “*No one shall speak to the Man at the Helm,*” had been completed by the Bellman himself with the words “*and the Man at the Helm shall speak to no one.*” So remonstrance was impossible, and no steering could be done till the next varnishing day. During these bewildering intervals the ship usually sailed backwards.

As this poem is to some extent connected with the lay of the Jabberwock, let me take this opportunity of answering a question that has often been asked me, how to pronounce “slithy toves.” The “i” in “slithy” is long, as in “writhe”; and “toves” is pronounced so as to rhyme with “groves.” Again, the first “o” in “borogoves” is pronounced like the “o” in “borrow.” I have heard people try to give it the sound of the “o” in “worry.” Such is Human Perversity.

This also seems a fitting occasion to notice the other hard words in that poem. Humpty-Dumpty’s theory, of two meanings packed into one word like a portmanteau, seems to me the right explanation for all.

For instance, take the two words “fuming” and “furious.” Make up your mind that you will say both words, but leave it unsettled which you will say first. Now open your mouth and speak. If your thoughts incline ever so little towards “fuming,” you will say “fuming-furious”; if they turn, by even a hair’s breadth, towards “furious,” you will say “furious-fuming”; but if you have that rarest of gifts, a perfectly balanced mind, you will say “frumious.”

Supposing that, when Pistol uttered the well-known words—

“Under which king, Bezonian? Speak or die!”

Justice Shallow had felt certain that it was either William or Richard, but had not been able to settle which, so that he could not possibly say either name before the other, can it be doubted that, rather than die, he would have gasped out “Rilchiam!”

Quoted from *Henry IV, Part II* by William Shakespeare

¹This office was usually undertaken by the Boots, who found in it a refuge from the Baker’s constant complaints about the insufficient blacking of his three pair of boots.

19.17 Rhyme? and Reason?

Source: Rhyme? and Reason? (originally only the following untitled note appeared, later it was replaced by the preface)

I have had nor rhyme nor reason

[Of the following poems, ECHOES, A GAME OF FIVES, the last three of the FOUR RIDDLES, and FAME'S PENNY-TRUMPET, are here published for the first time. The others have all appeared before, as have also the illustrations to THE HUNTING OF THE SNARK.]

Preface to Fourth Thousand.

Most of the poems, included in this collection (first published, in 1883), had been previously published, as follows:—

TÉMA CON VARIAZIÓNİ had appeared, in THE COMIC TIMES, in 1855: Y^E CARPETTE KNYGHTE and THE THREE VOICES, in THE TRAIN, in 1856: HI-AWATHA'S PHOTOGRAPHING, in the same, in 1858: A SEA DIRGE, in COLLEGE RHYMES, in 1861: MELANCHOLETTA and POETA FIT, NON NASCITUR, in the same, in 1862: THE LANG COORTIN' and SIZE AND TEARS, in the same, in 1863: ATALANTA IN CAMDEN TOWN, in PUNCH, in 1867.

All the above, except the first, were republished, with the addition of PHANTASMAGORIA, A VALENTINE, and A DOUBLE ACROSTIC (the first of the FOUR RIDDLES in this volume), in the collection entitled PHANTASMAGORIA AND OTHER POEMS, first published in 1869.

THE HUNTING OF THE SNARK first appeared, with the present illustrations, in 1876.

The other illustrations in this volume first appeared in 1883.

December, 1887.

19.18 Three Sunsets and Other Poems

Source: Three Sunsets

Nearly the whole of this volume is a reprint of the serious portion of *Phantasmagoria and other Poems*, which was first published in 1869 and has long been out of print. "The Path of Roses" was written soon after the Crimean War, when the name of Florence Nightingale had already become a household-word. "Only a Woman's Hair" was suggested by a circumstance mentioned in *The Life of Dean Swift*, viz., that, after his death, a small packet was found among his papers, containing a single lock of hair and inscribed with those words. "After Three Days" was written after seeing Holman Hunt's picture, *The Finding of Christ in the Temple*.

The two poems, "Far Away" and "A Song of Love", are reprinted from *Sylvie and Bruno* and *Sylvie and Bruno Concluded*, books whose high price (made necessary by the great cost of production) has, I fear, put them out of the reach of most of my readers. "A Lesson in Latin" is reprinted from *The Jabberwock*, a Magazine got up among the Members of "The Girls' Latin School, Boston, U.S.A." The only poems, here printed for the first time, are put together under the title of "Puck Lost and Found," having been inscribed in two books—*Fairies*, a poem by Allingham, illustrated by Miss E. Gertrude Thomson, and *Merry Elves*, a story-book, by whom written I do not know, illustrated by C. O. Murray—which were presented to a little girl and boy, as a sort of memento of a visit paid by them to the author one day, on which occasion he taught them the pastime—dear to the hearts of children—of folding paper—"pistols," which can be made to imitate, fairly well, the noise of a real one.

19.19 Euclid and his Modern Rivals

Source: Euclid and his Modern Rivals, second edition

‘All for your delight
We are not here. *That you should here repent you*
The actors are at hand; and, by their show,
You shall know all, that you are like to know.’

Quoted from *A
Midsummer Night’s
Dream* by William
Shakespeare

Preface to Second Edition

The only new features, worth mentioning, in the second edition, are the substitution of words for the symbols introduced in the first edition, and one additional review—of Mr. Henrici, to whom, if it should appear to him that I have at all exceeded the limits of fair criticism, I beg to tender my sincerest apologies.

C. L. D.
Ch. Ch. 1885.

Preface to First Edition

*‘ridentem dicere verum
Quid vetat?’*

Quoted from Horace

The object of this little book is to furnish evidence, first, that it is essential, for the purpose of teaching or examining in elementary Geometry, to employ one text-book only; secondly, that there are strong *a priori* reasons for retaining, in all its main features, and specially in its sequence and numbering of Propositions and in its treatment of Parallels, the Manual of Euclid; and thirdly, that no sufficient reasons have yet been shown for abandoning it in favour of any one of the modern Manuals which have been offered as substitutes.

It is presented in a dramatic form, partly because it seemed a better way of exhibiting in alternation the arguments on the two sides of the question; partly that I might feel myself at liberty to treat it in a rather lighter style than would have suited an essay, and thus to make it a little less tedious and a little more acceptable to unscientific readers.

In one respect this book is an experiment, and may chance to prove a failure: I mean that I have not thought it necessary to maintain throughout the gravity of style which scientific writers usually affect, and which has somehow come to be regarded as an ‘inseparable accident’ of scientific teaching. I never could quite see the reasonableness of this immemorial law: subjects there are, no doubt, which are in their essence too serious to admit of any lightness of treatment—but I cannot recognise Geometry as one of them. Nevertheless it will, I trust, be found that I have permitted myself a glimpse of the comic side of things only at fitting seasons, when the tired reader might well crave a moment’s breathing-space, and not on any occasion where it could endanger the continuity of a line of argument.

Pitying friends have warned me of the fate upon which I am rushing: they have predicted that, in thus abandoning the dignity of a scientific writer, I shall alienate the sympathies of all true scientific readers, who will regard the book

as a mere *jeu d'esprit*, and will not trouble themselves to look for any serious argument in it. But it must be borne in mind that, if there is a Scylla before me, there is also a Charybdis—and that, in my fear of being read as a jest, I may incur the darker destiny of not being read at all.

In furtherance of the great cause which I have at heart—the vindication of Euclid's masterpiece—I am content to run some risk; thinking it far better that the purchaser of this little book should *read* it, though it be with a smile, than that, with the deepest conviction of its seriousness of purpose, he should leave it unopened on the shelf.

To all the authors, who are here reviewed, I beg to tender my sincerest apologies, if I shall be found to have transgressed, in any instance, the limits of fair criticism. To Mr. Wilson especially such apology is due—partly because I have criticised his book at great length and with no sparing hand—partly because it may well be deemed an impertinence in one, whose line of study has been chiefly in the lower branches of Mathematics, to dare to pronounce any opinion at all on the work of a Senior Wrangler. Nor should I thus dare, if it entailed my following him up 'yonder mountain height' which *he* has scaled, but which *I* can only gaze at from a distance: it is only when he ceases 'to move so near the heavens,' and comes down into the lower regions of Elementary Geometry, which I have been teaching for nearly five-and-twenty years, that I feel sufficiently familiar with the matter in hand to venture to speak.

Let me take this opportunity of expressing my gratitude, first to Mr. Todhunter, for allowing me to quote *ad libitum* from the very interesting Essay on Elementary Geometry, which is included in his volume entitled 'The Conflict of Studies, and other Essays on subjects connected with Education,' and also to reproduce some of the beautiful diagrams from his edition of Euclid; secondly, to the Editor of the Athenæum, for giving me a similar permission with regard to a review of Mr. Wilson's Geometry, written by the late Professor De Morgan, which appeared in that journal, July 18, 1868.

Quoted from *The Princess* by Alfred Lord Tennyson

19.20 Supplement to “Euclid and his Modern Rivals”

Source: Supplement to “Euclid and his Modern Rivals”

This supplement is paged continuously with ‘Euclid and his Modern Rivals,’ to suit the convenience of those who possess the volume. For those who do not possess it, it may be well to explain that the speakers are ‘Minos’ (a University examiner who has been commissioned by the ghost of Euclid to criticize the works of his Modern Rivals), and ‘Herr Niemand’ (a ghostly German Professor who appears as counsel for the authors criticized). Thirteen such books have been already discussed, namely, Legendre—the American writers, Chauvenet, Loomis, and Pierce—the English writers, Cooley, Cuthbertson, Morell, Reynolds, Willock, Wilson, and Wright—and the Syllabus put forth by ‘The Association for the Improvement of Geometrical Teaching,’ together with Wilson’s book founded on that Syllabus; so that M. Henrici fills the *rôle* of that popular functionary, dear to Parisian diners, ‘*le quatorzième*.’

19.21 A Tangled Tale

Source: A Tangled Tale

Hoc meum tale quale est accipe.

This Tale originally appeared as a serial in *The Monthly Packet*, beginning in April, 1880. The writer's intention was to embody in each Knot (like the medicine so dexterously, but ineffectually, concealed in the jam of our early childhood) one or more mathematical questions—in Arithmetic, Algebra, or Geometry, as the case might be—for the amusement, and possible edification, of the fair readers of that Magazine.

19.22 Limits of Circle-Squaring

Source: manuscript for unpublished book, 1882

April 20, 1882

Suppose that a controversy had arisen about the details of the battle of Waterloo, and that in a certain Debating Society the question had been raised as to the exact time when Bulow's Prussian Corps appeared on the field of battle. Disputants, who supported the theory that it was a little before 6 p. m., or a little after, would no doubt be patiently listened to: but what would the Society say to a member who proposed that it took place at 4 p. m. on the *nineteenth* of June? Would they not exclaim with one voice, 'If there is one fact in History more certain than another, it is that the battle was fought on the *eighteenth*. To go outside the limits of that day is simply absurd. We cannot waste our time in listening to any one who does not accept the ordinary *data* of the subject.'

Now this is precisely the position I propose to take with reference to the theories of the "Circle-Squarers," under which term I include all who have attempted to give an *exact* value to the area of a circle, expressed in terms of the square on its radius. The mathematical world are agreed that it is somewhere very near 3.14159 times that square—so near, indeed, that the above number is too small to express it, while 3.1416 is too great. Any one, then, who should suggest the theory that it was a little more or less than this number, say 3.14161 or 3.14158, might perhaps find listeners: but what would be said to a theorist who proposed to prove it to be $4\frac{1}{2}$? "My good sir," we should exclaim, "if there is one fact in Geometry more certain than another, it is that the area of a circle is less than its circumscribed square and greater than its inscribed square; and that these two squares are respectively four times, and twice, the square of the radius. To go outside these limits is simply absurd. We cannot waste our time in listening to any one who does not accept the ordinary *data* of the subject."

For any Circle-Squarer, then, whose theory is that the area of a circle is more than four times, or less than twice, the square on its radius, what has been already said would be amply sufficient, and this little book would not need to be written. But the numbers proposed are in no case so wide of the mark as this; and if an answer of this kind is to be given to their proposers, the limits fixed must be very much closer together than the numbers 4 and 2.

And this, it has occurred to me, it is possible to do, without using more than the very simplest facts in Mathematics—facts to dispute which would be much the same thing as to deny that two and two make four. To measure the area of the circle itself is a complicated matter, and the processes, by which the value 3.14159 has been calculated, are long and abstruse: and any Circle-Squarer, if called upon to disprove the results so obtained, before he can expect a hearing for his rival theory, might very reasonably reply, "As a mere question of wasting time, it is much more reasonable that *you* should give a few minutes to examining my Theorem, and to disproving it if you can, than that *I* should spend months, or even years, in mastering these difficult calculations."

"Why not, then," it may be asked me, "content yourself with simply *disproving* the Theorem of each Circle-Squarer you meet with? Their proofs are usually short: they seldom go beyond the range of elementary Geometry: and

being, as we know they must be, untrue, they no doubt contain palpable logical fallacies.”

That is all very true: but, in the first place, the *disproof* of his pet Theorem is precisely the very last fact in the world that a Circle-Squarer can be got even to listen to with patience: long contemplation of the result of his labours has made him as sure of its truth as of his own existence: and, in the second place, this would require a fresh argument to be composed for every fresh Circle-Squarer, instead of having, when I hope this little book will furnish, an answer equally applicable to all comers.

The course I propose to take is briefly this:—first, to give a list of the elementary truths I shall afterwards have occasion to quote: then to prove, by very simple methods (in which I shall make no attempt at measuring the *circle* at all, but shall merely measure certain *rectilinear figures* drawn within it and outside it), that, whatever be the *exact* value of the area, it is at any rate less than 3.1417 times, and greater than 3.1413 times, the square on its radius.

Hence, for any Circle-Squarer, whose value for this area lies outside these two limits, this little book will I hope be a sufficient answer. He cannot plead that the proofs here offered are too long, or too abstruse, for him to understand them: and he may fairly be called upon to disprove the truth of the above-named limits, before he can expect a hearing for a theorem which contradicts the opinion of most of the world. If he should take exception to any one of the preliminary truths here quoted, he is of course out of court at once, as they stand on the same footing as the fact that two and two are four: further discussion would be absolute waste of time. If, however, he accepts these preliminary truths, he cannot well avoid being led on, by irresistible logic, to accept the truth of the above-named limits. The method, by which they are obtained, is one that he can easily carry further for himself, and find new pairs of limits, each pair closer together than the preceding pair: so that, even if he has adopted a value a little within the limits 3.1417 and 3.1413, he may still find limits which will exclude the possibility of his value being true.

The exact value of π (the name usually given to “the ratio which the area of a circle bears to the square on its radius”) has in all ages proved an *ignis fatuus*, that has led hundreds, if not thousands, of hapless mathematicians to waste valuable years in the hope of immortalizing themselves by discovering what has been so long sought in vain. I cherish the hope that this little book may fall into the hands of some who have been dazzled by its mocking light, and may prove the means of saving to them much time and labour that would otherwise be wasted.

There is also a proof sheet with two propositions. It has many annotations, indicating that the text would have been more or less completely re-written before publication. Therefore this proof sheet is not included here. The first proposition proves $2 < \pi < 4$, the second $2\frac{2}{3} < \pi < 3\frac{1}{3}$. The second relies on $\frac{\pi}{4} = \tan^{-1} \frac{1}{2} + \tan^{-1} \frac{1}{3}$ with a geometric proof for (quite rough) limits of \tan^{-1} and allows for generalisations in the way of Question 11530 in the *Educational Times* (\rightarrow 9.18, p. 1463), though much better limits are required to get the precision aimed at.

19.23 The Game of Logic

Source: The Game of Logic (edition from 1886 with minor differences as noted)

Nota Bene

With each copy of this Book is given an Envelope, containing a diagram (similar to the frontispiece) on card, and nine Counters, four red and five grey.

The Envelope, &c. can be had separately, at 3*d.* each.

⌋The Author will be very grateful for suggestions, especially from beginners in Logic, of any alterations, or further explanations, that may seem desirable. Letters should be addressed to him at “29, Bedford Street, Covent Garden, London.”¹

Preface

“There foam’d rebellious Logic, gagg’d and bound.”

Quoted from *The Dunciad* by Alexander Pope

This Game requires nine Counters—four of one colour and five of another: say four red and five grey.

Besides the nine Counters, it also requires one Player, *at least*. I am not aware of any Game that can be played with *less* than this number: while there are several that require *more*: take Cricket, for instance, which requires twenty-two. How much easier it is, when you want to play a Game, to find *one* Player than twenty-two! At the same time, though one Player is enough, a good deal more amusement may be got by two working at it together, and correcting each other’s mistakes.

A second advantage, possessed by this Game, is that, besides being an endless source of amusement (the number of arguments, that may be worked by it, being infinite), it will give the Players a little instruction as well. But is there any great harm in *that*, so long as you get plenty of amusement?

19.24 A Fascinating Mental Recreation for the Young

Source: printed 1896, here the earliest published variant (with minor differences as noted) and latest variant

Symbolic Logic by Lewis Carroll. Part I. Elementary

29, Bedford Street, Strand
May, 1896.¹

Dear Madam, or Sir,

Any one, who has to superintend the education of young people (say between 12 and 20 years of age), must have realised the importance of supplying them with healthy mental recreations, to occupy times when both brain and muscles have done their fair share of work for the day. The best possible resource, no doubt, is *reading*; and a taste for reading is quite the most valuable acquirement you can give to your pupil. But *variety* is essential, and many a boy or girl is glad to exchange the merely *passive* enjoyment of reading a book for something which will employ the *hands* as well as the *eyes*, and which will call out some form of mental *activity*. Under this heading may be reckoned such occupations as drawing, painting, &c., and sedentary games, such as chess, backgammon, &c.: also (what many young people keenly enjoy) the guessing of puzzles, which generally involves a certain amount of *handiwork*. And all games and puzzles (excepting of course *whist*) allow, and even encourage, *talking*—which in itself is one of the best and healthiest of mental recreations. Also many of them (and this is a most valuable property) will only yield the *full* enjoyment, that is to be got out of them, in return for a certain amount of *painstaking*. The chess-player, who has learned the true meaning of “*whatsoever thy hand findeth to do, do it with thy might*,” and who gives his full attention to the game, and tries to find the *best* solution for the problems that arise in it, will get *ten* times the enjoyment received by the languid, indolent player, who moves the pieces almost at random, and takes no interest whatever in winning or losing.

Quoted from
Ecclesiastes 9:10

I claim, for Symbolic Logic, a very high place among recreations that have the nature of games or puzzles; and I believe that any one, who will really *try* to understand it, will find it more interesting and more absorbing than most of the games or puzzles yet invented. The reading of the *book* about it is a *very* small part of the business: the *real* occupation and the *real* enjoyment come when the reader has gained the power of solving for himself the fascinating *problems* of the Science. And this power is far sooner, and far more easily, acquired in *Symbolic Logic* than it is in the Science as taught in the ordinary text-books.

The occupation, of solving such problems, furnishes keen and inexhaustible enjoyment, even for the *solitary* student. But a still greater amount of pleasure may be obtained, when two or three students, of tolerably equal powers, agree to work it *together*. It adds enormously to one’s interest in such problems, to be able to *talk* them over with another: and the help it gives, in getting one’s own ideas *clear* on the subject, is simply invaluable.

¹29 Bedford Street,
Covent Garden,
January, 1896.

Symbolic Logic has one *unique* feature, as compared with games and puzzles, which entitles it, I hold, to rank above them all. The accomplished backgammon player has received, no doubt, a great deal of enjoyment, well worth the winning, in the process of making himself a good player; but, when that object is attained, it is of no *further* use to him, except for the one purpose of playing more games, and winning more victories, and possibly becoming the Champion-player for his town or county. Now the accomplished *Logician* has not only enjoyed himself, all the time he was working up to that position, fully as much as the Champion-player has done; but he finds himself, when that position is won, the holder of an "Open Sesame!" to an inexhaustible treasure-house of varied interests. He may apply his skill to any and every subject of human thought; in every one of them it will help him to get *clear* ideas, to make *orderly* arrangement of his knowledge, and, more important than all, to detect and unravel the *fallacies* he will meet with in every subject he may interest himself in.

Quoted from *Ali Baba and the Forty Thieves*

Among the popular ideas about Logic there are *three* special and most fallacious ones² which have prevented its receiving anything like the attention which it deserves.

One is, that it is much too hard for average intellects; that only the exceptionally-gifted can make anything of it; and that it is *quite* beyond the reach of children.

Another is that even those, who *do* succeed in mastering its principles, find it hopelessly dry and uninteresting.

And a third objection is that its results are absolutely and entirely *useless*, and have no connection with the actual facts of life.³

The first two objections may fairly be urged, I think, against *Formal* Logic. Some of the text-books of this Science might almost have been composed with the benevolent intention of furnishing, for the eager minds of children, the *hardest* work that could be devised—giving the *maximum* of fatigue with the *minimum* of result. As compared with *Symbolic* Logic, it is much as if a schoolmaster were to close his cricket-ground, and erect a *treadmill* for his boys instead!

Think of some complicated algebraical problem, which, if worked out with *x*, *y*, *z*, would require the construction of several intricate simultaneous equations, ending in an affected quadratic. Then imagine the misery of having to solve it in *words* only, and being forbidden the use of *symbols*. This will give you a very fair idea of the difference, in solving a Syllogism or Sorites, between the use of *Symbolic* Logic, and of *Formal* Logic as taught in the ordinary text-books.

As to the *first* popular idea—that Logic is much too hard for ordinary folk, and specially for children, I can only say that I have taught the method of Symbolic Logic to *many* children, with entire success. They learn it easily, and take *real* interest in it. High-School girls take to it readily. I have had classes of such girls, and also of the *mistresses*, who are of course yet more interesting pupils to deal with. When your little boys, or little girls, can solve *Syllogisms*, I fancy they will be much more eager to have fresh *Pairs of Premises* supplied them, than any *riddles* you can offer them!

As to Symbolic Logic being *dry*, and *uninteresting*, I can only say, *try* it! I have amused myself with various scientific pursuits for some forty years, and

²special ones

³These two charges seem to dispose of its claim to be regarded as a *Recreation*. And if, abandoning this claim, it demands our attention as a *Science*, it must of course offer us something of practical *use*, to repay us for the trouble of studying it. And here comes in the *third* of these popular ideas, viz., that its results are absolutely and entirely *useless*.

have found none to rival it for sustained and entrancing attractiveness.

As to its being *useless*, I think I have already said enough.

In conclusion, let me point out that even those, who are obliged to study *Formal Logic*, with a view to being able to answer Examination-Papers in that subject, will find the study of *Symbolic Logic* most helpful for this purpose, in throwing light upon many of the obscurities with which Formal Logic abounds, and in furnishing a delightfully easy method of *testing* the results arrived at by the cumbrous process which Formal Logic enforces upon its votaries.⁷⁴

This is, I believe, the very first attempt (with the exception of my own little book, *The Game of Logic*, published in 1886, a very incomplete performance) that has been made to *popularise* this fascinating subject. It has cost me *years* of hard work: but if it should prove, as I hope it may, to be of *real* service to the young, and to be taken up, in High Schools and in private families, as a valuable addition to their stock of healthful mental recreations, such a result would more than repay ten times the labour that I have expended on it. *Your obedient servant,*

Lewis Carroll⁷⁵

N.B. Books to be Given Away.⁷⁶

(1) For Village-Libraries, &c.

Mr. Lewis Carroll will be glad to receive applications for copies of the following books:—

Through the Looking-Glass In the Sixtieth Thousand of this book, some of the pictures came out too black for good artistic effect, and Mr. Carroll decided to *give* the whole of them away, as they were not good enough to *sell*. There are still some on hand, which he will be glad to give for the use of Village-Libraries, &c., or to lend to *invalids*.

The Nursery Alice In one impression of this book some of the pictures are too bright and gaudy, and these also Mr. Carroll has decided to *give* away, for the use of Kinder-Garten, or Infant Schools, or to lend to sick children.

Sylvie and Bruno: Sylvie and Bruno (Concluded) These books are on sale, but the price (which he cannot afford to reduce) puts them beyond the reach of people with small means. He will be glad to *give* some copies for Village-Libraries, &c., or for reading aloud to children, or for lending to invalids.

Every application, for copies of the above, should be signed by some resident householder, and should contain a promise that the books shall be used for the purposes intended.

Applications should be addressed to Messrs. Macmillan and Co. Ltd., 29, Bedford Street, Covent Garden, and should contain stamps to cover the cost of postage, viz., for each separate volume $4\frac{1}{2}d.$; for two volumes $6d.$; for three $9d.$; for the four volumes in one packet $10\frac{1}{2}d.$

⁴Paragraph missing in version from January.

⁵The version from January is followed by: "P.S.—The book is nearly all in type, and will, I *hope*, be ready for delivery before the end of January."

⁶only in version from January

(2) For Sick Children Only.

Mr. Lewis Carroll has had special editions prepared, for this purpose, of "Alice in Wonderland" and "Through the Looking-Glass," and has already given away hundreds of them to Hospitals, Homes, &c.

Applications, from Hospitals, &c., for these books, or for "The Nursery Alice" named above, should be addressed to himself, care of Messrs. Macmillan and Co. Ltd., and should be signed by some official of the Hospital, &c., and should state the number of children, capable of enjoying such books, who are there at once, the number of copies in hand, and also whether it possesses any funds with which such books could be purchased.

January, 1896.

19.25 Symbolic Logic

Advertisement.

Source: Symbolic Logic, fourth edition, first, second and third edition with minor differences as noted

└An envelope, containing two blank Diagrams (Bilateral and Trilateral) and 9 counters (4 Red and 5 Grey), may be had, from Messrs. Macmillan, for 3*d.*, by post 4*d.*¹

I shall be grateful to any Reader └of this book² who will point out any mistakes or misprints he may happen to notice └in it,³ or any passage which he thinks is not clearly expressed.

I have a quantity of MS. on hand for Parts II and III, and hope to be able—
—should life, and health, and opportunity, be granted to me, to publish them in the course of the next few years. Their contents will be as follows:—

Part II. Advanced.

Further investigations in the subjects of Part I. Propositions of other forms (such as “Not-all x are y ”). Trilateral and Multilateral Propositions (such as “All abc are de ”). Hypotheticals. └Dilemmas.⁴ &c. &c.

Part III. Transcendental.

Analysis of a Proposition into its Elements. Numerical and Geometrical Problems. └The Theory of Inference. The Construction of Problems.⁵ And many other *Curiosa Logica*.

└It will greatly assist me in composing these two Parts, if my Readers will send me any good examples of Fallacies that they may chance to meet with, or any out-of-the-way Problems, Dilemmas, or other Puzzles in Logic.⁶

P.S.

└I take this opportunity of giving what publicity I can to my contradiction of a silly story, which has been going the round of the papers, about my having presented certain books to Her Majesty the Queen. It is so constantly repeated, and is such absolute fiction, that I think it worth while to state, once for all, that it is utterly false in every particular: nothing even resembling it has ever occurred.⁷

Preface to the Fourth Edition.

Source: Symbolic Logic, fourth edition, second edition as “Preface to the Second Edition” with minor differences as noted, third edition as “Preface to the Third Edition” with minor differences as noted

The chief alterations, since the First Edition,⁷⁸ have been made in the Chapter on ‘Classification’ (p. 1044) and the Book⁷⁹ on ‘Propositions’⁷¹⁰ (pp. 1049 to 1049). The chief additions have been the questions on words and phrases, added to the Examination-Papers at p. 1098, and the Notes inserted at pp. 1145, 1173.⁷¹¹

In Book I, Chapter II,⁷¹² I have adopted a new definition of ‘Classification’,⁷¹³ which enables me to regard the whole Universe as a ‘Class,’ and thus to dispense with the very awkward phrase ‘a Set of Things.’

In the Chapter on ‘Propositions of Existence’⁷¹⁴ I have adopted a new ‘normal form,’ in which the Class, whose existence is affirmed or denied, is regarded as the *Predicate*, instead of the *Subject*, of the Proposition, thus evading a very subtle difficulty which besets the other form. These subtle difficulties seem to lie at the root of every Tree of Knowledge, and they are *far* more hopeless to grapple with than any that occur in its higher branches. For example, the difficulties of the Forty-Seventh Proposition of Euclid are mere child’s play compared with the mental torture endured in the effort to think out the essential nature of a straight Line. And, in the present work, the difficulties of the “5 Liars” Problem, at p. 1171, are “trifles, light as air,” compared with the bewildering question “What is a Thing?”⁷¹⁵

In the Chapter on ‘Propositions of Relation’ I have inserted a new Section, containing the proof that a Proposition, beginning with “All,” is a *Double Proposition* (a fact that is quite independent of the arbitrary rule, laid down in the next Section, that such a Proposition is to be understood as implying the actual *existence* of its Subject). This proof was given, in the earlier editions, incidentally, in the course of the discussion of the Biliteral Diagram: but its *proper* place, in this treatise, is where I have now introduced it.

In the Sorites-Examples, I have made a good many verbal alterations, in order to evade a difficulty, which I fear will have perplexed some of the Readers of the first three Editions. Some of the Premisses were so worded that their Terms were not Specieses of the Univ. named in the Dictionary, but of a larger Class, of which the Univ. was only a portion. In all such cases, it was intended that the Reader should perceive that what was asserted of the larger Class was thereby asserted of the Univ., and should ignore, as superfluous, all that it asserted of its *other* portion. Thus, in Ex. 15, the Univ. was stated to be “ducks in this village,” and the third Premiss was “Mrs. Bond has no gray ducks,” i. e. “No gray ducks are ducks belonging to Mrs. Bond.” Here the Terms are *not*

⁸“in this Edition” in the second edition

⁹“Chapter” in the second edition

¹⁰“Propositions of Existence” in the second edition

¹¹Missing in second edition.

¹²“In the first of these” in the second edition, “In the Chapter on ‘Classification’” in the third edition

¹³the Process

¹⁴“In the second” in the second edition

¹⁵Second and third edition differs from here, see below.

Specieses of the Univ., but of the larger Class “ducks,” of which the Univ. is only a portion: and it was intended that the Reader should perceive that what is here asserted of “ducks” is thereby asserted of “ducks in this village.” and should treat this Premiss as if it were “Mrs. Bond has no gray ducks in this village,” and should ignore, as superfluous, what it asserts as to the *other* portion of the Class “ducks,” viz. “Mrs. Bond has no gray ducks *out of* this village”.

In the Appendix I have given a new version of the Problem of the “Five Liars.” My object, in doing so, is to escape the subtle and mysterious difficulties which beset all attempts at regarding a Proposition as being its own Subject, or a Set of Propositions as being Subjects for one another. It is certainly, a most bewildering and unsatisfactory theory: one cannot help feeling that there is a great lack of *substance* in all this shadowy host—that, as the procession of phantoms glides before us, there is not *one* that we can pounce upon, and say “*Here* is a Proposition that *must* be either true or false!”—that it is but a Barmecide Feast, to which we have been bidden—and that its prototype is to be found in that mythical island, whose inhabitants “earned a precarious living by taking in each others’ washing”! By simply translating “telling 2 Truths” into “taking *both* of 2 condiments (salt and mustard),” “telling 2 Lies” into “taking *neither* of them” and “telling a Truth and a Lie (order not specified)” into “taking only *one* condiment (it is not specified *which*),” I have escaped all those metaphysical puzzles, and have produced a Problem which, when translated into a Set of symbolized Premisses, furnishes the very same *Data* as were furnished by the Problem of the “Five Liars.”

The coined words, introduced in previous editions, such as “Eliminands” and “Retinends”, perhaps hardly need any apology: they were indispensable to my system: but the new plural, here used for the first time, viz. “Soriteses”, will, I fear, be condemned as “bad English”, unless I say a word in its defence. We have *three* singular nouns, in English, of plural *form*, “series”, “species”, and “Sorites”: in all three, the awkwardness, of using the same word for both singular and plural, must often have been felt: this has been remedied, in the case of “series” by coining the plural “serieses”, which has already found its way into the dictionaries: so I am no rash innovator, but am merely “following suit”, in using the new plural “Soriteses”.

In conclusion,¹⁶ let me point out that even those, who are obliged to study *Formal Logic*, with a view to being able to answer Examination-Papers in that subject, will find the study of *Symbolic Logic* most helpful for this purpose, in throwing light upon many of the obscurities with which Formal Logic abounds, and in furnishing a delightfully easy method of *testing* the results arrived at by the cumbrous processes which Formal Logic enforces upon its votaries.

This is, I believe, the very first attempt (with the exception of my own little book, *The Game of Logic*, published in 1886, a very incomplete performance) that has been made to *popularise* this fascinating subject. It has cost me *years* of hard work: but if it should prove, as I hope it may, to be of *real* service to the young, and to be taken up, in High Schools and in private families, as a valuable addition to their stock of healthful mental recreations, such a result would more than repay ten times the labour that I have expended on it.

„Christmas, 1896.“¹⁷

Preface to the Second Edition

...

Besides these alterations, I have corrected a number of misprints, some of which have been pointed out to me by friends—but none of my critics have been sharp-eyed enough to detect the splendid misprint at p. 1113, where the following Trio of Propositions is proposed as a Syllogism:—

“A prudent man shuns hyænas;
Anything but gold will fail to silence him.
No banker fails to shun hyænas.”

Kind friends have tried their best, with a really touching confidence in the infallibility of author and printer, to make sense of this hopeless jumble; and no suspicion has crossed their innocent minds (“For they suspected harm from none, They were themselves so good”) that the second Premiss has wandered in here from the opposite page, and has displaced the lawful occupant, viz. “No banker is imprudent.”

„Lastly, I have corrected one terrible mistake of my own, pointed out to me by a logical friend, who wrote that he had twice worked out the “5 Liars” Problem, and brought out the result “no solution.” And it was even so, I had to confess (of course in the appropriate attitude, prostrate, prone, and with ashes on my head). However, by transposing two words, I have set things right, and can now guarantee, to any Reader bold enough to attempt the Problem, that there *is* a solution, if only he can find it!“¹⁸

...

Introduction

Source: Symbolic Logic, second and fourth edition, first edition with minor differences

To Learners.

[N.B. Some remarks, addressed to *Teachers*, will be found in the Appendix, at p. 1146.]

The Learner, who wishes to try the question *fairly*, whether this little book does, or does not, supply the materials for a most interesting mental recreation, is *earnestly* advised to adopt the following Rules:—

(1) Begin at the *beginning*, and do not allow yourself to gratify a mere idle curiosity by dipping into the book, here and there. This would very likely lead to your throwing it aside, with the remark “This is *much* too hard for me!”, and thus losing the chance of adding a very *large* item to your stock of mental delights. This Rule (of not *dipping*) is very *desirable* with *other* kinds of books—such as novels, for instance, where you may easily spoil much of the

¹⁷“May 11, 1896.” in the second edition, “July 20, 1896.” in the third edition

¹⁸This paragraph is missing in the third edition.

enjoyment you would otherwise get from the story, by dipping into it further on, so that what the author meant to be a pleasant surprise comes to you as a matter of course. Some people, I know, make a practice of looking into Vol. III first, just to see how the story ends: and perhaps it *is* as well just to know that all ends *happily*—that the much-persecuted lovers *do* marry after all, that he is proved to be quite innocent of the murder, that the wicked cousin is completely foiled in his plot and gets the punishment he deserves, and that the rich uncle in India (*Qu. Why in India? Ans. Because, somehow, uncles never can get rich anywhere else*) dies at exactly the right moment—before taking the trouble to read Vol. I. This, I say, is *just* permissible with a *novel*, where Vol. III has a *meaning*, even for those who have not read the earlier part of the story; but, with a *scientific* book, it is sheer insanity: you will find the latter part *hopelessly* unintelligible, if you read it before reaching it in regular course.

(2) Don't begin any fresh Chapter, or Section, until you are certain that you *thoroughly* understand the whole book *up to that point*, and that you have worked, correctly, most if not all of the examples which have been set. So long as you are conscious that all the land you have passed through is absolutely *conquered*, and that you are leaving no unsolved difficulties *behind* you, which will be sure to turn up again later on, your triumphal progress will be easy and delightful. Otherwise, you will find your state of puzzlement get worse and worse as you proceed, till you give up the whole thing in utter disgust.

(3) When you come to any passage you don't understand, *read it again*: if you *still* don't understand it, *read it again*: if you fail, even after *three* readings, very likely your brain is getting a little tired. In that case, put the book away, and take to other occupations, and next day, when you come to it fresh, you will very likely find that it is *quite* easy.

(4) If possible, find some genial friend, who will read the book along with you, and will talk over the difficulties with you. *Talking* is a wonderful smoother-over of difficulties. When *I* come upon anything—in Logic or in any other hard subject—that entirely puzzles me, I find it a capital plan to talk it over, *aloud*, even when I am all alone. One can explain things so *clearly* to one's self! And then, you know, one is so *patient* with one's self: one *never* gets irritated at one's own stupidity!

If, dear Reader, you will faithfully observe these Rules, and so give my little book a really *fair* trial, I promise you, most confidently, that you will find Symbolic Logic to be one of the most, if not *the* most, fascinating of mental recreations! In this First Part, I have carefully avoided all difficulties which seemed to me to be beyond the grasp of an intelligent child of (say) twelve or fourteen years of age. I have myself taught most of its contents, *vivâ voce*, to *many* children, and have found them take a real intelligent interest in the subject. For those, who succeed in mastering Part I, and who begin, like Oliver, "asking for more," I hope to provide, in Part II, some *tolerably* hard nuts to crack—nuts that will require all the nut-crackers they happen to possess!

Mental recreation is a thing that we all of us need for our mental health; and you may get much healthy enjoyment, no doubt, from Games, such as Backgammon, Chess, and the new Game "Halma". But, after all, when you have made yourself a first-rate player at any one of these Games, you have nothing real to *show* for it, as a *result*! You enjoyed the Game, and the victory, no doubt, *at the time*: but you have no *result* that you can treasure up and get real *good* out of. And, all the while, you have been leaving unexplored a perfect

mine of wealth. Once master the machinery of Symbolic Logic, and you have a mental occupation always at hand, of absorbing interest, and one that will be of real *use* to you in *any* subject you may take up. It will give you clearness of thought—the ability to *see your way* through a puzzle—the habit of arranging your ideas in an orderly and get-at-able form—and, more valuable than all, the power to detect *fallacies*, and to tear to pieces the flimsy illogical arguments, which you will so continually encounter in books, in newspapers, in speeches, and even in sermons, and which so easily delude those who have never taken the trouble to master this fascinating Art. *Try it.* That is all I ask of you!

L. C.

19.26 An Index to “In Memoriam”

Source: An Index to “In Memoriam”

The principle adopted in this Index is that of referring to each clause under the heading of the most important noun contained in it. Where a clause contains two or more nouns of equal importance, it is referred to under each; and where it contains no nouns, recourse is had to the most important word in it, preference being given to verbs.

The references have been made to sonnets and stanzas rather than to pages and lines, in order that the Index may be equally applicable to different editions of the Poem.

This Index was originally begun for the use of the Compilers, who had found that, in so long a poem, it was difficult to refer readily to passages of which fragments only were remembered. It is now published, with the Poet’s kind permission, in the hope that it may prove of like service to others.

As a specimen, the first entry under “A” is shown here.

	Son.	Stan.	
Index.			ABIDE (<i>verb</i>)
	57.	3.	A. a little longer here
	124.	4.	<i>Abiding</i> with me till I sail

19.27 Notice re Concordance to ‘In Memoriam’

Source: probably printed 1881, also added to advertisements

This was published in 1862, and is adapted to all editions in which the Poem consists of 130 sections. About the year 1870, a new section was introduced as No. 39; for all subsequent editions, the Index may be used equally well, by simply adding “1” to every sectional number above “38.”

19.28 Syzygies and Lanrick

Source: Syzygies and Lanrick

This pamphlet is a portion of a volume, now in preparation, of original Games and Puzzles: it is published in this form, for the convenience of readers of "*The Lady*," with a view to the possibility of another Syzygy-Tournament being started in that Paper.

I have proved, by experiment, that the Puzzle of "Syzygies" is also available as a Game for two Players, and that it is well adapted to relieve the tedium of a railway-journey; since it involves no *reading* (so tiring to the eyes of travelers) or *talking* (so tiring to their voices and ears). The only materials needed are writing-materials—say a couple of memorandum-books. Each Player thinks of a good long word, the longer the better. When *she* has thought of *hers* (I assume the two travelers to be a 'he' and a 'she,' and that 'she' is the quicker thinker) she says 'Ready!': then, when *he* has thought of *his*, the two words are announced, watches are consulted, and the Game begins, each Player trying to make a 'Chain' to connect the two words. At the end of ten minutes (or whatever period they like to fix) the Chains are exchanged and examined, and the scores recorded. Then they think of another couple of words; and so on. Whichever first scores 100, wins: or, if both score it, the highest score wins.

I have taken this opportunity to publish the Rules for "Lanrick," in order to make this game known rather sooner than it would otherwise be, and with the hope of receiving criticisms on it, so as to render it as perfect as possible when published in the volume. Not that *much* increase in perfection can now be hoped for, as the first version of the Rules was written on Dec. 26, 1878, and I have been improving them, off and on, ever since! Every change in the rules has necessitated the playing of several games, to see how it worked.

The chief novelty of this Game—the attempt to play all the men on the Board into a set of squares, whose number is less than that of the men—was suggested to me by the well-known game for children, "Musical Chairs," where the number of chairs is one less than that of the children trying to occupy them. Mine is, I believe, the first attempt to introduce this principle into a game of skill.

Also Rule 5, on p. 1597, was suggested to me by the common expedient, practised by school-boys, for securing a fair division of a cake or an apple, namely "one cuts, the other chooses."

The name "Lanrick" was suggested by a passage in "The Lady of the Lake," where Roderick Dhu, when summoning his clan to the appointed rendezvous, says

"The muster place be Lanrick mead—
Instant the time—speed, Malise, speed!"

19.29 Introduction to “The Lost Plum Cake”

Source: E. G. Wilcox: *The Lost Plum Cake* (1897)

The writer of the Introduction to a book, who is *not* himself the author of the book, enjoys one singular privilege—he can discuss its merits with a freedom that very few authors would venture to use: since, however sweet the “blowing one’s own trumpet” may sound to the enraptured trumpeter, it is apt to pall on other ears. Let me, then, avail myself of this privilege by saying that I believe Mrs. Egerton Allen has a very special talent for writing books for very young children. Her dialogues have all the vividness of a photograph; and I feel sure that all *real* children—children who have not been spoiled by too much notice, and thus taught to give themselves the airs of little men and women—will like to read the story of tiny “Joey,” and will enjoy the clever and sympathetic sketches with which Mrs. Shute has adorned it. It is, I think, a real loss to the thousands of child-readers, for whom so many charming books have been written, that Mrs. Allen’s first little book—“Little Humphrey’s Adventure”—has been allowed by the Publishers, who hold the copyright of it, to go out of print. It is a *thorough* child’s book, and I trust the S.P.C.K. may ere long see their way to issuing another edition of it.

But the writer of this Introduction is not alone in his good fortune: the *reader* of this little book has *also* a singular privilege at his command, in connection with the *cover*, which was designed for it by Miss E. Gertrude Thomson. Holding the book at the middle point of each side, and turn it about till the light (which should come from *behind* him) causes what look like little hills on the red cover to glitter, he can then fidget it about—he will soon catch the knack—till the gold ornamentation seems to lift itself a good half-inch off the cover; and he can easily persuade his *eye*, if not his intellect, to believe that, in turning the book about, he is causing the gold to cover now one part of the red and now another. It is a really curious optical illusion.

Let me seize this opportunity of saying one earnest word to the mothers into whose hands this little book may chance to come, who are in the habit of taking their children to church with them. However well and reverently those dear little ones have been taught to behave, there is no doubt that so long a period of enforced quietude is a severe tax on their patience. The hymns, perhaps, tax it least: and what a pathetic beauty there is in the sweet fresh voices of the children, and how earnestly they sing! I took a little girl of six to church with me one day: they had told me she could hardly read at all—but she made me find all her places for her! And afterwards I said to her elder sister, “What made you say Barbara couldn’t read? Why, I heard her joining in, all through the hymn!” And the little sister gravely replied, “She knows the *tunes*, but not the *words*.” Well, to return to my subject—children in church. The lessons and the prayers, are not wholly beyond them: often they can catch little bits that come within the range of their small minds. But the sermons! It goes to one’s heart to see, as I so often do, little darlings of five or six years old, forced to sit still through a weary half-hour, with nothing to do, and not one word of sermon that they can understand. Most heartily can I sympathise with the little charity-girl, who is said to have written to some friend, “I think, when I grows up, I’ll never go to church no more. I think I’s getting sermons enough to last me all my life!” But need it be so? Would it be so *very* irreverent to let your child have a story-book

to read during the sermon, to while away that tedious half-hour, and to make church-going a bright and happy memory, instead of rousing the thought "I'll never go to church no more?" I think not. For my part, I should love to see the experiment tried. I am quite sure it would be a success. My advice would be to *keep* some books for that special purpose—I would call such books "Sunday-treats"—and your little boy or girl would soon learn to look forward with eager hope to that half-hour, once so tedious. If I were the preacher, dealing with some subject too hard for the little ones, I should love to see them all enjoying their picture-books. And if *this* little book should ever come to be used as a "Sunday-treat" for some sweet baby-reader, I don't think it could serve a better purpose.

Reasonings on Rubbish

“Aye, there’s the rub!” Shakespeare.

Quoted from *Hamlet*
by William
Shakespeare

The beginning of a new periodical is always an anxious moment for the editor: the question naturally suggests itself, “What if it should fail altogether?” This, however is a fate which, we must confess, we do not by any means anticipate for this Magazine. We look forwards with confident prospection to the time when, teeming with the voluntary productions of the most gifted and talented authors and authoresses of this country, the Rectory Magazine shall draw from admiring thousands their unanimous and uncalled for plaudits! when it shall become one of the staple and essential portions of the literature of England, when infants shall lisp their first spelling-lessons out of “Reasonings on Rubbish”! “But you are wandering from your subject!” methinks I hear some fidgetty reader exclaim. We question that, good Reader: have we not been writing about our Magazine? and is it not, to all intents and purposes, Rubbish? yea veritable and unmitigated Rubbish. We would, however, make a few remarks, in the capacity of Editor. Many obliging contributors have favoured us with stories &c. in many of which a considerable amount of talent is displayed: these are, with small exception, decidedly of a juvenile cast, and we would observe that this Magazine is far from being *exclusively* intended for Juvenile Readers. We have therefore been compelled, with considerable pain, to reject many of them, being well asured, from what we have already seen, that their authors are perfectly competent to contribute productions of a far more aspiring nature. We would again earnestly request more assistance, otherwise we regret to state that our Magazine will inevitably die out, like an un-replenished fire.

Editor.

Thoughts on Thistles

How strange and unexpected are many of the events of life! I who in bygone years pictured to myself many a pleasing dream of future greatness, when I should be admired and sought after by all my countrymen; when monarchs should condescend to employ me, and thousands should lie prostrate at my feet; when I should tread upon flowers and gorgeous satin drapery; when my trappings should be of gold and silver, and my saddle of the richest morocco; when my food should be the choicest Indian corn, awaiting me in mangers of satin-wood—I who indulged in these delicious speculations in former days, am now browsing upon a thistle! Ah well! The vicissitudes of life are various, (as the Great Chinese philosopher, Confucious, was once heard to mutter to himself in an inaudible tone when no one was near) they are very various and there is no calculating upon them! From henceforth therefore I resolve to take events as they occur, to adapt my conduct to circumstances, to endure with fortitude the blows and kicks my employers may think fit to bestow upon me, and only to repay them by the most enduring obstinacy!

Such were the thoughts of an individual of that most patient tribe of animals, a Donkey, as he quietly awaited by the roadside the return of his master with a load of coals. We beg to state without hesitation that we cordially echo them ourselves, and it only remains for us to remark that we do not intend these remarks in any offensive light, that we have no wish to make a Donkey of our reader, however much in the habit he may be of making one of himself.

Editor.

Things in General

"Scarce wert thou gone." Scott.

Quoted from *Rokeby*
by Walter Scott

The question, "What is your opinion of things in general," has been much oftener asked than answered: it has been so long and so constantly bandied about among small wits that we almost fear to write on so trite a subject. It is our intention on the present occasion to attempt something like an answer to this difficult question. We know that whatever we can see, handle, or think about is a thing, and if the question were confined to some particular thing, as, "What is your opinion of yesterday's gooseberry pudding?" or, "What is your opinion of my new hat?" we could answer, "Never saw a worser," or "A shocking bad 'un," as the case might be, with the utmost confidence and readiness, but the case is changed when the question is indefinitely extended, for our opinions of different things are of course as different as the things themselves, and it would seem impossible to combine all these in one. If the question had been, "What *are* your *opinions* of things in general?" an answer might be given, but it would take volumes to express it. After mature consideration, the only way we can see out of this difficulty is this: as it can by no possibility affect or concern the questioner what your opinion may be, the best and most satisfactory answer to the question appears to be, to ask in a stern and reproachful tone of voice, "What's that to you?"

Rust

*“The knights are dust,
'and their good swords rust.”*

Quoted from *The Knight's Tomb* by Samuel Taylor Coleridge

Rubigo, or rust is that sand-coloured powdery covering which appears on iron after exposure to damp; it appears too on various other metals under different names such as verdigris on copper &cc; it never extends beyond a certain depth, and when once formed, it protects the metal underneath, and keeps it from the effects of the atmosphere.

Such is the philosophical definition of rust, and as such, the term is only applicable to metals, but in a metaphorical sense, it's application is more widely extended. Thus ¹there may be a rust of the mind or of the intellect, and there is no fate which we dread more for our magazine than that it should become rusty. We would have it's wheels run smoothly on, the axletrees well oiled by a copious and constant stream of contributions, the dust of stupidity cleared away by the rapidly-moving fan of wit, and all obstacles and impediments removed from it's course by the zeal and attention of it's supporters. And yet, successful as our Magazine has hitherto been, and enthusiastically as it has been received, the fate we have been dreading for it does not seem to be very far distant. We opened our Editor's box this morning, expecting of course to find it overflowing with contributions, and found it—our pen shudders and our ink blushes as we write—empty!

One word more on the nature of rust. As verdigris is a copper oxide &cc. &cc. so rust is usually called an iron

But

“But let us not proceed too furious.” Goldsmith.

Quoted from *A New Simile, in the Manner of Swift* by Oliver Goldsmith

I *would* have a gorgeous and resplendent castle, fitted up in the first style of elegance and grandeur, superb gardens, full of the choicest and rarest flowers,

¹mistakenly “their” in the original

a magnificent and extensive park, stocked with deer, abounding in natural cascades and artificial fountains, with think-foliaged avenues of trees, an enormous library, containing all the books ever printed in the world, I *would* have every pleasure and convenience that wealth can give, *but*—I can't! Alas! reader, how many bright visions, fairy-like castles in the air, have vanished before the all-potent influence of the little monosyllable, *but*! "Brill," as D^r Johnson finely observes, "*brill would* be turbot, *but*—it can't." Napoleon *would* have conquered all the inhabitable world, England included, *but*—he didn't! And we ourselves *would* gladly prolong this learned article to pages and pages, till our reader fell asleep through weariness, *but*—we can't think of anything more to say!

Editor.

Musings on Milk

Marvellously many materials make milk! Much too many to mention. 'Tis morning, and the merry milkmaid, murmuring a melting melody, moves towards the meadow; the majestic cows move meekly to meet their mirthful mistress; now mantles in the moderate milkpail the marble milk; anon mark many minute masters and misses with measureless mouths march to their morning meat of mighty mugs! Marvellest thou not, my reader, how mankind can be so matchlessly mischievous and madly meddlesome as to molest their mild maintainers? My mind misgives me at the memory of many merciless men, who may monthly be marked in our mighty metropolis, like morbid, morbid monsters, mauling and murderously misusing the mild milch cows! Murky misanthropes! Much do they merit manacles! Methinks their manners meelly mimic mouthing moonstruck maniacs! But let us mind more mundane matters. A missive met my manuals this morning from one of the munificent ad-mirers of this Magazine; morally magnificent as it was, we have not ad-mitted it, because it militates much against the manner in which this Magazine is meant to be managed. It made us mournful, and moved us to melancholy misery, even to moaning. Let not our meaning be misunderstood or misinterpreted. The matters ad-mitted *must* be our ad-mirer's *own*. And more, they *must* be new, lest our magazine merge into a monotonous, mouldy mockery of mirth. With these memorable remarks let me conclude this matter, merely mentioning that as this manuscript is a musing (referring) to milk, we mean this Magazine to be, as much as we can make it, a-musing to all mankind!

Editor.

Ideas upon Ink

"There was a time." Thomson.

There was a time, good Reader,—you will hardly believe us, but the fact is true, nevertheless—there was a time when ink was positively unknown, when manuscripts were labouriously scratched on the leaves of the papyrus, or tablets coated with wax: imagine reading the Times on papyrus, with the leaders on the stalks, the advertisements neatly inserted between the fibres, and a double Supplement, (gratis of course) on a handsome Lotus leaf! imagine plodding through a large volume (literally) in boards, with abundance of cuts, but no plates! if you did'n't stick in the middle, it wouldn't be the wax's fault. To be

Quoted from
Britannia by James
Thomson

sure all you read therein would *stick* by you, and you would *wax* daily wiser and wiser, but still I fancy you would be exceedingly *bored* by it. The other way would be even more voluminous, we should hear the street porters crying, "By your leaf, gentlemen, by your leaf, make way for a copy of the Queen's Speech!" We would have you observe, good reader, the many benefits which the discovery of ink has conferred on Society. It has infinitely lightened the labours of both writer and reader: it has lessened the size of volumes, and at the same time made them more legible: it has increased a hundred-fold the literature of England, and it has procured for your delectation and instruction the publication of that inestimable periodical, the Rectory Magazine.

Editor.

Twaddle on Telescopes

"Give ear." Goldsmith.

We would not have you suppose, good reader, that because this is twaddle, it is not worth your while to peruse it. For there are many books which we are well assured you delight to read, which nevertheless are quite as much twaddle as our Magazine. Nay, perhaps even more, for many of them contain no sort of instruction or benefit for their readers, whereas by perusing *our* far-famed columns, you may lay in a certain store of *useful* and *entertaining* knowledge: do not smile at this assertion, we know it by experience; even while we write we feel that we are gradually rising in the scale of moral elevation, every number of the Magazine we publish elevates us two pegs, and, as certainly, elevates the attentive reader three: yes, reader, if you have carefully and with due attention read the seven numbers of this Magazine already out, you have our warrant for it that you are twenty-one pegs higher in the scale of humanity than you were when you began: that this fact admits of no doubt may be satisfactorily proved by the simple multiplication sum, "seven times three is twenty-one": this

Quoted from *An Elegy On The Death Of A Mad Dog* by Oliver Goldsmith

must convince the most sceptical: argue the matter as you will, the stubborn fact remains as before. Facts *are* stubborn things, as Lady M— is reported to have observed to M^r F— at the conclusion of a long and tedious dispute: he is *said* to have replied, “then what a Fact your Ladyship must be!” but we hope for the honour of humanity he did not. We repeat reader that you *are* morally elevated by reading our Magazine let your heart bound at the thought, though to be sure, *that* direction appears to be *somewhat* superflous, for as the motion of the heart are acknowledged by the best anatomists to be involuntary, it will not be in your power to prevent it. And now, reader, if you suppose that we have been wandering from our subject, all we can say is, we pity your want of discernment.

Editor

Cogitations on Conclusions

“But, to conclude.”

And this is to be our last number! and we, whose unceasing occupation for a period of full six months has been the publication of this magazine,—by-the-bye it wasn't *full* six months, because the Editor was at school for five months of the time—and we, are now to give up our labours, and desert the lofty task of instructing & entertaining the public in general! Ah! well! it would somewhat console us at this melancholy moment to see a fit successor fill our place—but there is none! and yet with onward glance we fancy we can discern the coming brightness of some meteor in the skies, what is it? “is that a Comet which I see before me? with tail of boundless length?” Reader, it is. Farewell.

(Editor.)

Quoted from *Second Treatise of Civil Government* by John Locke

19.31 The Rectory Umbrella

Source: The Rectory Umbrella

Preface

We venture once more before the Public, hoping to receive the same indulgence and support which has been hitherto bestowed on our Editorial efforts. Our success in former Magazines¹ has been decided: each has been more admired than its predecessor, and the last, the Comet, has been so universally believed to be the ne plus ultra of magazines, that we believe the only thing which can put an end to the delusion will be the issue of the Umbrella. We now in full confidence enter on our present duties. *Editor.*

¹Viz: the Rectory Magazine and the Rectory Comet. The "R.M." succeeded "Useful and instructive Poetry."

19.32 Mischmasch

Source: Mischmasch

Preface

“Yet once more,” (to use the time-honoured words of our poet Milton,) we present ourselves before an eager and expectant public, let us hope under even better auspices than hitherto.

Quoted from *Lycidas*
by John Milton

In making our bow for the—may we venture to say so?—forth time, it will be worth while to review the past, and to consider the probable future. We are encouraged to do so by Mrs. Malaprop’s advice, “Let us not anticipate the past: let all our retrospections be to the future,” and by the fact that our family motto is “Respiendo prudens.”

We purpose then to give a brief history of our former domestic magazines in this family, their origin, aim, progress, and ultimate fate, and we shall notice, as we go on, the other magazines which have appeared, but not under our own editorship: we commence our history, then, with

Useful and Instructive Poerty

This we wrote ourselves about the year 1845, the idea of the first poem being suggested by a piece in the “Etonian”: it lasted about half a year, and was then very clumsily bound up in a sort of volume: the binding, however, was in every respect worthy of the contents: the volume still exists.

The Rectory Magazine

This was the first started for general contribution, and at first the contributions poured in in one continuous stream, while the issuing of each number was attended by the most violent excitement through the whole house: most of the family contributed one or more articles to it. About the year 1848 the numbers were bound into a volume, which still exists.

The Comet

This was started by us about the year 1848. It was the same shape as the former, but, for the sake of variety, opened at the end instead of the side. Little interest attended this publication, and its contents were so poor, that, after 6 numbers were out, we destroyed all but the last, and published no more. The last number, we believe, is still in existence.

The Rosebud

This was started in imitation of the Comet, but only reached a second number: the cover of each number was tastefully ornamented with a painted rosebud: the two numbers do not contain much worth notice, but are still preserved.

The Star

Another imitator of the Comet, on a less ambitious scale even than the last: the manuscript and illustrations decidedly below par: some half-dozen numbers still survive.

The Will-O'-The-Wisp

Even inferior to the last: the numbers were cut in a triangular shape: we believe some numbers are still to be found.

The Rectory Umbrella

This we started, we believe, in 1849 or 1850, in a ready-bound square volume. It was admired at the time, but wholly unsupported, and it took us a year or more to fill the volume by our own unaided efforts. The volume exists, and in good preservation, and therefore any further account of it is needless.

We will here notice one or two of our own writings, which have seen more extended publicity than the above mentioned. In the summer of 1854 we contributed two poems to the "Oxonian Advertiser," neither at all worth preservation; and in the Long Vacation of the same year, when staying with a reading party at Whitby, we contributed "The Lady of the Ladle" and "Wilhelm von Schmitz," to the weekly Gazette of that place. Both will be found inserted in this volume. From this subject we hasten to the consideration of the present magazine.

Mischmasch

The name is German, and means in English "midge-madge," which we need not inform the intelligent reader is equivalent to "hodge-podge": our intention is to admit articles of every kind, prose, verse, and pictures, provided they reach a sufficiently high standard of merit.

The best of its contents will be offered at intervals to a contemporary magazine of a less exclusively domestic nature: we allude to the "Comic Times"; thus affording to the contributors to this magazine an opportunity of presenting their productions to the admiring gaze of the English Nation.

Croft. Aug: 13. 1855.

Notice to the Public

Source: Mischmasch, including a newspaper cutting from the Whitby Gazette, September 28, 1854

Introduction to *Wilhelm von Schmitz* (→ 3.6, p. 638) and *The Lady of the Ladle* (→ 18.163, p. 2358)

The two following compositions, "Wilhelm von Schmitz" and "The Lady of the Ladle," were originally published in the "Whitby Gazette," a weekly periodical, price one penny: what opinion the Editor of that paper formed of them may be judged from his farewell address, inserted below.

As the scenery and many of the allusions refer to Whitby, the papers may not prove very intellegible to the general reader; still, if they succeed in imparting

one transient glow of satisfaction to the breast of any individual however humble, or in awakening one sickly smile on the countenance of any reader however disreputable, the author's incessant and exhausting toil of sixteen long years will have been abundantly repaid.

The Publisher of the Whitby Gazette in issuing the last number for the first season, gratefully acknowledges its favourable reception, and although he cannot but own that the literary department as a whole, has not been of a high or specially attractive nature, yet the object originally intended has been realized, namely, the publishing of a List of Lodging Houses and Visitors, for the use of the greatly increased number who have sought health and recreation amid the attractions of of this rapidly rising watering place.

Although as a pecuniary speculation the past would not warrant him in promoting its re-appearance, yet, confidently hoping that its usefulness will be more generally owned, he respectfully announces that at the proper season it will again be issued.

Thanks are awarded to those who have taken an interest in its publication and have so kindly furnished materials for its columns, and hopes are entertained that the services of those and other kind friends will again be afforded when the publication is resumed.
